As The Editor Sees It

IN answer to the questions from many cities and communities as to what action may be taken locally to *eliminate unfair trade practices* in the Construction Industry wherever they exist and to bring about a revival of construction activities, the Committee on Construction Development appointed by Secretary Hoover makes the following suggestions as a general basis which may be added to and modified in such ways as the individual community may desire:

As a preface to the statement of suggested plan, the following excerpts are quoted from the official report of the President's Conference on Unemployment, held in Washington, September 26th to October 13th, 1921:

"The greatest area for immediate relief of unemployment is in the construction industry, which has been artificially restricted during and since the war.

There are three outstanding factors in the building and construction situation which have the greatest bearing on the resumption of construction activities. They are *financing, material costs, and labor costs.* These factors present questions which cannot be settled in a national way; they must be investigated by those interested in each community for itself. The questions are:

(a) Can the prospective investor finance the operation *at a reasonable cost?*

(b) Does the cost of construction materials to the prospective investor properly represent the *reduction which has been made in the wholesale prices?*

(c) Is labor in the particular locality working at fair rates and giving fair value in the quantity and *quality of work done?*

Money must be made available on reasonable terms and in reasonable volume and free from demands for bonuses and commissions of a questionable character.

In many instances retailers of construction materials have not yet followed the reduction of manufacturers and wholesalers in their resale prices. This is an important subject to be taken up locally in each community. The retailers must be shown the necessity of bringing their prices to local buyers down to a point consistent with the reductions made in wholesale prices, after taking into consideration increases in freight rates or legitimate increases in cost which exist in other directions.

Labor:

This can not be regulated by national action. The cost of living, rentals, and working conditions differ in various communities, where fair wage adjustments have not been made, construction is held up. Such conditions should be dealt with fairly and frankly between employer and workmen and reasonable readjustments promptly made.

Approaching this subject, we believe that the employer should not permit the wage of his workmen to go below that point at which it not only provides sufficient income to take care of the necessities of life, but also enough to enable the famly to educate the children properly; to provide reasonable comforts and conveniences; and to permit systematic savings, even though small. In the comparison of wages for building artisans with those of other industries due allowance should be made for seasonal unemployment.

The workman, on the other hand, should deliver maximum production with proper interest in the welfare of the business out of which his wages are paid and should eliminate restrictions and measures which tend to interfere with his production or with the production of others. The stoppage of work from jurisdictional controversies in the construction industry should be permanently abandoned as detrimental to the public welfare.

The continuation of unfair practices is a factor contributing to high costs in some localties.

Notwithstanding the improvements which have been taken place in some instances with respect to the practices in the industry, it is apparent that there still exist trade abuses, waste, and unnecessary expense. It is a first essential of the proper development of the contruction industry on a sound basis that all practices which unnecessarily retard

BLUE PRINTS

the work or add to its cost should be immediately discountenanced and abandoned, if the confidence of the public is to be fully restored."

Suggested Plan for Community Construction Conferences

Based upon the conclusions quoted above, each Community is urged to give careful consideration to its own situation with regard to construction and to set up the necessary machinery and get it in motion as promptly as possible along the following general lines:

The Local Chamber of Commerce or other impersonal and impartial local commercial organizations should be called upon to appoint a local committee on construction development, which committee should fairly represent the various important elements in the construction field and should have on it at least one representative who might fairly be considered to represent the Public. All members of the committee should be men unquestioned standing in the community, who are known to be fair and reasonable in their attitude and in whom the Public can have entire confidence. It should largely be made up of men who are familiar with the construction interests and who will devote the time necessary to the carrying on of this work. The Committee should proceed with the idea that they are planning sound operations, not for the next few months only but for a period of years, in order that greater stability may be brought into the industry. In this connection, the following is quoted from the official report of the President's Unemployment Conference previously referred to:

"The business cycle is marked by peak periods of boom between valleys of depression and unemployment. The peak periods of boom are times of speculation, over-expansion, extravagance in living, relaxation in effort, wasteful expenditure in industry and commerce, with consequent destruction of capital. The valleys are marked by business stagnation, unemployment and suffering. Both of these extremes are vicious, and the vices of the one beget the vices of the other. It is the wastes, the miscalculations, and the maladjustments grown rampant during booms that make inevitable and painful process of liquidation. The most hopeful way to check the losses and misery of depression is therefore to check the feverish extremes of 'prosperity.'"

The members of the Committee must start with open minds. A representative of any one group must not start with the idea that his sole function is the collection and presentation of evidence in defense of the group. It is possible that certain bad practices are followed by a small percentage of certain groups and if each group will try to eliminate these practices, much progress will be made.

This Committee cannot accept as facts the statistics collected by interested parties in their attempts to prove their cases, but must verify all evidence of that kind submitted.

The Committee must be organized to do the work before it. It will need a Chairman, a Vice-Chairman and a Secretary, besides committees and probably sub-committees to perform certain work. In one locality they have the following committees: 1. Executive or Planning Committee; 2. Survey Committee; 3. Building Committee; 4. Materials Committee; 5. Labor Committee; 6. Financial Committee.

The Planning Committee should consist of say seven members, at least one from each of the other Committees. It might be well to have representatives from each interest or group on the committee. The committee should outline the work along broad lines and co-ordinate the work of all other committees. It is neither to limit the scope of the work of any one of the other committees. Nor is it to limit the amount of work to be done unless such work is already being done by one of the committees. In the early stages it might be well for all publicity to originate from the Planning Committee.

The Survey Committee should determine the conditions as they exist in the District. The composition of this Committee should be such that the services of those who are acquainted with conditions in various sections of the city are included, and the membership should contain at least two persons who are experienced in analytical work. This Committee must receive the co-operation of all the Federal, Governmental, State or Municipal agencies in the District and make a report to the Planning Committee or to the full Committee before any constructive program is determined on. The findings of this Committee will, to a large extent, indicate the troubles and possible remedies.

The Committee should at once proceed to:

1. Analyze the local needs for construction and maintenance work of all kinds requiring funds, materials and labor. What are the normal building requirements to take care of growth of vicinity? How many homes, hotels, hospitals, office buildings are needed to make up for years of reduced building activities? What is the extent of housing shortage? What kind of houses are needed? How many buildings whose occupants must find other accommodations are destroyed each year by fire or demolished to make way for improvements? How many buildings need to be rehabilitated or replaced? What is extent of overcrowding? How many buildings and homes need new roofs, sanitary facilities, electric wiring, papering, painting etc.? How much city paving needs to be redone, how many bridges and other structures are in a dangerous condition, etc.? Has the city a well planned program of school building and rebuilding, of paving and repaving, and other public works over a period of years? Do the building codes and laws conform to the recommendations of the National Building Code Committee and the Board of Fire Underwriters? These and many other questions which will suggest themselves will need to be answered.

2. Learn how much of this work is actually ready to get under way.

3. Ascertain why any necessary or desirable work is being held back.

4. If it is being held back on account of inability to finance, because of the high cost of money or reluctance of financial interests to advance funds for construction, the Financial Committee should hold conferences with representatives of local banking and other interests from whom funds should be forthcoming and work out plans of relieving the situation. Money must be made available on reasonable terms and in reasonable volume and free from demands for bonuses and commissions of a questionable character.

5. If work is being delayed because of high building material costs the Material Committee should hold conferences with supply people to,

(a) Determine if current local prices properly reflect reductions in wholesale prices after allowing for increased freight rates and other advanced costs.

(b) If they do not the Committee should use every proper effort to bring local prices down to a correct level.

TRUSCON
WATERPROOFING
PASTE
is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

Mercer County, R-238, Hickory Township, $63,147.45. Contract awarded to J. C. Devine Co., Alliance, O.

Mercer County, R-208, Mercer Borough, $29,813.58. Contract awarded to Jamieson & Marlee, Fredonia, Pa.

McKean County, R-100, Foster Township, $63,025.56. Contract awarded to D. Leroy Dennis, Eldred, Pa.

York County, R-216, Red Lion Borough, $128,052.93. Contract awarded to Warren Brothers, Boston, Mass.

Venango County, A-1856, Cornplanter Township, $120,213.05. Contract awarded to H. P. Streicher Co., Toledo, Ohio.

Clarion County, R-214, Toby and Madison Townships and Rimersburg Borough, $121,291.40. Contract awarded to R. V. Baldwin, Coraopolis, Pa.

Clearfield County, R-234, Woodward Township, $53,083.05. Contract awarded to R. J. Delong, Williamsport, Pa.

Clark & Dudnick, architects, of 23 South Sixteenth street, Philadelphia, have dissolved partnership. J. Frank Clark will continue the practice of architecture at the above-mentioned address.

The Pennsylvania State Board of Examiners of Architects announce that the next examination to qualify for registration in the State of Pennsylvania will be held in Harrisburg, June 27th to 30th, inclusive. The examination is based on the practical side of the practice of architecture.

Full information may be secured by addressing the State Board of Examiners of Architects, Commonwealth Trust Building, Harrisburg, Penna.

All applications for the June examination must be in the hands of the Board on or before June 10th, 1922.

INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 28, 1922. Sealed Proposals will be opened in this office at 3 P. M., May 29, 1922, for the remodeling and repairing of the United States Custom House and Post Office at Buffalo, N. Y. Drawings and specifications may be obtained from the custodian at Buffalo, N. Y., or at this office, in the discretion of the Supervising Architect. James A. Wetmore, Acting Supervising Architect.

(Contiuned from page 280)

(c) If prices are unduly high because of distance from producing points and the raw materials are more economically accessible locally, efforts should be made to have some company build a branch plant nearer to the town.

6. If work is delayed on account of unduly high labor costs the Labor Committee should hold conferences with the building employers and employees to develop—

(a) Whether average wages paid local building trades are consistent with wages paid for similar skill in other trades after taking into consideration the fact that workmen in the building trades do not have the same regularity of employment.

(In this connection the following distribution of labor costs for houses as published by the Building and Housing Division of the U. S. Bureau of Standards may help in determining a weighted average of building trades wages)—

Total Labor Costs—100%

Trade	Frame House	Brick House
Carpenters	49.6	32.2
Bricklayers	6.2	21.5
Hod Carriers	2.2	6.7
Plasterers	7.9	8.8
Plumbers	8.7	7.6
Electricians	2.6	2.5
Painters	10.0	6.3
Common Laborers	6.3	9.9
All others	6.5	4.5
Total	100.0	100.0

(b) Whether labor is giving a full day's work for a full day's pay. What are some unit costs, i. e., the cost to lay 1,000 bricks.

If wages have not been properly readjusted or if the workers in the building trades are not producing in quantity or quality as they should, the contractors and employers should be called upon to bring about proper readjustments and production by conferences with employees showing to the latter the necessity for the workers themselves doing their part with all other branches of the industry in getting building costs down to a level which will encourage extensive local construction activities which in turn will provide more continuous employment for the workers.

Unfair Practices—The continuation of unfair practices is a factor contributing to high costs in some localities.

Notwithstanding the improvements which have taken place in some instances with respect to the practices in the industry, it is apparent that there still exist trade abuses, waste, and unnecessary expense. It is a first essential of the proper development of the construction industry on a sound basis that all practices which unnecessarily retard the work or add to its cost should be immediately discountenanced and abandoned, if the confidence of the public is to be fully restored.

The building contractors, both general and sub, as well as the employees, must be appealed to to take advantage of this opportunity to eliminate all unfair practices which may exist and which either directly or indirectly add to the cost of construction unnecessarily. The employers and the employes will themselves know best whether or not any such unfair practices still exist. In some communities these practices have added an enormous burden of cost to the public and in such communities have gone far to destroy the public confidence in the industry of a whole. Whether it be employer or employee or due to the joint action of both that unfair practices still exist, they must be weeded out once and for all if there is to be a renewal of confidence and a revival of construction activity. The public is a deeply interested partner in the construction situation and its interests can no longer be ignored and the public can no longer be taken advantage of by any practices which mean a direct increase in the cost of construction or a more or less indirect increase due to delays and interferences of one kind or another in prompt completion of any construction activity.

If there are other reasons interfering with the starting of construction activities, such reasons should be investigated with the interests affected, along the lines suggested for these three more usual interferences, and every possible obstacle removed.

Then the committee should call a general public Community Conference participated in by the city officials to give it official standing, and the public will thus be advised of the readjustments which have been brought about to the end that the confidence of the people may be restored in the value of services rendered by the construction industry and the largest possible amount of work be started.

Local newspapers should be kept in close touch with the work of the committee and should lend the committee ample space for publicity of facts ascertained.

Once the general conference is over the local contractors and material people should soundly merchandise their services to the local market as brought out by the study of the committee. Constructive measures should be adopted in each locality by contractors, educational authorities and labor to attract and properly train a sufficient number of young men in the building trades to meet the construction needs of that community in years to come.

Once work is started again the committee should study and devise ways and means to obtain accurate employment records of building trades, proper allocation of materials and labor by distributing construction activities more evenly throughout the year to avoid as far as possible the seasonal slump of building activities, and to provide as nearly as practicable continuous employment for workers, less congestion of rail facilities and more uniform operation of producing mills, plants, and quarries.

The plan of setting aside a small percentage of public works funds, and larger industrial or utility maintenance and improvements appropriations to provide a reserve fund for construction in times of depression, is worthy of study and application wherever conditions will permit.

In most cities a larger percentage of contracts should be awarded during the Fall and Winter months.

In towns where union wage agreements are made they should apply for the calendar year and be entered into during the Fall of the preceding year so as to avoid delay in starting work in Spring on account of wage disputes.

The practice in some localities of obtaining a fixed percentage reduction from building supply dealers and all interests having direct bearing on the cost of construction for a limited period, in order to stimulate construction and bring conditions back to normal more speedily, is worthy of consideration when conditions permit of its application.

Details as to how special problems have been solved in various communities may be obtained or answers received to questions by writing Division of Building & Housing, U. S. Bureau of Standards, Department of Commerce, Washington, D. C., or The National Federation of Construction Industries, Drexel Building, Philadelphia, Pa.

As The Editor Sees It

PRELIMINARY arrangements were completed in Washington, Wednesday, May 3, for the organization of the American Construction Council when Secretary of Commerce Hoover agreed to accept the chairmanship of the organization meeting to be held in Pittsburgh, June 19. Franklin D. Roosevelt, of New York, formerly Assistant Secretary of the Navy, has consented to accept the presidency of the organization.

The purpose of the Council is to place the construction industry on a high plane of integrity and efficiency and to correlate the efforts toward betterment made by the existing organizations, through a conference association representative of the whole industry and dedicated to the improvement of the service which the construction industry renders to Communities, States, and Nation.

All branches of the industry are represented in the new body and have been divided into the following groups, each with equal voting power. Architects, engineers, general contractors, sub-contractors, construction labor, material and equipment manufacturers, material and equipment dealers, financial, bond, and real estate interests, public utility construction departments, and the construction divisions of federal, state and municipal governments.

So far as is known, this is the first time in the history of American industrial development that any industry has been represented by an organization in which all the elements have been brought together for the mutual interest of the industry and the public.

This action is the culmination of many efforts that have been made in recent years to solve the difficult problems thrown on the industry by reason of its size and complexity and the accumulation of construction due to the cessation of building activities during the war. The immediate inspiration for the movement has come from the interest displayed by Mr. Hoover in the industry and his belief in the importance of its revival for the awakening of business activity. In accepting the chairmanship, Mr. Hoover emphasized the need or an all-embracing organization such as the Council and pointed out that if it had been in existence before the present depression, it would have been invaluable in furnishing to the public unbiased facts pertaining to the different phases of construction, thus probably winning for the industry the confidence of the public.

The organizers of the Council are planning to take up a number of important lines of work, among them the following: Code of Ethics for the industry, development of a national building code, a research and statistical bureau, lengthening of the construction season, elimination of waste, standardization and dimensional simplification, development of apprenticeship systems, and encouragement of local study and better understanding of building situations.

E. J. Russell, of the Executive Committee of the American Institute of Architects, has been chairman of the preliminary meetings, and the organizing work is in the hands of a committee consisting of the secretaries of the American Institute of Architects, the Federated American Engineering Societies, the Building Trades epartment of the American Federation of Labor, the National Federation of Construction Industries, the National Lumber Manufacturers' Association, and the General Manager of the Associated Contractors of America.

For the first time since 1916, enough new dwellings will be built in this country during the current year to more than care for the increase in demand, according to reports received from over the country by the Civic Development Department of the Chamber of Commerce of the United States. In other words, the prospects are, according to these reports, that the accumulated shortage of dwellings will be somewhat cut down this year.

For the purpose of determining whether these reports are borne out by facts and for the purpose of going into other construction questions, there will be held a meeting on housing in connection with the Tenth Annual Convention of the Na-

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.

1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

tional Chamber in Washington, May 15 to 18. The general subject of the convention will be "European Conditions and their Effect upon American Business."

The housing meeting will be one of a number of group sessions. In announcing the questions that will come before the housing meeting, the Civic Development Department says:

"For the past five years and more most American cities have suffered from a housing shortage that in some cases was so acute that emergency legislation was passed to check rent profiteering and to stimulate building. Now reports are coming in from all parts of the country of great activity in building, particularly the building of houses. The Civic Development Department's records indicate that in 1922 we shall, for the first time since 1916, build enough new dwellings to more than care for the increase in demand. In other words, the prospects are that we shall this year begin to cut down on the accumulated shortage.

"Are these reports borne out by facts? Do the facts indicate a wholesome, steady increase of building which we may expect to continue until we have enough good houses, or do they indicate a boom, higher prices of materials and labor, followed by recession? Are the houses now being erected well planned and well built so that they will be permanent assets to their communities, or are they destined to soon become shabby and dilapidated? Is housing again on the way to becoming a good investment for the man who wishes to put his money into rental property?

"The principal speakers will be Leonard P. Ayres, vice president of the Cleveland Trust Company, who will present the Prospects of the Construction Industry in American Cities, and Lyman Clark, of the General Electric Company, Schenectady, N. Y., who will speak on the Dangers of Shoddy Construction. There will be ample opportuniy for builders and others interested to take part in the discussion."

ANNUAL MEETING OF THE AMERICAN INSTITUTE OF ARCHITECTS

The fourteenth annual meeting of the Pennsylvania State Association of the American Institute of Architects was held May 4th at the Princeton Club, Philadelphia, with M. I. Kast, president, in the chair.

Delegates representing the chapters from Erie, Pittsburgh, Southern Pennsylvania, Scranton-Wilkes-Barre and Philadelphia were in attendance.

Certain special items of interest to the building public and the architects of the State were given careful consideration.

For more than a dozen years the Philadelphia Chapter has had in charge the restoration of the most sacred of the group of historic buildings of the United States, of which Independence Hall is the central unit, which service has been rendered gratuitously, as has been done in other portions of the State. In most cases the profession has not been given proper recognition for such service.

The question of a State Building Code was carefully discussed. The preparation of the Building Code, which is now being written by the Department of Labor and Industry, was given consideration. In analyzing this Code, it was found that it did not meet the conditions of the building public, the thought of the Association being that in its present form it would affect a serious hardship upon the building public.

The attention of the Association was also called to the fact that buildings which house private schools in many cases do not meet proper conditions of health and comfort of the pupils, and that this matter should be investigated and that all institutions of this character should raise their standards in this respect to meet modern practice.

The Legislative Committee, composed of Sidney F. Heckert, Sr., Pittsburgh; M. I. Kast, Harrisburg, and Albert Kelsey, Philadelphia, was agreed upon. This Committee is charged with such new legislation as will affect the building public and the architect. They are further charged with recommending to the proper authorities that the architectural work of the various divisions of the State Government should be placed in the hands of the practitioner and that the State officials should exercise supervisory powers only, and that these matters should be taken up with the proper authorities.

The Association in expressing its endorsement of the Sesqui-Centennial Exhibition offer their services in the hope that it will be brought to a successful pass and that it may reflect credit not only on Philadelphia and the State of Pennsylvania, but also on the United States.

A special tribute was paid to John T. Comes, a noted ecclesiastical architect of Pittsburgh, who died recently.

The officers elected for the coming year are: W. L. Plack, Philadelphia, president; Sidney F. Heckert, Sr., vice-president; Percy Ash, Philadelphia, secretary, and W. G. Stickle, Erie, treasurer.

CORRECTION

The site for the Hotel for the Philadelphia Hotel Corporation has not yet been selected. The last issue of the "Guide" reported that this hotel would be built on Arch St., between 15th and 16th. According to H. M. Von Duyke, Chairman of the Philadelphia Hotel Corporation, 642 Widener Bldg., Philadelphia, no site has yet been selected.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

On and after May 8th, 1922, the Philadelphia Builders' Exchange and Employers Association will be located in its new quarters, 1716 Arch Street, (Morris Plan Building), and a house warming has been arranged for Thursday, May 18th, followed by the Annual Shad Dinner at Mineral Springs Inn, Willow Grove, Pa.

S. W. Strauss & Co., large lenders of money for new buildings, say with regard to the building situation:

"There is a good demand for funds to carry on new building operations. The general fundamental conditions in the situation are now so nearly normal that since January 1 we have underwritten building loans amounting to $43,980,000, of which $26,510,000 was for apartment houses, $12,350,000 for office and loft buildings, and $5,120,000 or miscellaneous structures. If the demand continues at the same rate, and fundamental conditions seem to so indicate, we shall be in a position to loan aproximately $100,000,000 more to finance new building construction during the balance of the present year.

"That the present encouraging conditions are nationwide in character is indicated by the widely scattered range of these financial underwritings which include loans in fourteen cities and thirteen states, as follows: New York, Chicago, Philadelphia, Boston, Atlanta, Detroit, Fort Worth, Cleveland, Birmingham, Dallas, San Francisco, Kansas City, Seattle and Portland, Oregon."

TRUSCON
WATERPROOFING
PASTE
is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 8, 1922.—SEALED PROPOSALS will be opened in this office at 3 P. M., June 5, 1922, for the construction of the United States Post Office at Front Royal, Va. Drawings and specifications may be obtained from the Custodian of the site at Front Royal, Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

We'll *write* your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

As The Editor Sees It

UNITING THE CONSTRUCTION INDUSTRY FOR THE COMMON GOOD

Secretary HOOVER to Preside at Formal Organizing Meeting—FRANKLIN D. ROOSEVELT Will Accept Presidency of New National Council

—By

E. J. RUSSEL, of the Executive Committee, American Institute of Architects and N. F. HOGGSON, of the Executive Board Associated General Contractors of America

FOR the first time in the history of American industrial development a great industry has united all its elements—manufacturers, labor, and the professional branches—in a great effort to raise the standards and efficiency of the industry and improve the service which it renders the public. The nearest precedent is that furnished by the selection of Will H. Hays as arbiter of the motion picture industry, but the American Construction Council, on which the organization details are now being completed, goes much farther. It dips down into the industry and brings together for conference, for betterment of understanding and for common action the architects, the engineers, labor contractors, materials' manufacturers and dealers, bankers and insurance men—all elements concerned with building work of any description and with the construction of public works, railroads, bridges, irrigation works, etc.

It is stipulated that all the work of the Council must square with the public welfare and so dominant has this idea been in the preliminary conferences that Secretary of Commerce Hoover, seeing the benefits that will result, has taken the responsibility of presiding at the formal organizing meeting in Washington, D. C., June 19th and 20th, and Franklin D. Roosevelt, of New York, former Assistant Secretary of the Navy, has agreed to accept the presidency of the organization.

The possibilities of the new organization are tremendous. If the reader were asked to tell what construction really is, the reply would probably be, "housing" or "plant construction and commercial building" or "highways and bridges," "railroads and canals" or perhaps "terminals for railroads and ship traffic or irrigation and reclamation projects." Yet all of these are merely divisons or classifications of a single industry and should always be included in the thought of the whole.

Instead of thinking of the building of houses as the individual expression of the fancy of the individual citizens, of the building of highways and railroads as merely the means of an industry we call transportation, of factory building and hydro-electric construction as isolated enterprises embarked in by isolated groups of individuals for private gain, we must think of construction as we do of agriculture, or of mining, or of manufacturing—as one of the great creators of permanent wealth, as one of the foundation stones in our civilization on which our progress is built.

Already indications of this are evident. Construction reports have become equal to crop reports as barometric indicators of the material prosperity of the country. On their rise and fall depends the well-being of millions of our people, the success of great enterprises, the future welfare of our citizens.

The popular belief is that American industry is divided into four basic in-

BLUE PRINTS

dustries, (1) agriculture, (2) manufacture, (3) transportation and communication, (4) mining and forestry. Such a classification leaves out of consideration, however, what has been demonstrated after investigation to be the second most important industry in the country, namely construction. When considered from the standpoint of the yearly volume and money involved, this comes second only to agriculture and is among the first of all industries when expressed in terms of the labor. Investigation has shown that the number of workers, who together with their families depend upon the construction industry for a livelihood totals approximately 11,000,000 persons. It was conservatively estimated that 24% of our annual capital accummulation and over 50% of our national savings are absorbed by this great industry every normal year. Approximately nine-tenths of all iron, copper and zinc and 95% of all the lead produced in this country are consumed in construction.

The support given to Agriculture and to Trade by the annual expenditures of this great number of persons is almost too apparent to need discussion. The following table shows the way in which over $5,000,000,000 are disbursed, and gives an excellent idea of the wide range of benefit from the expenditure of wages paid in the Construction Industry. The proportions are those established by the National Industrial Conference Board.

Rent	$ 756,500,000
Fuel and light	214,500,000
Food	1,598,500,000
Clothing	663,000,000
Medical Attention	113,000,000
Reading matter	41,500,000
Church and charity	46,500,000
Furniture, furnishings and general supplies	126,000,000
Recreation	229,500,000
Savings	600,000,000
Unclassified	601,000,000

Yet in this mighty industry each element has, with rare exceptions, acted by itself, looking after its own interest, neglectful generally of the rights of the other elements and, often indifferent to the rights of the public.

Since the war this lack of co-ordination, of actual understanding and of consideration of the service rendered the public has stood out more strongly than before. During the war it was necessary to postpone all but essential construction, leaving us at the close of 1919 with an enormous deferred volume of construction work. In 1920 we began to catch up, to fall back again in 1921; today we have a deferred total valued by students of the industry at $10,000,000,000. Of the housing shortage, an important part of this deferred construction, the general public is well aware. Yet the shortage exists in every line of construction. We have not enough office buildings or schools, railroads or highways, while sewerage, water-supply systems and paving are far behind present needs. This shortage has put great pressure on every branch of the industry and has forced it to study anew its relationship to the whole. Moreover, the public has lacked confidence in the fairness of building costs and this has added to the pressure put upon the industry. Not only has each of the elements been re-examining its position and responsibility but efforts at co-ordinated work have been made. The National Federation of Construction Industries, a war-born organization, was continued after the Armistice in an effort to pull the industry together nationally and has achieved some excellent results. The Building Congresses with notable successes at New York, Seattle and Portland, Ore., attacked the problem locally. The National Board for Jurisdictional Awards representing labor, contractors, architects, and engineers, and the Joint Conferences of Engineers, Architects and Contractors on Estimating and on Standard Contracts have each tackled specific problems common to the whole industry and demonstrated the need as well as the practicability of co-operation for the good of all.

The way has thus been well prepared for the great national movement now launched. Nearly every one of the 250 national associations in the industry has tested out its own work and learned from experience the large amount of duplicate effort and its inability to grapple effectively with the problems that extend beyond its special field. They are ready and eager to have these common problems taken over by an all-embracing organization so that there may be the elimination of duplication and more resultful work. They appreciate that the public demand will no longer wait and that only through a broad, virile and effective movement, dedicated to the improvement of the service which construction renders the community, states and nation can the industry gain public confidence. Through co-ordinated action there is opportunity for tremendous waste elimination, assuring to the public more and better homes, public buildings, railroads, bridges, etc., for their construction expenditure.

It is these tremendous possibilities, in dedication to the public service and elimination of waste, that have fired imaginations of Mr. Hoover and Mr. Roosevelt, and induced them to accept positions of leadership in the movement.

While the organizers have a large program of work mapped out, efforts will be concentrated at the start on a few of the more outstanding problems. Chief among these is the establishment of a code of ethics that will be universally accepted in the industry. Due to a small minority the whole business of construction is, as Mr. Hoover expressed it recently, in addressing the industry, "under a great cloud and the moral ethics of the business are challenged daily throughout the entire country." Mr. Hoover added these significant words:

"I am convinced that these things can never be cured by legislation or by jails. They can be cured by the resolute action of the vast majority of honest men who form the professions, and it has now become vital in the country's interests that this should be undertaken."

The organizers consider this message from Mr. Hoover a charter for their work. It is in this spirit that the ethical work will be undertaken in order that the industry may stand square with the public and that all practices inimical to the public welfare may be eliminated.

Statistics are much needed so that the industry may operate intelligently. While there are partial statistics collected by many sources, they have not been brought together and interpreted in the light of all the facts.

Local groups at New York, Seattle and Portland have very successfully brought together all elements of the industry for a better understanding of the local building situation and have accomplished much good. The new Council will promote similar local activities in other centers.

Another great problem stands ready for effective handling. There is a shortage of building mechanics, and the labor organizations need help in establishing the necessary apprenticeship system. Mr.

TRUSCON

WATERPROOFING

PASTE

is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

Contract awarded to Hughes-Foulkrod Co., Commonwealth Building, Philadelphia, who want sub-bids on all lines.

(Continued from page 312)

Hoover's department is making a national study of building codes, and when its work is completed there must be a nation-wide activity to carry the recommendations into effect—a type of activity which the new organization is designed to promote.

In addition the program of immediate work embraces transportation, encouragement of local building shows, publicity directed at giving the public an adequate conception of the magnitude and work of the construction industry and studies of seasonal employment, with the initiation of efforts to level out the seasonal swings.

In its organization the cardinal feature of the Council lies in giving each group equal voting power. The ten groups agreed upon are: Architects, engineers, construction labor, general contractors, sub-contractors, materials and equipment manufacturers, material and equipment dealers; bond, insurance and real estate interests; construction departments of public utilities, and the construction departments of federal, state and municipal governments. Some of the associations engaged in the organization work have been the American Institute of Architects, the Federated American Engineering Societies, the Buiding Trades Department of the American Federation of Labor, the Associated General Contractors, the National Federation of Construction Industries, the National Building Congress, the National Association of Building Exchanges, the Building Trades Employers' Association, the National Real Estate Board (not sure of name), besides a large number of associations of manufacturers.

With this strong backing the organizers feel confident that the American Construction Council wlll quickly be able to play an important part in the industrial life of the nation. Work of great magnitude lies right at hand, crying for attention. The public demands that the industry square itself with the public interest by eliminating the minority that have brought it into ill-repute. The individual elements of the industry are aroused to the responsibility which it owes the public and to the opportunities for elimination both of duplicate association efforts and of waste in construction operations.

The time is most propitious for action.

A PLEA FOR ZONING

The diversified architecture which is now characteristic of our Nation, and the extremes to which exigencies, due to unrestraint, have prompted the profession to go, have had an influence in bringing about the determination of nearly all of our great American cities to adopt Zoning plans.

While the primary object of zoning is to control the purpose, manner and method of using property, it will be recognized that under such control, harmonious and symmetrical development, in a considerable degree at least, must result.

We will concede, I believe, that the city that develops along the most symmetrical and conforming lines is the most beautiful, and when, along with such development, proper regard is exercised to protect health and public welfare, it may be safely said that that community architecturally has attained a condition approximating the ideal.

That the architecture of a city has a distinct influence upon the public mind of that community cannot be denied. It creates harmony or discord in proportion to the approximation of or departure from architectural perfection. It is like the blending of colors in art, or the mathematical and proportional arrangement of sound in music, and even though not skilled in these arts, one may quite readily recognize their imperfections. So it follows then that the architectural development of a community has much to do with the contentment, delight and satisfaction of its people.—*E. S. Goodwin in the Architect and Engineer.*

REINFORCCED CONCRETE SKY-SCRAPERS

Tall buildings are numerous in our large cities. Often the only comment that they attract is one of protest against the obstructions encumbering sidewalks during their construction. After a building has been completed few persons not conversant with types of construction will see anything to distinguish it from another similar building. The fact that it may be an entirely different type of construction, introducing perhaps new things of great importance economically, seldom becomes common knowledge. Also seldom does it happen that the average citizen recognizes in a new type of skyscraper an established, accepted type of construction having advantages peculiar to that type alone.

It really required world war conditions to give the necessary impetus resulting in larger, more extensive adaptation of reinforced concrete for skeletons of tall structures. Designers thus forced through inability to obtain materials for the commoner types of construction, turned to concrete and at the same time found to their surprise that the cost of such structures was lower than they had previously believed. They learned that an actual saving resulted by comparison with usual types of so-called thoroughly fireproof construction, worthy of comparison with reinforced concete.

They have found also that the time required to complete concrete buildings is somewhat less because the time element is considerably under control of the builder, since there is no necessity of waiting for the fabrication and shipment of structural shapes from distant shops. Materials for the most part can be obtained locally. This was of paramount importance during the war when economies in the use of transportation were imperative, and it still constitutes an important advantage of concrete construction. As a result hundreds of tall reinforced concrete buildings have sprung up during the last few years. In fact in many localities the majority of structures, ordinarily classed as high buildings, and which has been in progress or were completed during the past season, are of reinforced concrete. In Minneapolis and St. Paul alone there are twenty-six buildings from ten to fourteen stories high with reinforced concrete structural frames. A hasty survey covering the entire country discloses that the number of reinforced concrete buildings over ten stories high, completed or under way, total around 300.

Architectural and engineering firms that have thoroughly enlisted the economies and advantages of the high reinforced concrete building have become specialized in this type of construction because of the possibilities thereby offered for professional advancement.

The question naturally arises as to why high concrete buildings required the impetus of war to force their advantages to the attention of architects and engineers. In addition to the mistaken idea that they were high in first cost, the impression prevailed that the lower story columns of high reinforced concrete structural frame buildings would have to be excessively large. Reduction of rentable floor area was added to the assumed higher cost of the buildings with natural acceptance of the resulting error that the entire building would be uneconomical. This impression, like others of its kind, became fixed through tacit acceptance without investigation, largely because of its frequent repetition. It is gratifying to know that the question is no longer viewed in this light—that knowledge of facts prevails and that unsupported statements cannot pass without challenge.—*Building Management.*

ALTERATIONS A SPECIALTY

SHOP:
2122 South 19th Street

Residence and Office:
2122 South 19th Street

Philadelphia, May 10th, 1922

Mr. L. S. DeLone,
President,
Building News,
Phila., Pa.

Dear Mr. DeLone:-

After having signed the THIRD contract in less than ten days, by following the valuable tips of the DAILY BUILDING NEWS, I feel that no matter how busy I am I simply must write and express my appreciation to you for the excellent daily service that you are rendering the building business.

Contracts closed within ten days:

Alt. & Adds.	to 2025 N. 22d St.	Cost $7600.00
Alterations	" 2020-22 W. Norris St.	" $3600.00
Alt. & Ads.	" 1509 Spring Garden St.	" $4900.00

I am about to close two more contracts, and these will also have to be credited to your service.

Very respectfully yours,

A. S. SHAFER.

A.S.S/T.

As The Editor Sees It

COMMENTING ON THE AMERICAN PLAN IN INDUSTRIAL RELATIONS

H. B. ALLEN

Vice President, San Francisco Real Estate Board and Secretary, Industrial Association of San Francisco

THE general public may be interested in learning that the American Plan as established and enforced in San Francisco by the Industrial Association is something distinct and different from the old time so called open shop. Whereas the open shop wherever enforced usually has meant the entire absence of all restriction or restraint upon employers with respect to wages paid, hours of work and other conditions of employment—thereby giving opportunity for unscrupulous employers to deal unfairly, the American Plan in San Francisco has set up machinery for reasonable control of these matters in the interest of the public.

In other words, it really has been a PLAN, definitely conceived and definitely carried out, in the interest not of any special group or faction, but in the interest of the three parties to industrial relations: the public, labor and the employers.

The American Plan is predicated upon the proposition that the public interest is paramount to that of any other community element, and that neither labor nor capital, nor any other faction or class, should be allowed to take action that will jeopardize that interest. And, as the public interest actually would be jeopardized as much by unfairness of any kind visited by the employers upon labor or consumers, as by autocratic labor union control of industry, the American Plan prevents either of these things taking place.

The American Plan says to labor: "You cannot be allowed to secure an autocratic, selfish and restrictive control over industry, for the result is that not only the industry itself but the whole public in seriously injured thereby." It says to the employer: "You cannot be permitted to beat down labor, for when labor receives less than that to which it is justly entitled, not only labor but the whole public suffers seriously and is permanently injured—and we will not give you such unlimited backing that you can enter into combinations with your competitors and get a monopolistic control in your industry under cover of a community-wide organization."

Then, turning again to labor, it says: "You are entitled to an equitable wage, to reasonable hours and to decent working conditions, but in turn you must be willing to give to your employers, honest, loyal and efficient service." And turning once more to the employer, it says: "You have the right to demand honest, loyal and efficient service from ALL your employees. You are entitled to the right of hiring and discharging employees individually on merit, without outside interference, so long as on all occasions that right is exercised only upon broad principles of justice; and to the right of rewarding individual merit in employees, but in turn you must recognize the obligation of the management to the employees generally, and particularly to co-operate in providing, so far as possible, continuous employment."

Roughly, and in brief, that IS the American Plan as established and enforced in the building industry of San Francisco by the Industrial Association. Theoretically fair, it stands proven as practically fair as well. It has freed labor from the self-imposed but misconceived restraint of selfish leadership, has emancipated employers from the throttling control of labor unions, and has guaranteed to the public, to labor and to the employer that all their legitimate rights will be protected at all times.

"Never have conditions in the building industry of San Francisco been as healthy as since the introduction of the American Plan," says Warren H. McBryde, President, Industrial Association of San Francisco.

Real estate transactions, which invariably reflect building operations, during the month of March totalled more than fourteen million dollars, indicating the greatest volume of business for any like

DRAWING MATERIALS

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

period since March, 1906—when the building boom preceding the great fire was at the very peak.

The first quarter of 1922 recorded the issuance of building permits amounting to more than eleven million dollars, which is a 70% increase over the first quarter of 1921. The permits for April show an increase of 20% over March, and of 108% over April of last year.

Based on these figures, building operations in San Francisco for the year 1922 will reach approximately sixty million dollars, an increase of more than 100% over the year 1921. And with the wage scale now prevailing under the American Plan and guaranteed by the Industrial Association of San Francisco to continue throughout the year, labor will receive virtually fifty per cent. of this sixty million dollars.

In the face of these figures, which are all very conservative, every impartial person will agree that the American Plan in San Francisco not only has been absolutely fair to the public, to labor and to capital, but also has been of the greatest stimulus and aid to the entire building industry of the city.

"Make the world a safer place to live in" is the rallying cry of safety engineers who are attending the sessions of the Convention of Governmental Labor Officials of the United States and Canada in Harrisburg this week.

A number of important problems confronting safety and welfare workers in the industries have been scheduled for discussion at the convention, Pennsylvania Commissioner of Labor and Industry C. B. Connelley announced in making public plans for a "Safety Rally" as part of the convention program.

The part that Pennsylvania has played in safety matters will be set forth and an organization of the safety interests of the State will be suggested to carry on the work of the Department of Labor and Industry in the field. Commissioner Connelley explained that "such an organization, comprising the safety people of the State, will be a real forward movement in keeping Pennsylvania in the lead on safety."

As part of the program of the Association of the Governmental Labor Officials safety occupied the attention of the delegates at a meeting on May 23rd. A round table discussion on safety, inspection, and sanitation was held with nationally known experts along this line scheduled to present short talks on the progress that has been made in the "Safety First" movement throughout the country.

It is quite likely the proposal of Commissioner Connelley to establish at the 1926 world's fair in Philadelphia a suitable exhibit of safety devices from all parts of the world will be endorsed with assurance from every state labor official present that it will be a success.

Emphatic encouragement of the project of an international safety exhibit at the Philadelphia Exposition has been given Commissioner Connelley by those active in the arrangements for the fair, and all that is needed is the whole-hearted support of officials who will co-operate in providing a suitable exhibit. The Labor Officials Convention in Harrisburg is the place this support can be obtained, and the safety rally is the occasion.

TIMBER PRESERVATION GROWS IN IMPORTANCE

The increased demand for permanent timber structures is shown in a recent report of the Service Bureau of the American Wood-Preservers' Association.

Over 2,400,000,000 board feet of timber for various purposes were pressure treated in 1921 by the 122 wood preserving plants in operation throughout the United States, thereby surpassing the 1920 record by nearly 17 per cent. Approximately equal amounts were treated with coal-tar creosote and with zinc chloride, the standard wood preservatives.

To treat this wood 51,375,360 pounds of zinc chloride, with an absorption of one-half pound per cubic foot, and 79,384,326 gallons of creosote, with an absorption of 5 to over 20 pounds per cubic foot, were required.

Ease of handling and the permanence of well-treated wood at low cost are given as the reason for the increased demand. The proper use of a wood preservative adds a new quality to timber which enhances its value as a construction material.

The material treated consisted mainly of construction timbers for wharf, bridge, highway, mining and building purposes, piling, telephone and power poles, ties, fence posts, wood blocks for street paving and for fctory floors, and timber for miscellaneous uses.

AMERICA'S SECOND INDUSTRY

Magnitude of Construction

BY LEONARD C. WASON

President, Aberthaw Construction Co., Boston

I think few are aware of the magnitude of the construction industry. An investigator for the Associated General Contractors of America traveled throughout the United States during a three months' period in 1920 and found few who would admit there was a construction industry. No governor of a Federal Reserve Board knew what it was. Therefore a tabulation of statistics was made, supervised by one of our Executive Board members, which was published by the Chamber of Commerce of the United States in a special bulletin dated June 17, 1921, from which some of the following figures and facts are abstracted.

The largest single industry of this country is agriculture. The second largest is the construction industry, which includes not only the final assembly of materials as handled by members of this Association, but also the preparation of all materials from their original raw state in nature, including transportation.

The three necessities of life are food, clothing and shelter, and to make these available requires transportation. The construction industry includes the production of shelter and transportation and subsidiary activities.

Birth of Construction Industry

As soon as man emerged from his primitive state and required resources other than those of the lower animals, the construction industry was born.

The popular belief is that American industry is divided into five basic divisions, namely, agriculture, manufacture, transportation and communication, mining and lumber. A separate classification known as construction is now being created that may somewhat readjust these classifications. The Nation's wealth in 1920 was estimated at $290,000,000,000. The amount of this produced by the construction industry is $77,321,000,000.

Aside from agriculture 42 per cent. of all persons engaged in gainful occupation are engaged in manufacture. These concerns employed, by the census of 1914, 10,658,000 workers. Deducting public service employees, professional occupations and domestic service from those engaged in gainful occupations outside of

TRUSCON

WATERPROOFING

PASTE

is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Reservoir Waterproofed with Truscon Waterproofing Paste Concentrated.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., May 15, 1922. Sealed Proosals will be opened in this office at 3 P. M., June 14, 1922, for the construction of new piers and dredging for the United States Quarantine Station at Rosebank, Staten Island, New York. Drawings and specifications may be obtained from the Supervising Chief Engineer, 731 Custom House Building, New York, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 328)

agriculture leaves 57 per cent. of all other workers employed in manufacture. Roughly speaking, about one-fourth of all persons engaged in manufacture may be said to qualify for the construction industry, as do likewise all the plants whose products go into construction solely.

Half Billion in Coal For Construction

The products of mines in the United States in 1920 have an estimated value of $4,400,000,000, and the wages approximated $1,000,000,000. Forty per cent. of bituminous and 19 per cent. of the anthracite coal is used in manufacture. Two-thirds of the remaining output of bituminous coal is used by the railroads and street railways, and approximately one-quarter of railroad coal is used hauling construction material. The consumption of $500,000,000 in coal is due to the construction industry.

Approximately 90 per cent. of all iron ore, copper and zinc, and 95 per cent. of lead production are consumed by construction, making in 1920 an additional credit to this industry of $750,000,000 for products.

Ot a total of approximately 14,000,000 workers employed by manufacturing, railroads and mines, nearly 12,000,000 are males. Of these, Government figures estimate approximately 8,500,000 are married. Assuming the average size family, given in the United States Census as 4.4 persons, and as one-quarter are classified as belonging to the construction industry, it appears that almost 11,000,000 persons, either as workers or as members of workers' families, derive their living through construction.

The support given to agriculture and trade by the annual expenditure of this great number of persons, which amounts to over five billion dollars, is too apparent to need discussion.

Wealth Produced by Construction

Construction is a pre-requisite to wealth accumulation and it is only by this means that the immense resources of this country are made available for every day use. The money necessary to extract and transport our natural resources and change them into such forms as reach the ultimate consumer must come from the general savings fund of the Nation. These in 1913 were $6,500,000,000; in 1918, $22,000,000,000; in 1920, $11,500,000,000.

Of that part of the Country's savings which goes into new capital, 50 per cent. or about $2,723,000,000, was used for construction in some form or other. The estimate is necessarily below the actual, as many activities are not reported, and therefore cannot be tabulated. Probably one-half of the national savings were absorbed by construction.

A report by the Senate Committee on Reconstruction and Production estimates that from 10 to 20 billion dollars are necessary to provide for structural facilities which would now be in use had there been no war, and of this amount five billions are needed for the building of homes. Thus, construction would seem to be the barometer of our industrial life. When depression strikes construction it rocks the entire industrial structure.

The builders who handle the final assembly of these materials, like ourselves, are like the keystone of the arch. On them depends a great responsibility to safeguard the interests of their industry as well as of the entire Nation, which depends upon them to so large an extent.

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

The "Builders' Guide" is in its thirty-seventh year of continuous publication.

As The Editor Sees It

BRICK BUILDINGS AND BRONZE TABLETS

AT a recent meeting of the Philadelphia Brick Manufacturers' Association held in conjunction with the Brick Manufacturers Association of Eastern Pennsylvania, Southern New Jersey and Delaware, with a large number of architects and other guests present, Mr. Carl A. Zeigler, nationally known architect, gave an intereting address on the subject of Early American Brickmaking.

Mr. Ziegler said:

"It is certainly most appropriate that the Brick Manufacturers' Association of Eastern Pennsylvania, Southern New Jersey and Delaware should meet in Phildelphia as there is no other city in the country that was so largely influenced by the use of brick construction in the Colonial days and no other city can exhibit so many excellent early examples of this type of architecture.

The late Dr. S. Wier Mitchell wrote his splendid book on "The Red City" with this in mind and Philadelphia was familiarly known as the brick city in the early days when it was the metropolis of the Colonies.

Unfortunately few Americans realize what a heritage they have in the old brick buildings of this country.

If you have ever made a pilgrimage in search of old Colonial brick buildings you have probably observed that the first fact the "oldest inhabitant" attempts to impress you with is that the "bricks were all brought from England."

Most of these imported bricks belong in the same category as the furniture which is reputed to have come over in the Mayflower; some came, of course, but it is appalling to think of what a fleet would have been necessary to bring over all that is said to have been imported, to say nothing of the expense. Ships were few and small and the demand for the very necessities of life was great. It is incredible, therefore, that any great quantity of brick could have been imported in those early days.

To test these oft-reiterated statements I have searched the early records and thought you might be interested to know just when bricks were first made in this country. The search has brought out many interestng facts and if our forefathers imported bricks from Europe up to the time of the Revolutionary War and after, as has been said, they were not the thrifty business men that we are accustomed to consider them.

The first brick kiln in New England was erected in Salem, Mass., in 1629. The minister at Salem during July of that year wrote "It is thought here is good clay to make Bricke and Tyles. At this instant we are setting up a brick kill to make bricke for the building of our houses."

Gawan Laurie of East New Jersey writes in 1684 "The poorer classes of houses are quite primitive in style, trees were split and set up with one end in the ground and the other nailed to the 'Rising.' They were covered with shingles and plastered within. Barns were built in the same way and the cost of these was about £5. Some use Pantiles in the Dutch manner. We have good brick earth and stone for building at Amboy and elsewhere. The country farm houses they build very cheaply, a carpenter with the Owner's own servants build the houses, they have all the material for nothing, save the nails."

The first dwellings erected by the Swedes in Pennsylvania and Delaware were very crude and chiefly of wood, one story in height with a single room with a low entrance door and crude windows that were merely openings in the walls, later to be covered with oiled paper in liu of glass. They were of the type common in Northern Europe for a century or two previous. On Timicum Island and Christiania Creek they built strong rude forts of hemlock and hickory logs. They built a brick house at Wicaco in 1700 which still stands. Better dwellings were erected by their successors and neighbors, the Dutch, who brought bricks from New Netherlands for the purpose. At New Amstel (New Castle), Delaware, bricks were made in 1656. (Wm. Penn landed in New Castle, Octo-

ber 27th, 1682.)

Although the first English settlers in Pennsylvania were compelled to find lodging under the friendly trees and in caves or huts (John Key, the first child born of English parents in Philadelphia having been born in a cave in the bank near Race street) they were shortly in possession of substantial brick houses. One writer states "Far out Market Street at Center Square embosomed in the Forest was erected in 1684 the First Friends' Meeting House, a large plain brick building." The present City Hall now stands on this site at the intersection of Broad and Market Streets. William Penn's instruction to this agent in 1684 was to build principally of bricks "for which end I have sent a person qualified to make them."

Clay, sand and gravel were abundant within the city and fuel abounded on the banks of the Delaware and Schuylkill Rivers.

It is probable that some of the early houses, of which Philadelphia contained in 1684 over three hundred, were built of imported bricks, but Pastorius who founded Germantown in 1685 records that "they had a sufficient number of mills, brick-kilns, and tile ovens for all purposes." Four-fifths of the buildings in Philadelphia at the close of the Eighteenth Century were of brick and the city had at that early date a high reputation for the manufacturing of brick.

Christ Church on Second street, north of Market Street, was built in 1727, but there was a Church upon this site as early as 1695.

This church which was the most important church building in Philadelphia in the Colonial days is a splendid specimen of Colonial architecture and quite equal to any edifice that has been erected in Philadelphia up to the present day. Like all the important Churches within the city this structure is substantially built of brick in the old manner that creates such a distinctive atmosphere of refinement and restraint. There has been much debate among antiquaries as to whether the brick was imported from England or not. There are records in the archives of the Parish showing that bricks were delivered by "sailing vessel" to Philadelphia for the structure erected in 1685, but whether the vessel came from England or from another of the Colonies, or possibly from New Castle on the Delaware only a few miles below Philadelphia where brick was made in 1656, is not stated. The 1727 structure was erected under the direction of Dr. John Kearsley and although no plans are now in existence, drawings were no doubt prepared by him. In 1746 a competition seemed to have been held in order to secure a design for the spire (possibly the first architectural competition in America), in any event the Vestry decided in June, 1746, that "in erecting the spire the draft which Mr. Harrison drew should be followed."

St. Peter's Church on Pine Street between Third and Fourth Streets was started in 1758. Dr. John Kearsley (the same man who had in charge the building of Christ Church) and six others drew up a plan that was approved by the Vestry and the work was dedicated in 1761. Old St. Peter's with its grounds covering almost an entire city square, enclosed by a brick wall whose gateways have become a tradition in the architectural profession, stands as a monument to those sturdy straight thinking men to whose efforts we owe the "Red City" of Pennsylvania.

Gloria Dei commonly known as Old Swedes Church at Water and Christian Streets was erected in 1698. The selection of the site was long delayed by a disagreement. One faction wanted it built at Passayunk (now Point Breeze) while others wanted it erected at Wicaco, about half a mile below what was then the southern boundary of the city. Finally at a congregational meeting on May 17, 1698, the matter was settled by writing the names of both places on separate pieces of paper and placing them in a hat. After tossing them around they were thrown upon the floor and the one bearing the word Wicaco landing face upward, the matter was settled.

This is the earliest brick Church in Philadelphia and was built to replace the old block house built upon the site in 1665 in which the Swedes were accustomed to worship. Although smaller than Christ Church or St. Peter's it is a fine old example of Colonial architecture and quite Pre-Georgian in its style.

The most important early brick structure in Philadelphia is Independence Hall well named the "Cradle of Liberty." The events which occurred within its walls have stirred the imagination of the world. The large central building of this group was designed by Andrew Hamilton, a lawyer; the land was purchased in 1730 and Andrew Hamilton, Dr. John Kearsley and Thomas Lawrence were appointed to supervise the construction of the building. Many delays occurred and in October, 1736, when the Legislature sat in the east room on the first floor the windows were still unglazed. The tower was built in 1750, but the steeple was not erected until 1753.

Independence Hall has unfortunately undergone many changes and has been used for a variety of purposes. For a time it was rented to Charles Wilson Peale, the artist, and used by him as a museum. Later it was used by the City Councils.

The building was sadly neglected for many years and unfortunately when it was restored the Chamber in which the Declaration of Independence was signed was not restored to its original condition. The first floor of the building and the stair hall are pleasing in design, but it is nevertheless to be regretted that we are not able to visualize the interior of this historic building as it existed in 1776.

The westernmost building of the Independence Hall group known as "Congress Hall" was originally intended as the County Building. It was completed in 1789 and Congress first sat in it on December 6, 1790, when the National Capitol was removed from New York to Philadelphia. Congress occupied this building until May, 1800, when they removed to Washington, D. C. The building was restored by a Committee appointed by the Philadelphia Chapter A. I. A. in 1913 and has since been used as a permanent museum for the exhibition of antiquities of the Colonial Period.

The old Jail was located at Sixth and Walnut Streets, just in back of Congress Hall and convict labor was used in constructing the latter building. From the quaintly worded records we learn that human nature has not changed much since the early days, for the convict laborers were in the habit of lifting the iron ball and chain by which they were shackled and dropping same into the mud on the passing of some of the silk-stockinged gentry out on promenade, which fact seriously disturbed the city fathers and brought many threats of suit for damages.

At the eastern end of the group is the First City Hall, possessed by Philadelphia; it was built in 1790. Although ori-

TRUSCON

WATERPROOFING

PASTE

is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Reservoir Waterproofed with Truscon Waterproofing Paste Concentrated.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

Architect taking bids.

(Continued from Page 344)

ginally intended for city offices, it was necessary to tender a portion of it to the United States Supreme Court,, when the Federal Government was moved to Philadelphia in 1790. The Supreme Court held its first session in the building on February 7, 1791. The Supreme Court of the State of Pennsylvania also sat in the building and subsequently it was occupied by the City Councils.

When we read in the early history of the Colonies that smoking was prohibited within the city limits in certain provinces and travellers were prohibited from smoking but once in a ten mile journey in others, we are inclined to attribute puritanic instincts to our staid and sober forebears but certainly they did not taboo the lottery, for the records show that a lottery was instituted to further the erection of this "Towne Hall" in Philadelphia with $50,000.00 as the aggregate, 20 per cent. of which was to go to the fortunate winner.

At the rear of this interesting group was the "State House Yard" or the "Mall" as it was sometimes called. This contained a serpentine walk and it was the custom of the elite to promenade thereon upon pleasant afternoons as a mode of recreation. The "Mall" was surrounded by a brick wall with piers at regular intervals, the entire height of which was 8 feet. The city fathers became apprehensive that the air in the "State House Yard" was not conducive to the public health and after deep deliberation it was deemed desirable to remove the brick wall between the piers and to replace thet same with "iron palisades in order that the atmosphere might me made more salubrious." It is to be hoped that the treatment was efficacious.

Steadfast and true to every belief that they held, these sturdy pioneers of the young Republic have left us monuments of government and of art which we of a more hectic generation may well strive with like singleness of purpose to emulate.

Up until 1829 all the bricks used in this country were made by hand, but during that year the manufacturing of brick by machinery was successfully started. In New York the machinery then used made twenty-five thousand bricks per day and they were sold for Five Dollars ($5.00) a thousand. The Salamanda Fire Brick Works at Albany, New York. was established that year and was so successful as to stop the importation of fire bricks.

So closely is the making of brick interwoven with the march of human progress that one must go back to the dawn of history to learn of the beginning of the industry. The earliest evidences we have of recorded history are a few manuscripts and inscriptions found in Egypt, dating back about three or four thousand years B. C. Those of Babylonia are scarcely less ancient. Both of these countries owe their prosperity to great rivers which inundated the land enriching it for agricultural pursuits and furnishing also great deposits of clay from which the natives built houses. first of adobe and then of brick. Israel labored long in Egypt as brick makers as Scripture records. Babylonia, situated as it was between the Tigris and Euphrates Rivers in the valley called Mesopotamia (The land between the rivers) possessed no forests although the date palm was abundant and with little stone, they early restored to the expedient of moulding the clay into bricks, which were dried in the sun and from these they built their cities.

Of all the early Babylonian kings the most famous was Hammurabi, who ruled about 2000 B. C. He it was who formulated the oldest code of laws which we have any record, but long before man achieved a legal code he made bricks and from the characters imprinted upon these bricks, marking the dynasty under which they were made, many important dates in history have been verified.

Noble indeed has been the art of brick making and human progress owes much to this industry.

In further connection with the early use of brickwork locally, Mr. Joseph T. Byrne, Secretary of the Philadelphia Brick Manufacturers' Association, said:

"Out of all the data concerning Philadelphia's place in history and among the thousands of valuable and interesting facts connected with the development and growth of this city in its early days, probably by far the most interesting to the members of the Associations gathered here and to many others also, is that relating to the use of brick.

In order that you may appreciate the extent to which clay has entered into the growth of our city as expressed in its architectural and historic monuments, let me mention the following as but a few of our finest colonial buildings.

The William Penn House, now standing in Fairmount Park, was erected for William Penn before he landed in the year 1682 and stood on Letitia Street below Market.

In 1700 Old Swedes' Church was built and was then deemed a great edifice. This was followed by many others of common brick, among the more important of which were Stenton, the home of James Logan, 1727, at one time the headquarters of George Washington; Independence Hall or the State House begun in 1729, and completed in 1734, at a cost of £5,600, the bricks costing 31-s; 8-d per thousand and the laying 10-s; 6-d.

(Continued Next Week)

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

BRICK BUILDINGS AND BRONZE TABLETS

(Continued from Last Week)

At the time that the State House was in the course of construction, Christ Church, another famous landmark of American History was erected in 1731.

During the second half of the 18th Century many other notable buildings of brick were completed in this vicinity, among the examples being the Pennsylvania Hospital, 1775; Woodford, now used as Woodford Guard House, in Fairmount Park, 1756; the Powell House, 1762; Carpenters' Hall, built some time previous to 1774; the Robert Morris House on South Eighth Street, 1786; and the Wharton House, 1796.

The Friends' Meeting House at Fifth and Arch Street, 1786; and the Wharton House, 1796.

The Friends' Meeting House at Fifth and Arch Streets was built in 1804 and is today one of the most prominent examples of brick architecture in the city, with its brick wall surrounding the grave yard in which lie the remains of the immortal Benjamin Franklin.

These are only a few of the notable examples of the use of brick in the early days of Philadelphia, but they furnish a clear idea of the extent to which this material has entered into our history."

Announcement was then made by Mr. Charles B. Siner, President, that the Philadelphia Brick Manufacturers' Association would award bronze tablets for best building erected in Philadelphia in 1922.

A letter announcing these awards has just been sent to the Architects, Engineers and Constructors of Philadelphia from which the following is quoted.

"At the end of this year the Association will award four bronze tablets for those four buildings in Philadelphia and its suburbs which are selected by the Committee of Awards as being those in which, in the opinion of the Committee, the most appropriate and attractive use has been made of Brick produced in Philadelphia.

The awards will be as follows:

One tablet in triplicate to the Architect, the Builder and the Owner of a private residence costing less than approximately $10,000.

One tablet in triplicate to the Architect, the Builder and the Owner of a private residence costing over approximately $20,000.

One tablet in duplicate to the Designer and the Builder of an "Operation" house.

One tablet in triplicate to the Architect, the Builder and the Owner of an industrial building.

The tablets will be suitably designed and each will bear the name of the recipient.

It is hoped that the award of these tablets will encourage Architects, Engineers and Constructors of this City to investigate and become more generally familiar with the characteristics of Philadelphia made bricks and the artistic effects obtainable through their use.

It is the further hope of the local brick industry that a better understanding and co-operation in the production of this splendid local material may, through its more extensive and appropriate use, widen the reputation of Philadelphia and its suburbs as a City of Homes.

Messrs. Albert Kelsey, F. A. I. A.; Carl A. Ziegler, F. A. I. A., and D. Knickerbacker Boyd, F. A. I. A., Chairman, have consented to act as a Committee, or Jury, which will at the end of the year make the awards for buildings completed since January, 1922.

It will afford the Philadelphia Brick Manufacturers' Association much pleasure to receive comments or suggestions from Architects and others concerning the possibilities of production and utilization of local brick.

THE ORIGIN OF BRICK

Romans became master brick makers, acquiring their knowledge during their occupation of Egypt. While the art of burning brick was discovered by the Babylonians about 4500 B. C., the Romans were the first to burn brick in a stationary kiln, which was about the beginning of the Christian era. These kilns were about the same pattern, the

BLUE PRINTS

settling and the firing, as our present clamp kilns. Caesar was one of the first Romans to use burnt brick. In the year 44 B. C., he built the wall of Rostra.

Roman brick in the time of Pliny were made in three sizes which ranged from ½ inch to 2 inches thick, 7 inches wide and 7 inches to 18 inches long, and were used extensively for buildings to a height of seventy feet, as it was thought they would not stand a load of more heighth. Concrete walls were faced with brick and broken fragments of irregular shape, in the middle of the first century, B. C., in order to save brick, but still have the brick effect, but in the ladder part of the first century A. D. they made thin brick especially for this purpose. Even partition walls as thin as 3 inches were faced with brick on both sides.

Pliny ordered all brick to be marked and requested the architects only to use sun-dried brick after they were two years old. Vitruvius made a law at Utica that sun-dried brick should be 5 years old before they were used.

The Romans were very careful in the selection of their clay, preferring a whitish or reddish clay. After the clay was tempered and moulded the drying took place, either in open air or under sheltered roofs, when thoroughly dry they were placed in the kiln for burning and the ones for sun-dried use were placed under cover out of the weather. The Romans' special time for making brick was in the spring and fall. Soldiers for military purposes were largely used for the manufacture of brick.

With the expansion of the Roman Empire brick penetrated every corner of the European continent and found its way across the channel to the British Isles, about 44 A D., and was manufactured under the direction of Alfred the Great in A. D. 886. In these early days children were used a great deal in the brick plants as laborers. The task for two children was to carry enough clay to make 3,000 brick from the clay banks; at one plant their trips combined made 12½ miles per day, and a day's work was 13 hours.

The art of brick making seems to have been lost when the Romans withdrew from Britain, and it is doubtful if any burnt brick were made in Britain from that time until the 13th century, and it is thought any brick used during this time came from ruins of old Roman buildings, such as at Colcheste and St. Albans Abbey. One of the earliest existing brick buildings, erected after the revival of brick making in England, is Little Wenham Hall in Suffolk, built about 1210 A. D., but not until the 15th century did bricks come into general use again, and then only for important edifices.

During the reign of Henry VIII brick making was brought to great perfection, probably by workmen brought from Flanders, and the older portions of St. James Palace and Hampton Court Palace remain to testify to the skill they attained.

The great London fire in 1666 transformed her from a wooden to a brick city, great activities were given to brick, not only the development of brick manufacturing plants, but also to ornamental brick, and the use of the same to buildings. Up to the reign of Charles I brick of various sizes were made, but in 1625, the first year of his reign, the size of brick was regulated by statute and the present standard form 3x4¼x9 was adopted.

There can be no doubt that up to the time the influence of Flanders and Holland in English brick making and bond was formative, and that under this influence a native bond, the Old English, which was substantially the Old Dutch, modified by alternating a pure stretcher course with the header course, was developed, being regarded as structurally the strongest and most reliable bond. But with Charles II and James II a stronger artistic sense invaded the island from the continent so that it is very natural to find the appearance of the Flemish bond in English buildings.

In the year 1784 a duty of one-half a crown per 1,000 was imposed on the brick of all kinds. Ten years later it was raised to 4s per 1,000. In 1803 a classified schedule of duties on brick and tile of different qualities and sizes was used. This remained in force for 30 years, when the duty on common brick was raised and the tile was exempt of any tax; in 1850 the tax on brick was taken off. The brick industry in England started to flourish at that time and the capital invested in the brick industry at that time was about £2,000,000. In England, as early as 1619, there are letters of patent. The eleventh one being for the protection of the "Art of making a certain engine to make and cast clay brick and tile." In 1839 a machine was patented to make 18,000 brick in ten hours. In 1868 forty-seven patents relating to brick and their manufacture had been granted.

In 1629 we have a record of 10,000 brick sent from London, England, to Massachusetts, which was used in the construction of fire-places. In the same year the first brick-kiln was built at Salem Mass.

Among the first brick buildings built in the United States that we have record of was built on Manhattan Island in 1633 by a governor of the Dutch West India Company. These brick were shipped here from Holland. In 1643 a brick watch house was built on Fort Hill, in the town of Plymouth, the brick were sold at 11s per 1,000.

The first brick made in the Anglicon Colonies were made in Virginia as early as 1612 during the administration of Sir Thomas Gates. The first church in Virginia was of brick and was destroyed during Bacon's rebellion in 1676.

In 1667 the Massachusetts court appointed a committee to frame a law to regulate the size and manufacture of brick.

In 1677 a brick college edifice was built at Cambridge and in 1694 a brick meeting house. Two years before this the General Court required buildings above a certain size to be built of brick or stone and their roofs covered with slate or tile.—*The Clay Worker.*

INVITATION TO FIRST MEETING OF CONSTRUCTION COUNCIL

Lacking facilities at present for direct communication with the thousands of important men in the construction industry, the temporary directing committee of the American Construction Council begs leave through the columns of the engineering, architectural and construction press to extend a personal invitation to each member of the industry to attend the organizing meeting in Washington, D. C., June 19 and 20.

The step contemplated, that of bringing together for co-operation in behalf of the industry and of the public all the elements of construction activity—engineers, architects, labor, the contractors, the manufacturers and dealers, and the fin-

TRUSCON

WATERPROOFING

PASTE

is the acknowledged standard integral waterproofing compound for concrete foundations of all kinds. Approved by architects generally. Used in the largest building operations throughout the country. Mixed with the tempering water, it confers powerful water-repellent properties to concrete, adds to the compressive strength and is permanent.

Reservoir Waterproofed with Truscon Waterproofing Paste Concentrated.

Write or 'phone for booklet "Science and Practice of Integral Waterproofing."

ancial interests—is epochal in American industry. It deserves, and promises to have, the full support of the entire industry. A full representation at the organizing meeting will be the best testimony to the country of the solidarity of construction interests in the new movement.

Full details of the plan are set forth in a comprehensive pamphlet, procurable from the temporary office, 1053 Munsey Building, Washington, D. C. The meeting will be held in the Washington Hotel. Mr. Hoover will preside.

TRADE SCHOOLS FOR SAN FRANCISCO

BY H. WARREN MCBRYDE

President, Industrial Association of San Francisco

For years the building industry of San Francisco as well as of every large city in the United States has been handicapped severely by the serious and growing shortage of skilled craftsmen—particularly plasterers, plumbers, bricklayers, tile-setters, steamfitters, sheet-metal workers and finish carpenters. This, despite the fact that in these crafts wages have increased steadily and working conditions have improved constantly.

Why, then, has the shortage occurred? One reason, of course, is that wartime high wages for unskilled work attracted many boys and young men. But the main reason is that union labor regulations have prohibited apprentices; in some cases entirely and in all cases almost entirely, in order to keep the union ranks so depleted that wages would be artificially kept up.

Not only has this produced great waste and inefficiency, but it likewise has contributed in a large way to the increased cost of building. Facing a constant shortage of craftsmen, contractors virtually have been forced to big against each other for their services—the bidding taking the form of officers of increased wages. Thus we find that in many cities certain craftsmen have been regularly receiving from fifty cents to two and three dollars above the union or other prescribed wage scale. This procedure has not created more journeymen to meet the needs of the situation. It has only meant substantially increased costs—which the contractors have transferred to the building public.

A further evil effect of the regulations prohibiting apprentices, has been to prevent thousands of boys and young men learning a trade. Literally thousands of American boys who, for economic or other good reasons, could not secure a college education, would have learned some useful trade but for the apprentice-prohibiting regulations of the unions.

Such conditions obtained in San Francisco for many years. They would prevail now but for the work done (and to continue) by the Industrial Association of San Francisco. As soon as the American Plan had been established in San Francisco, and an equitable wage scale had been fixed by the Impartial Wage Board (created by the Industrial Association) the Industrial Association gave its prompt attention to the matter of training apprentices. An arrangement was made whereby a group of boys and young men desirous of learning the plumbing trade was admitted to a special department of the city's evening high schools, and there received instruction in such subjects as sanitation, mechanical drawing, plan-reading, etc. It was found, however, that to relieve the acute shortage of plumbers, this method was too slow. Accordingly, within the next two weeks the Industrial Association—cooperating with the Master Plumbers Association—will open a special school for the training of plumbers' apprentices. It will be equipped with a work-room and a full complement of plumbing tools and supplies; and will be in charge of a thoroughly experienced master plumber. The instruction will cover education in the fundamental materials used in the plumbing business, and in local sanitary ordinances and requirements. The practical training will include caulking of joints, threading, tapping, reaming and pipe-cutting; the actual piping of a model house and the erection of fixtures such as basins, bath-tubs, toilets, sinks, wash-trays, etc. The instruction and training will be carried on in the school eight hours a day, five and one-half days a week, for a minimum of eight weeks, and possibly longer. Then those who have taken the training will be hired by master plumbers and put at once on jobs as apprentice-helpers. A committee of master plumbers will pass on the mechanical qualifications (i. e., the apparent adaptability to the plumbing trade) of all applicants for admission to the school. Also, no applicant will be accepted who does not measure up to a certain mental standard. It is believed that by virtue of this careful selection, and through employment of the intensive methods described, competent journeyman plumbers can be trained in a year—a saving of three years over the old method.

The Industrial Association's school for plasterers is already in operation and is a splendid success. The training of the first class (every member of which was required to meet a certain mental standard, as well as to possess good physical qualifications) is well under way. Under the direction of a thoroughly experienced master plasterer, it will continue, eight hours a day, five and one-half days a week, for twelve weeks. At the expiration of that time the members of the class will have a rudimentary knowledge of plastering. They will be placed on jobs at once, and with a year's experience will become full-fledged journeymen plasterers.

The Industrial Association also expects to open schools for apprentices in other crafts (metal-lathers, tile-setters, bricklayers, etc.,) in the order of the crafts in which the most acute shortage exists, so that an adequate number of competent journeymen may be secured. In all cases the applicants for admission to these schools will be carefully selected and their number so limited as to conform to the actual needs of the community. In this manner the Association expects to be able to protect the public and the crafts against the incompetency and disorder that would result if there was no selection of the personnel, or limitation of the number, of apprentices. And by establishing these schools, it expects thereby to give encouragement to the American boy who desires to learn a useful trade, and to insure permanent relief in San Francisco from the shortage of skilled workers in the various crafts.

SOME HINTS ON PAINT MIXING

BY E. O. JOHNSON, *National Lead Co.*

A few weeks ago, while in one of lower Broadway's finest office buildings, some redecorating was going on in the big foyer and I stopped to chat with one of the men on the job.

As I stood there, my painter acquaintance removed the lid from a can of paint and started to stir.

"What are you doing?" I asked in

amazement. "Can you mix up that paint that way?"

"Why, that's the way I always do," was the indifferent reply.

A week later, when I talked with the superintendent of the building, he pointed out to me the shiny spots here and there on that wall and I told him how the paint had been stirred up. The superintendent knew a good deal about painting himself and I didn't have to tell him that the oil should have been poured off and mixed a little at a time into the paint which had settled; "boxing" the paint from one receptacle to the other and using every precaution to get a uniform and homogeneous mixture of paint and oil.

Should Have Been Thinned

Not long after the incident just related, I stood watching a workman mixing paint for the window sashes of the new Cunard building a little further down the street. He had some light green paint and he had to match it to a darker green. He took a can of paste lampblack and dumped it in and began to stir. He pulled his paddle out of the paint and looked at it. The paint on it didn't show much change so, in went some more lampblack. Still the same result. The painter didn't stop to think that the black was lighter in weight than the green and so stayed at the top of the mitxure, adding little depth to the tone—also probably in comparatively large particles.

Straining the paint would probably have mixed the color in, but it would have left it a different shade than the painter figured on. If he had thinned his color with some turps before putting it on the paints, the black would have mixed in and straining it would not have changed the shade from that desired.

Now these two instances may seem surprising, because painters are supposed to know how to mix paint as well as apply it. Some of them do. Some of them, however, do not even know how to properly stir up a prepared paint. I think that if I were a building superintendent or a boss painter, I'd give every painter in my employ a little course of lessons to be sure he understood the fundamentals.

Tricks to all Trades

There are "tricks of the trade" for mixed paint and others for thining paste to painting consistency.

Keg white-lead is a fairly heavy paste and the first thing that must be done therefore is to thin it with more of the pure linseed oil which has already been used to transform it from a powder to a paste.

Let us suppose that we have a hundred pounds of white-lead and we want to add to it two gallons of oil and two gallons of turpentine. If we should mix the oil and turpentine and then put the entire hundred pounds of paste in and try to stir it up in that quantity we would find that the paste would probably remain in lumps; stir as we would, it would not mix properly with the liquid.

Consequently, as every painter knows, we first pour into a receptacle a very little of the oil and then put in the paste white-lead. With a strong wooden paddle stir and mix, thus working the paste lead and the oil together. A small quantity of oil added in this way softens the paste somewhat and when it has been thoroughly mixed and made uniform throughout we add a little more oil and stir again. We keep on adding oil a little at a time until the paste is sufficiently fluid to be easily stirred, but still is like a thin paste similar to colors in oil and not thin like a paint ready for application.

Color Tints

If any tinting color is to be added, thin the tinting color to about the same consistency as the semi-paste described above by adding oil or turpentine as required and adding to the white-lead a little at a time, stirring each application in thoroughly. Different makes of colors differ in tinting strength, and if we were to add all the color at one time we might get our mixture too deep. It is far better to add a little at a time, bringing it up to the color gradually. If this is done a perfect match is not difficult. A good scheme is to dip out from the white mass a small quantity before adding the colors to be used to lighten the tint in case too much color has been added. This will save making too much paint.

Adding Drier

A favored practice is to add the drier next. As it is very essential that this be well mixed through the paste, the method used should be as in the case of the oil and colors—that is, a little at a time, each lot being well stirred in. After the drier has been added then add the turpentine by the same methods as already described. Bear in mind that drier acts only on oil and should be proportioned to the oil—not to the total volume of the paint, nor even to the volume of the oil and turpentine.

To test the color spread a drop of the mitxure on a piece of clean glass, turn the glass over and look at the paint through the glass. The side of the paint film that is in contact with the glass will be perfectly smooth and may therefore be easily compared with another batch of paint by spreading a drop of the second batch alongside the sample from the first lot. The slightest difference between the two will be shown up by this method.

Paint is always improved by being allowed to stand a day before using. It should always be strained through a cheese cloth or a fine sieve shortly before it is needed for the job. This process eliminates the paint skins as well as any paint lumps or dirt that may have gotten into the mixture, and it also adds the final touch to a perfect job of mixing.

A good painter will follow these methods as a matter of habit. Good mixing is the foundation of any good paint job. Good work is impossible without good mixing. Keep in mind that turpentine is a thinner and evaporates—and that one quart of it in a batch of paint will thin the mixture about as much as two quarts of oil.

Turpentine Has Two Uses

Turpentine in paint has two uses. First, it penetrates the pores of the wood or plaster much better than does the linseed oil and thus enables more of the pigment to be carried into the pores of the surface. That is why some turpentine is nearly always used in priming coats. Second, it is frequently desirable to have more pigment in a paint film than would be obtained in a workable mixture in which the only vehicle was the linseed oil. Turpentine serves as a very handy agent in this case because after the paint has been applied the turpentine evaporates out and leaves on the wall the desired proportion of pigment and oil.

—*Architect and Engineer.*

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

STATISTICS FOR CONSTRUCTION

Index Reports Proposed as Prototype for National and International Service

SUBMITTED BY AMERICAN SECTION COMMITTEE ON CONSTRUCTION

*International Chamber of Commerce**

THE industrial and commercial world is just beginning to realize the importance of having in available form accurate statistical data and information concerning the principal industries of the world. The collection of data and the clear-cut analysis of national and international economic problems until recently have been haphazard and incomplete. All industries, and particularly the construction industry, realize the advantages to be gained by complete and accurate data.

There has never been a complete survey or analysis of the construction industry, which holds a close and interesting affiliation to the raw material markets of the world and has intimate association with an infinite number of the manufactured products. There is no doubt that through lack of authentic data and necessary information (which a careful study of such fundamentals as prices, market trends, stocks and materials available, transportation facilities, etc., could give), many of the industries whose products are used in construction have in the past suffered and are still suffering severely in their development.

World Survey Recommended

Accurate statistics will in the future prove to be the necessary foundation upon which all successful business will be built. It was with a realization of this that the American Section of the Committee on Construction ,at trehfiatsnnua eo?ldvb Construction, at the first annual meeting of the International Chamber of Commerce, in London, June 27 to July 1, 1921, offered the following resolution, which was adopted:

"WHEREAS, a Select Committee on Construction was appointed pursuant to the action of the Council on July 3, 1920, to study the proposition contained in the preambles and resolutions submitted by Mr. Willis H. Booth, relative to a study of the construction industry; and

"WHEREAS, that Select Committee has made a study of the matter thus submitted to it, the results of which study are set forth in Brochure No. 9, published by the International Chamber of Commerce, entitled "Construction," and

"WHEREAS, the Select Committee has referred the results of their study, as set forth in full in the said brochure, to the Production Group for examination and decision as to practical measures which should be taken in order that the International Chamber of Commerce may most effectively take action in the matter; and

"WHEREAS, the Production Group has examined the material thus submitted by the Select Committee on Construction and has also examined the program submitted by Mr. Noble Foster Hoggson and Col. John R. Wiggins, members from the United States of the Select Committee on Construction, as well as the memorandum submitted by the Italian members of the committee, all of which material is set forth in full in said Brochure No 9;

"Now, therefore, as a result of a study of the material and the recommendations thus submitted by the Production Group, this Congress commends and approves in general the program submitted by Mr. Noble Foster Hoggson and Col. John R. Wiggins and recommends that the Council take the following steps:

"1. Appoint a permanent committee to undertake a survey of the Construction Industry which shall proceed along the

---

*Report of the American Section of the Committee on Construction appointed to undertake a survey of the construction industry, pursuant to a resolution adotped at the first annual meeting of the International Chamber of Commerce, in London, June 27-July 1, 1921.

Committee—Noble Foster Hoggson, New York, chairman; Col. John R. Wiggins, Philadelphia, Pa., and Col, F. W. Abbott, Paris, France.

lines of collecting, collating and disseminating the vast amount of valuable data which is at present in the possession of such agencies as the British Engineering Standards Association; the Royal Institute of British Architects; the French Ministry of Commerce; the Office de Batiment in Paris; the International Bibliographical Institute of Brussels; the Advisory Committee of the American Federation of Labor; the National Federation of Construction Industries of the United States; the Associated General Contractors of America, and a number of similar agencies operating in different countries.

'2. Subject to the availability of funds which can be used for the purpose, provide a necessary staff for carrying out the work described above."

American Survey Begun

In line with the purpose expressed in this resolution, the American Section of the Committee on Construction has devised a plan to meet the requirements of the construction industry in America, and it is the hope and belief of the committee that the same plan with perhaps some modifications can be adopted to advantage in other countries.

If other member countries will put such a plan into operation and report to the headquarters of the International Chamber of Commerce, it will not be long before the hope of the Committee on Construction for a continuing survey will be realized.

It is very gratifying to be able to state that the Associated General Contractors of America, an organization representing 1,200 of the leading construction firms of the United States, has had the business foresight to see the value which the proposed Survey of Construction and Service Bureau will have for the construction industry in America, and beginning Oct., 1921, has put such a plan into operation. The first six month's work shows very satisfactory development and promise of increasing value and importance, not only to the constructors of the country but also to bankers, manufacturers, engineers, architects, technical schools, and editors.

Plan Applied to Construction

The Service Bureau is functioning in the following manner :

Functions of Service Bureau

a—Obtaining, assembling and correlating data of active interest to all branches of the construction industry.

b—Preparing and filing the original and analyzed data in convenient form for active use.

c—Studying interrelationships of such data and discovering their significance.

d—Presenting this data in graphic and tabular form with explanatory notes through weekly reports to those interested in construction in its various branches.

e—Acting as an information or service bureau for the construction industry, to furnish quickly special information as required by individuals.

Classes of Statistics Jresented

The principal classes of statistics which the bureau of the Associated General Contractors are collecting, follow:

Fundamental Construction Statistics

1—Materials of construction.
- a—Production
- b—Shipment
- c—Stocks
- d—Prices at mill
- e—Prices at point of consumption (Figures corrected occasionally showing resources by location and quantity)

2—Labor
- a—Number of people employed in the construction industry, by trades and locations
- b—Wages and hours
- c—Immigration and emigration
- d—Local labor agreement conditions

3—Products of Construction (By location and class of construction)
- a—Contracts let
- b—Building permits issued
- c—Value of contracts in progress
- d—Demand in near future

4—Transportation
- a—Cars in use
- b—Car shortage and surplus (by kind of car)
- c—Car loadings
- d—Ton miles
- e—Railroad earnings

5—Finance
- a—Interest rates
- b—Bank clearings and debits
- c—Bank deposits and reserves
- d—Exchange rates

6—Economics
- a—Wholesale and retail price indices
- b—Cost of living
- c—Stock market prices
- d—Ability to secure loans and charges for same
- e—Various indices of business activity as these affect construction

As far as practical this information is gathered regularly—weekly, monthly, or quarterly as the case may be—in order to interpret properly seasonal and local variations, note exceptions, and indicate trends.

Derived Statistics

On the basis of this and similar data, the bureau computes many derived statistics—some of them monthly, some quarterly or yearly, and some occasionally. Examples follow:
- a—Indices of construction costs for the country as a whole and for localities, subdivided into material costs and labor costs
- b—Production versus requirements.
- c—Costs to consumer versus production costs
- d—Effect of freight rates and costs
- e—Effect of immigration laws or labor supply
- f—Prospective adequacy of transportation facilities
- g—Prospective demands for construction (by kind and place)

Source of Data

The bureau utilizes to the fullest possible extent all existing agencies for the collection of data. It aims to be a collating and analyzing rather than a collecting agency. Existing sources fall into the following four classes:
- a—Governmental, Federal, State and Municipal
- b—Business publications
- c—Business associations
- d—Individual firms and corporation

Practical Value of Service

The practical value of the service of this bureau as it develops to individual firms interester in construction is unlimited. Not only may any firm interested in construction keep informed on the trend of prices, wages, costs, etc., in order to more intelligently size up their own individual problems, but actual service may be rendered in connection with such individual problems. Such service will require time and effort to perfect, but it is quite within reason to picture a central source of information on

Waterproof Stucco

Stucco should be waterproofed, because waterproofness eliminates most of the cracking and discoloration which otherwise takes place.

Cement stucco can be very successfully waterproofed with **Truscon Waterproofing Paste, Concentrated.** The Paste makes the stucco creamy and smooth working so that it is easily applied.

For full information write or call up our local office. They will be glad to send you specifications and full directions.

Proposals

ADVERTISEMENT FOR
ALTERATIONS AND ADDITIONS
MAIN SCHOOL BUILDING, MANUAL TRAINING AND INDUSTRIAL SCHOOL FOR COLORED YOUTH,
BORDENTOWN, N. J.

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct New Additions and Alterations to the present Main School Building at the Manual Training and Industrial School for Colored Youth, Bordentown, N. J., will be received by the Architects at the office of the Commissioner of Education, State House, Trenton, N. J., on June 28, 1922, at 3 P. M., Daylight Saving Time.

The work for which proposals are hereby invited covers the Alterations and Construction of two additional wings to the present Main School Building of the Manual Training and Industrial School for Colored Youth at Bordentown, N. J., complete, with Electric, Plumbing, Heating and Ventilating Equipments.

The additions consist of a wing at each end of present building extending out about 37 feet and being about 80 feet wide, being two stories and basement high. New Class Rooms will be placed in present Auditorium and a new entrance Portico constructed. The buildinig will have fireproof corridor and stair halls with the class room floors and roofs of heavy timber construction.

Bids will be received for the work under four separate contracts as follows:

1. For General Construction, which includes all Masonry, Carpentry, Steel and Iron, Roofing, Painting, and all work kindred thereto.
2. For Plumbing and Gas Fitting and all work kindred thereto.
3. For Heating and Ventilating and all work kindred thereto.
4. For Electrical Work and all work kindred thereto.

The right is reserved to accept or reject any or all proposals and to waive informalities. All bids must be in sealed envelopes endorsed "Proposal for Alterations and Additions, Bordentown Industrial School," and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of 5% of the bid or bond in like amount binding the bidder to execute a contract if awarded to him. The terms of proposal with Surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the Architects for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to the order of the State of New Jersey in the sum of $25.00. These plans may be obtained by application of Guilbert & Betelle, Architects, 546 Broad St., Newark, N. J. If plans and specifications are returned on or before the submission of estimates the check will be returned, but should the plans and specifications be not returned the deposit may become forfeited.

GUILBERT & BETELLE
and
ARNOLD H. MOSES,
Associate Architects.

Dated: June 10th, 1922.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., June 10, 1922.—SEALED PROPOSALS will be opened in this office at 3 P. M., July 10, 1922, for construction of the United States Post Office and Custom House at Apalachicola, Fla. Drawings and specifications may be obtained from the Custodian of the site at Apalachicola, Fla., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 376)

construction to which one may turn for immediate, accurate and reliable information on any subject affecting construction.

For example: A contractor proposes to bid upon a building job at Dunkirk, N.Y. Prices can be made available on materials and labor of practically all classes for some nearby large city such as Buffalo, N. Y. Special prices for steel can be had f. o. b. Pittsburgh. Mileage and freight rates can be readily secured. Costs of living for employees who must be sent to the job and maintained there can be ascertained. Interest rates charged by banks for loans such as might be obtained locally, with the contract as collateral, can be obtained. Reports of stock on hand at different points will indicate where probabilities exist of buying to the best advantage. Reports of unemployment will show possibilities of securing labor locally or at the nearby main centers. Reports of contractors let will indicate the amount of competition of labor and materials which can be expected. The number and value of building permits issued will indicate the possibilities of securing other jobs in the same district, so that overhead can be reduced and extra profit secured or minor reductions made in bids. Comparisons of statistics for various months will render the preparation of bids much easier in districts where bids have already been prepared some months previously, and where contracts are actually under way so that accurate comparisons can be made between the public statistics and figures secured in actual work locally.

In fact, with such a bureau functioning at full capacity, a contractor may ask for a report in such a case which, at slight expense, will give him invaluable information affecting his bid. Such service is being rendered in other fields of business. It remains only for the construction industry to develop a central agency to be able to have such advantages also.

Take another example: a terra cotta manufacturer wishes to decide as to the best market in which to concentrate his selling campaign; prices for various terra cotta products may be made available weekly for all the principal markets; car loadings will indicate by districts where car shortages have lately been experienced, and comparisons with previous years will show what seasonal variations are likely to occur; numbers and values of building permits over considerable periods will indicate cities and districts in which building has been active and where it has been inactve, but is increasing or likely to do so ;interest rates will indicate the amount of discount which the manufacturer must expect to meet if he discounts notes received from terra cotta purchasers in the local market; and similarly with the many questions which must be answered before a final decision is made.

Again, a business man desires to compare building costs in a certain community with those in adjacent cities and the country at large. Published quantity lists for building of various types, such as small residences, office buildings or manufacturing plants, are available in many handbooks. A few extensions and totalings secured by using the same quantities with building material and labor prices from the cities in question wil give an immediate answer to the question. If material prices are high, the statistical service can begin to investigate the reason by comparing stocks on hand at various points, the amount of unemployment, the wage rates, the cost of living, the interest rates, and other factors.

Results Obtained in Six Months

The point is that, with the wealth of information which now exists affecting construction, a bureau such as this, properly manned by specialists who are devoting their time to discovering all possible sources and data relating to construction, can give the industry immediate and reliable service which no single individual can attempt to provide. This service the Associated General Contractors of America has begun to develop. Under the direction of a university-trained economist and editor, and of a graduate engineer and statistician, the latter formerly Chief Statistical Officer of the General Staff of the United States Army, this service bureau has been established.

(Concluded Next Week)

As The Editor Sees It

STATISTICS FOR CONSTRUCTION

(Continued from Last Week)

Its first work has been to build up contact with all available sources and to start the accumulation o data relative to construction on which to base present and future analyses. From October 8 to March 25 inclusive, 25 reports, including from 150 ot 200 charts, diagrams and tables, with accompanying explanatory notes, have been issued.

A glance through the file of INDEX will indicate their nature; and it should be noted that not only general trends of costs, prices, wages, etc., are presented, but also very specific information which forms the basis for actual comparisons of conditions in particular localities, thus showing progress towards the time when specialized service of the most individualistic kind may be had.

The improved character and wide scope of such a service has been obvious as compared with the meagre information gathered by individual firms. The response from constructors has been very generous. Of the 1,200 members of the Associated General Contractors, approximately 200 from all parts of the country have already agreed to supply information regularly as to prices, wages, and conditions in their localities, on forms supplied by the bureau. Others have evidenced their interest by subscribing to the service at the annual subscription price. One contractor recently wrote that a single report had been worth the cost of the service for a whole year, and enclosed his check. Another wrote that the entire cost of his membership in the Association was justified by the service alone. Others have made requests for special studies applicable to their general field of activity such as building, highways, railroads, or public works construction, and these have been made.

Statistics Create Wide Interest

Naturally, the attention of others interested in construction has been attracted to the reports, and beginning January 1, 1922, subscription to INDEX has been opened to others than members of the Associated General Contractors of America. Architects, engineers, bankers, manufacturers, labor officials, and editors have expressed keen interest in the reports. As a result, one leading trade publication has developed a new department devoted to the statistics of the basic construction material which it represents, and another has enlarged the scope of its statistical work along the lines adopted by the bureau. Editors have asked for permission to reprint much of the material presented and special arrangement has been made with several to supply them with it regularly. The attention of the American Federation of Labor has been attracted by data presented relative to labor and especially by the analyses of construction wages and the cost of living, which have brought to light many discrepancies and furnished the basis for an intelligent and far basis of adjustment.

Engineers and architects are finding the data presented of value both in consultation work and in the preparation of estimates for clients, manufacturers in the analysis of market conditions and price trends, and in thte preparation of sales campaigns and sales literature. Bankers and allied interests are welcoming such statistical information specifically applied to construction, as an aid to them in determining the value of construction investments. Opportunity to take advantage of the service is being extended to ali other associations in the construction industry including contracts, sub-contractors, material manufacturers and dealers, real estate operators, and to chambers of commerce and the daily press whose interest in such information is obvious as part of their activity in inaugurating housing campaigns, accelerating public improvements and industrial development, and determining local employment and wage conditions. Several colleges and universities have also placed the service in their libraries for use in connection with their technical courses.

In these ways the bureau already is providing a better knowledge of construction conditions among those most directly connected with it, which will result in more accurate, and consequently lower, bids; and through the influence of the trade and

DRAWING MATERIALS

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

daily press a greater confidence in costs and prices is being engendered with the consequent restoration of public confidence and general prosperity.

World Service for All Industries

The experiment which is being tried out in the construction industry is capable of extension to all the major industries in America, including tetilexs, leather, metals, food-stuffs, furniture, mining, agriculture, etc., etc. To create a similar bureau in each industry, in line with Secretary Hoover's policy in connection with the Department of Commerce, and to pool the information and data in the department for the benefit of the whole country will inevitably be of immense value.

Similarly, the plan may be extended to other nations. If associations in England, France, Belgium, Italy, etc., similar to the Associated General Contractors of America, will assume responsibility for developing bureaus serving their particuluar industries, and in each country ultimately extend this to include all major industries, there would soon be developed, at comparatively slight cost, the foundations for a great international exchange of information through the International Chamber of Commerce. The possibilities for great industrial progress through such an exchange of information are unlimited.

The experiment which has been started here in the construction industry in America is only a beginning; but we hope it contains the germ from which may be developed the continuing world survey of construction which the Committee on Construction of the International Chamber of Commerce was appointed to undertake.

The Constructor.

ELECTRICAL DEMONSTRATION HOMES

Educating home builders to an appreciation of the comfort and economy possibilities of adequately wired houses has been undertaken in a most effective manner by many groups within the electrical industry.

The "Home Electrical" demonstrating what can be done to make a residence more truly convenient has been found a profitable undertaking in over seventy cities, and many other communities are now planning similar undertakings.

The Society for Electrical Development is in close touch with this movement and, through its field men, has assisted in conducting a number of such electrical demonstration exhibits. While local electrical interests, including the light and power company, electrical contractors and dealers, have generally initiated the movements, the co-operation of real estate men, decorators and furniture dealers have contributed much to the success of the plans. The electrical men arrange to conduct visitors through the home in small groups, explaining briefly the advantages of the wiring arrangements and of the electrical appliances found in the different rooms.

The majority of Electrical Homes are open to the public for a period of two weeks, although some few have remained open for as long as four weeks. The houses have usually been sold, completely equipped, during the period of exhibition. The price obtained has generally been higher than was expected, even considering the added equipment included.

Generally speaking, the Society for Electrical Development believes that every city of 25,000 or over offers a good field for an electrical demonstration home. There are 288 such cities or over 200 still to try the plan. Such an undertaking acts not only as a stimulant to more and better electrical equipment, but also materially increases interest in home building. Construction interests in the cities not yet putting in an "Electrical Home" are urged to capitalize this added method of interesting prospective home buyers.

WHAT ARE YOU DOING?

How many boys and young men are you placing in jobs to learn some branch of the construction business this June when school is out? No more healthful work is possible for a summer's vacation for the boy who has to work between school terms. If the proper interest is taken in his welfare by his employers a permanent asset for the construction industry may be created by making him want to continue in it after he completes school or college. Contractors and other employers in the industry can no longer shirk their responsibility for the increasing shortage of young men in their business.

Talk the successes that have been made in construction and business will be good. Every individual in the industry can do his part. Resolve now to help one boy this June take up a building trade and thoroughly learn it. He will be economically independent if he does. No matter what happens he can always earn a living if he knows a trade, particularly a building trade.

BOYS MUST BE FIT FOR BUILDING TRADE

In the Binghamton, N. Y., builders plan for recruiting and training apprentices and young men for the trades and work on construction now being developed the fundamental question of determining the boy's physical qualifications is not overlooked. Too many men take up lines of work for which they are not physically qualified. Recently in another city two men collapsed on the scaffold laying brick. Had a physical examination been required they would never have been passed for such work.

Builders in every community should have a group employment plan for finding out such facts about each worker. Rochester is finding its experiment on employment service and data on time lost is paying for itself in partially meeting the present shortage of men because the least amount of time is being lost by workers between jobs. Rochester only needs to add the physical examinative feature and expand their records to cover all trades and they will have a splendid system.

They might also add a safety committee of workers and a thrift plan to encourage the saving of a portion of the wage towards building a home or as a safeguard against old age to make the building trades as attractive as work in other industries.

E. W. Holmes, of the E. W. Holmes Pebble Dash Co., Princeton, Ill., which can boast of three hundred stucco houses and not one complaint, says:

The underlying cause for success is gained only through using the right materials and doing the work to the best of your ability. If you keep this in mind, you need not worry about the sales results—you are bound to win. There is no better advertisement than a successful job to show the prospects, but to show other prospects it is necessary to advertise and advertise all the time.

Waterproof Stucco

Stucco should be waterproofed, because waterproofness eliminates most of the cracking and discoloration which otherwise takes place.

Cement stucco can be very successfully waterproofed with **Truscon Waterproofing Paste, Concentrated.** The Paste makes the stucco creamy and smooth working so that it is easily applied.

For full information write or call up our local office. They will be glad to send you specifications and full directions.

Proposals

ADVERTISEMENT FOR
ALTERATIONS AND ADDITIONS
MAIN SCHOOL BUILDING, MANUAL TRAINING AND INDUSTRIAL SCHOOL FOR COLORED YOUTH,
BORDENTOWN, N. J.

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct New Additions and Alterations to the present Main School Building at the Manual Training and Industrial School for Colored Youth, Bordentown, N. J., will be received by the Architects at the office of the Commissioner of Education, State House, Trenton, N. J., on June 28, 1922, at 3 P. M., Daylight Saving Time.

The work for which proposals are hereby invited covers the Alterations and Construction of two additional wings to the present Main School Building of the Manual Training and Industrial School for Colored Youth at Bordentown, N. J., complete, with Electric, Plumbing, Heating and Ventilating Equipments.

The additions consist of a wing at each end of present building extending out about 37 feet and being about 80 feet wide, being two stories and basement high. New Class Rooms will be placed in present Auditorium and a new entrance Portico constructed. The buildinig will have fireproof corridor and stair halls with the class room floors and roofs of heavy timber construction.

Bids will be received for the work under four separate contracts as follows:

1. For General Construction, which includes all Masonry, Carpentry, Steel and Iron, Roofing, Painting, and all work kindred thereto.
2. For Plumbing and Gas Fitting and all work kindred thereto.
3. For Heating and Ventilating and all work kindred thereto.
4. For Electrical Work and all work kindred thereto.

The right is reserved to accept or reject any or all proposals and to waive informalities. All bids must be in sealed envelopes endorsed "Proposal for Alterations and Additions, Bordentown Industrial School," and stating the branch of work covered. No bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of 5% of the bid or bond in like amount binding the bidder to execute a contract if awarded to him. The terms of proposal with Surety required are fixed by the specifications.

Copies of the drawings and specifications will be on file at the office of the Architects for the purpose of estimating. A limited number of copies of the plans and specifications will be loaned to the prospective bidders on deposit of a certified check to the order of the State of New Jersey in the sum of $25.00. These plans may be obtained by application of Guilbert & Betelle, Architects, 546 Broad St., Newark, N. J. If plans and specifications are returned on or before the submission of estimates the check will be returned, but should the plans and specifications be not returned the deposit may become forfeited.

GUILBERT & BETELLE
and
ARNOLD H. MOSES,
Associate Architects.

Dated: June 10th, 1922.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., June 10, 1922.—SEALED PROPOSALS will be opened in this office at 3 P. M., July 10, 1922, for construction of the United States Post Office and Custom House at Apalachicola, Fla. Drawings and specifications may be obtained from the Custodian of the site at Apalachicola, Fla., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

INCREASED SALES and PROFITS

YOUR business and profits can be increased by selling direct to buyers that you know are in the market to buy products or service that you have to sell.

We tell you WHO is in the market and WHERE to secure the business, with our reliable advance information.

DAILY BUILDING NEWS advises you (1) WHEN PLANS ARE IN PROGRESS. (2) NAMES AND ADDRESSES OF DESIGNERS AND OWNERS. (3) WHEN BIDS ARE BEING TAKEN. (4) NAMES AND ADDRESSES OF THOSE FIGURING. (5) THE LAST DAY FOR FILING THE BIDS. (6) NAME AND ADDRESS OF SUCCESSFUL CONTRACTOR, in Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

Hundreds of firms vouch for the value of DAILY BUILDING NEWS SERVICE and 90% of them renew year after year. 12 years of success back of the Daily Building News.

A single order or contract will repay the investment many times.

The information is so valuable and the investment so very nominal, we want you to know more about it.

SIMPLY CUT OFF AND MAIL THE COUPON. IT WILL NOT OBLIGATE YOU

As The Editor Sees It

DISCUSSING Reduction of Unemployment in the Construction Industry, A. P. Greensfelder, Secretary, Fruin-Conlon Contracting Co., St. Louis Mo., contributed valuable and timely data for consideration in an address read at a recent meeting of the National Federation of Construction Industries. Mr. Greensfelder writes:

One of the most costly and serious problems of our whole construction industry is due to unemployment—both of capital and labor. We are apt to think of idleness only in terms of man power, but as capital can only produce and wealth increase by the application of that man power, it behooves us to realize that their interests are common. We must further remember that unless the laborer earns, he has but little to spend and his demand for goods and shelter produce the insistence for the supply which capital helps create.

The construction industry of all our industries, next to agriculture, has been possibly the least concerned and yet the most affected by unemployment. We seem, until quite recently, perhaps, to have taken it for granted that because field construction is largely conducted out of doors, it must necessarily be governed by the weather and conditions incident thereto. Summer sunshine has been and still is overcapitalized. Because field construction seldom has a roof over its factory we fail to view it as a producing factor of the same potentiality to equal capital invested within an enclosure.

When a construction project is idle for any cause the invested capital is idle, the allotted workers are unemployed and the producers and conveyors of construction materials are seriously interrupted. The total cost of this unemployment is a vast sum necessarily added as a wasteful annual expense to the whole industry and each integral part. A valuable attempt to measure such waste in the building industry is noted in the study initiated by Secretary Hoover, through American Engineering Council last year. Mr. Sanford E. Thompson, Consulting Engineer of Boston, who applied the principles of industrial waste to the building business in such printed report, calls particular attention to this irregular employment and the expenses caused thereby. He states that due to an average of only 190 working days a year for field construction the loss to the nation from the cause alone is approximately $100,000,000, annually. If we add to this the interest during construction, the idle labor material and transportation facilities of dependent quarries, mills, shops and ways, the total loss is enormous.

Can the construction industry be so blind to its own self interest as well as its duty to the nation not to realize the necessity of reducing this burden? Cannot brick makers, steel producers, railroad men, designers, contractors and laborers realize that continuous employment means better annual earnings and yet cheaper production? Cheaper prices mean greater demand and this in turn enables continuous employment. Reduced costs per cubic foot of structures, be they stores, schools or houses, means increased volume of demand. Homes at $1,000 per room will create more than twice the demand than the same values at 50 per cent. increased cost.

Having diagnosed the disease and the public burden thereof, let us study the causes and endeavor to provide available remedies. The principal causes are (1) seasonal fluctuations, (2) bad weather, (3) labor strikes and lockouts, (4) inefficient management and (5) restricted production. Careful analysis of each of such causes, resolute endeavors to correct them and an earnest spirit of co-operation will gradually produce results. Some results of large measure can undoubtedly be secured within one year and others will rapidly follow as the movement progresses. Seasonal fluctuations are largely because of old-fashioned customs. Before the days of mechanical field equipment, construction progress throughout the year was seldom contemplated. Today such reasons do not control. Land values and production demands for floor space now outweigh minor variations in seasonal costs and a proper educational campaign through concerted nationally directed advertising can do wonders.

DRAWING MATERIALS

BLUE PRINTS

"Winter made buildings" can be made just as popular as "summer made rice." A "Plan Early" crusade can be made equally effective as a "Winter Let Contract" by proper inducements of seasonal discounts in material prices, freight rates, wages and the superimposed planning, supervising and financial commissions.

Bad weather is purely a relative condition and much good can be mixed with it. Ordinary winter temperatures can be easily moderated by the judicious application of heat and wind, snow and rain can be excluded by canvas and common sense. If $1,500 is a fair annual wage for skilled labor this may be earned at the rate of $7.50 per day for 200 working days or at $5.00 daily for 300 days. Mr. Henry Ford had thoroughly demonstrated the latter rate is sufficient, highly profitable to himself and tremendously useful to the public. Competent labor can be attracted to low turn-over industries when fairly paid and cared for. Bricks, steel and lumber do not freeze—only fingers and mortars for an average of twenty days and the cost of applying gloves and anti-freezing remedies is relatively small in most United States latitudes as compared to the "unearned increment" lost in waiting. The cold weather differential is only a few per cent. and can be readily offset by reduced prices or one-half hour longer labor per day for winter months.

Labor strikes and lockouts are human factors needing the sunlight of broad self-interest, food of facts and careful competent and co-operative nursing to cure them of their cancers. The National Board for Jurisdictional Awards in the Building Industry, so well described in the Nation's Business for April by President Bent of the Associated General Contractors, is evidence of possibilities and practical results in eliminating strikes. Industrial labor boards in factory, field and nation can largely reduce unemployment due to labor disputes. It is estimated that 500 strikes and lockouts a year waste 3,000,000 man days alone in field construction, exclusive of probably larger figures for production of construction materials. Employers and employees should jointly study the labor problems and their true relationships if we are to progress in skill, safety and satisfaction in this industry. The public is learning that it pays the "bill of costs" for every effective "bill of rights," and as soon as it obtains the correct figures it is beginning to demand each industry must either arbitrate all its labor differences or it will be done for them in legalized industrial courts. Let us lead the way, and raise facts instead of factions in the construction industry.

Inefficient management is a real tangible producer of unemployment and is a man-sized job to tackle. Production analysis may be a new term to the construction industry, but it is a vital element in the elimination of waste. Production schedules planning, routing and expediting materials so as to avoid delays and shut-downs are real responsibilities of managers. Proper maintenance of plant and machinery not only prevent break downs and labor lay-offs, but pay dividends well worth the earning. Employment managers must be made if they cannot be found, because labor turnover rates in the industry are a disgrace not only due to the previous cases, but due to the irate desire of pin-headed bosses to exercise and show their authority. Transferring men to the right jobs is better than firing, and nothing is quite as needless and expensive as training and hiring. Let us determine a fair day's work for a fair workman and a fair day's pay will soon take care of itself.

Restricted production is largely the result of unenlightened labor. Discouraging experiences of piece work, price reductions and replacement by machinery without consideration of the employer, has undoubtedly had its effect on labor in its attempt to avoid unemployment by restricting production. Discouragement of apprentices, restricting output of skilled men and reducing dilution by unskilled labor all have been influenced by the dread or fear of unemployment. Organizations of labor are perhaps more often formed to combat such practices than to protect themselves against wage reductions, but that they have gone to the other extremes in many cases, especially in the last few years, is needless to say. Vocational training simultaneous with apprenticeship, profit sharing, insurance for accident, illness, unemployment and old age are possibly measures for investigation in order to remove the fear of hunger and instill a recognition of real pride and craftsmanship both in quantity and quality production.

The National Federation of Construction Industries, as an organization, has a real function in such an enterprise. They must blaze a trail and solve such problems from an industry standpoint. They must bury the desire of any individual element to shine at the expense of others, but must form a governing council equally representative of the designers, constructors, material producers and fabricators and possibly labor. The voting power of each group must be equal, the leadership automatically revolving through each group and this would develop a sense of equal responsibility, justice and desire to raise the standards of the industry as can be accomplished in no other way.

The Federation has served a real purpose in arousing a sense of true proportion in this the second industry in our Nation, and President Trigg has merited much praise for his arduous and useful efforts to raise this child of Industry. Now, however, since it is in the prime of its youth, let it go forth to bigger things, better deeds and a brighter future.

As a part of a nation-wide campaign designed to foster the use of more permanent materials in building, the Copper and Brass Research Association has announced a contest for school children and others, offering cash prizes for the best photograph showing the relative durability of materials which go into the construction of American homes.

Some idea of the cost to this country of the practice of building for speculative profit rather than for use is evidenced by the result of a statistical study just completed by the Copper and Brass Association. The fire loss on the 21,000,000 American homes, insured as they are for a total of $91,700,000,000, is about $35,000,000 a year, based on figures for 1918 to 1920, inclusive. The rust bill, covering the renewal of sheet metal work, principally leaders and gutters, plumbing pipe, hardware, etc., is annually twenty times that sum.

The effort to show the public the wastefulness of the use of materials which need early and frequent replacement, is a part of the present intensive campaign of the Copper and Brass companies of the country to increase the use of those metals in domestic consumption. The photographic contest is a part of that campaign.

Fourteen prizes ranging from $150 to

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Residence, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Charles Schultz, care of architect. Brick, 2½ stories, 24x46 feet, slate roof, hardwood floors, steam heat el,ectric light, tile work. Architect taking bids due July 30th.

Residence, Pitman, N. J. Architect, Charles R. Peddle, 136 South Fourth street, Philadelphia. Owner, W. S. Slack, Pitman, N. J. Frame, 2½ stories, 28x23 feet, shingle roof, oak and pine floors, warm air heat, electric light, iron work. Architect taking bids due July 1st.

High School, Bridgeton, N. J. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, Board of Education, Bridgeton, N. J. Lowest bidders: J. S. Rogers Co., Drexel Building, Philadelphia, $157,500; Moore & Co., Nineteenth and Cherry streets, Philadelphia, $160,755. Electric, Baird Osterhout Co., 2109 Walnut street, $2,650. Heating and ventilating, J. H. Hutchinson, 1020 Callowhill street, $23,194. Plumbing and gas fitting, R. J. Hoban, 261 South Twenty-first street, Philadelphia, $9,173.

Armory, Salem, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owners, State of New Jersey, care of Commissioner Burdotte G. Lewis, Institutions and Agencies, State House, Trenton, N. J. Brick and steel, 2 stories, 92x24 feet and 52x28 feet, slag roof, concrete and pine floors, tile work, bond, floor hardener, terra cotta, ornamental iron work, waterproofing. Lowest bidder, Monaghan & Losse, Inc., 3016 Chestnut street, Philadelphia, $51,094.

School, Egg Harbor, N. J. Architect, F. F. Sanders, 39 South Seventeenth street, Philadelphia. Owners, Board of Education, care of William Townsend, president, Egg Harbor, N. J. Brick, stone and steel. Preliminary plans in progress.

Road Work, Borough of Audubon, N. J. Engineer, J. J. Albertson, Court House, Camden, N. J. Owners, Borough of Audubon, H. K. Lawrence, Borough Clerk, Audubon, N. J. Excavation and concrete paving (approximately 35,000 square yards) and 1,500 lineal feet of 6-inch terra cotta tile drain. Owners taking bids at Commissioners' Chambers, Schoolhouse No. 2, Wyoming and Mansion avenues, Audubon, N. J., June 27th, at 8.30 P. M. Deposit, $5.00. Address bids to John W. Zanger, Director of Highways, 342 Merchant street, Audubon, N. J.

Sewerage System and Disposal Plant, Woodbury Heights, N. J. Engineers, Remington & Vosbury ,601 Market street, Camden, N. J. Owners, Borough of Woodbury Heights, H. J. Murgrauer, Borough Clerk, Borough Hall, Woodbury Heights, N. J. Approximately 4.21 miles of 5 to 12-inch terra cotta pipe sewers and house connections, 35 manholes, 5 flush tanks and a sewage disposal plant. Owners taking bids due June 29th at 8 P. M., Daylight Saving. Deposit, $10.00. Refund, $5.00.

New Jersey Contracts Awarded

Lodge Building, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Knights of Columbus, care of G. W. Goff, 221 North Warren street, Trenton, N. J. Brick, fireproof, 3 stories, 75x80 feet, 80x120 feet, slag roof, hardwood floors (heating, plumbing, electric work and elevators reserved), hollow tile, tile and marble work, safety treads, roof ventilators, skylights, fire doors, waterproofing, iron stairs, ornamental iron work. Contract awarded to Charles J. Smith, 202 Academy street, Trenton, N. J.

Warehouse, Titus avenue and Railroad, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Gross Brothers, Inc., 243 North Broad street, Trenton, N. J. Reinforced concrete, brick and steel, 3 stories, 115x42 feet, irregular size, slag roof, concrete floors, roof ventilators, dampproofing, terra cotta, iron work, floor hardener, rolled steel sash and doors. Contract awarded to Karno-Smith Const. Co., Broad Street Bank Building, Trenton, N. J.

Store (add.), 161 South Broad street ,Trenton, N. J. Architects, Klemann & Kaplan, First National Bank Building, Trenton. Owner, Bernard Tobish, on premises. Brick, 2 stories, 20x60 feet, slag roof, pine floors, hollow tile, steam heat, electric light, metal lath, rolled steel skylights, roof ventilators, metal ceilings. Contract awarded to Nathan Milgaten, 550 South Warren street, Trenton.

Garages (13), 612 West State street, Trenton, N. J. Architects, Klemann & Kaplan, First National Bank Building, Trenton. Owner, Bernard Tobish, 161 South Broad street, Trenton, N. J. Brick, concrete, 1 story, 125x20 feet, slag roof, concrete floors, steam heat, electric light, floor hardener. Contract awarded to Nathan Milgaten, 550 South Warren street, Trenton, N. J.

Store, Apartment (alts. and add.), 220 North Broad street, Trenton. Architect, R. G. Consolloy, Commonwealth Building, Trenton, N. J. Owner, George Hornketh, 631 Princeton street, Trenton, N. J. Brick, 3 stories, 75x16 feet, slag roof, tile and hardwood floors, hot water heat, electric light, tile work, hollow tile, rolled steel skylights, waterproofing. Contract awarded to J. Purks, Trenton, N. J.

Residence and Store, North Clinton street, Trenton, N. J. Architect, R. G. Consolloy, Commonwealth Building, Trenton, N. J. Owner, Bernard Cooper, 505 North Clinton street, Trenton, N. J. Brick, 2½ stories, 41x19 feet, slate roof, hardwood floors, hot water heat, electric light ,tile and marble work. Contract awarded to Nathan Milgaten, 550 South Warren street, Trenton, N. J.

School, National Park, N. J., $26,896. Architect, Charles H. Peddle, 136 South Fourth street, Philadelphia. Owners, Board of Education, Borough of National Park, N. J. Brick, cut stone and steel, 2 stories, 59x39 feet, slag roof, pine floors, safety treads, metal lath, iron work. Contract awarded to Wills Bill Co., 1706 Sansom street, Philadelphia.

Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., June 19, 1922. Sealed Proposals will be opened in this office at 3 P. M., July 19, 1922, for restoration of stone cornice and replacing of roof construction, etc., for the United States Post Office and Custom House, at Oswego, N. Y. Drawings and specifications may be obtained from the Custodian at Oswego, N. Y., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Miscellaneous Construction News

Community House (alts. and add.) and Gymnasium, Baltimore, Md. Architect, Louis Levi, Real Estate Trust Building, Philadelphia. Owners, Madison Avenue Temple, Baltimore, Md. Brick, steel and stone, 4-story add., 21x65 feet, to building 63x65 feet, gymnasium 54x63 feet. Plans in progress. Too early for details.

Stores and Apartment, Binghamton, N. Y. Architect, G. T. Price, Miller Building, Scranton, Pa. Owners, Corlass Brothers, Binghamton, N. Y. Frame, stucco, 2 stories, 48x72 feet ,slag roof, pine floors, steam heat, electric light, plate glass, skylights, roof ventilators, metal ceilings. Architect will take revised bids July 5th.

(Continued from page 408)

$10 will be awarded for photographs of copper and brass objects of utility or ornamentation which to qualify must have have been in use more than 35 years. Included are copper roofs, brass door knockers, old copper cooking utensils, brass plumbing pipe. Fourteen additional prizes of similar amounts are offered for the best photographs showing the results of using substitutes for copper and brass.

AVOIDING CONCRETE FAILURES

A Few Practical Points on Obtaining a Successful Sidewalk Job

BY DALE VAN HORN

Today, with good cement on the market and its use past the experimental stage, what is to account for the large number of concrete sidewalk jobs which fail? Almost invariably, it can be traced to one or more of three or four things. If done in freezing weather there may have been lack of necessary precaution to guard against the damaging Jack Frost. Again, it might have been due to dirty aggregates, imperfect bonding, improperly constructed bases and foundations, or again the joints may have been hastily cut and failed to extend through all of the concrete. In other words, any one omission of several necessary steps in the construction of sidewalks will result in total or partial failure and eventual repair work. Good materials, proper methods carried out and careful workmanship are necessary qualifications for the construction of sound and lasting walks.

Aggregates selected should be inspected closely and only those presenting a hard and flinty surface should be used. The reason why pit sand and gravel fail to make good is because many of the particles have a fine coating of clay or dirt on their surfaces. This keeps the cement mortar from bonding with their surfaces and thus leave voids, later to become filled with water, and, when freezing weather approaches, the two split apart. Materials which show foreign matter clinging to them should be avoided, or thoroughly washed.

In the Middle West a common practice is to use sand and gravel entirely. These materials are all right for the top coat, but cement can be saved and a stronger bed obtained, if hard crushed rock is used in this step. Gravel or even sand does well for the top. It is to be understood that gravel is not to be omitted from the base, but that stone is to be used with it.

The foundation should be so constructed that it will not settle, but remain firmly rigid and at the same time offer a natural drainage for any water which might collect under it. In some localities, it is even necessary to provide artificial drainage where the soil is heavy and low. In this case, tile drainage lines are run at the outside of the walk to some natural outlet. Fills which have been improperly constructed and poor subbases are the cause of a lot of inferior walks.

One of the common results of a poor foundation is a crack which runs, often through the center of the walk for a considerable distance. This fact alone may not make it necessary to rebuild the walk. But weather changes, the action of freezing usually expand minute cracks to a width of an inch or more and the wider they become, the more chance the elements have to work. In time earth lodges there and soon a narrow ribbon of grass or weeds divide the walk. But worse of all, it will be only a matter of time until the whole will be in such a state that replacement becomes necessary.

In laying the walk the wood spreaders should be replaced every seventy-five feet or so with a thin metal strip of the same size or even a wood lath of one-half inch thickness. When the walk has been finished, this strip is removed and the space filled with asphalt or tar, thus forming a natural expansion joint. Unless this precaution is taken there is imminent danger of heaving where two cakes are forced upward, due to the end pressure.

A wood float or wood trowel is the best tool with which to finish the top. The steel trowel is popular, but nevertheless, it leaves a surface easily made slippery and very often fine hairline cracks occur, not unlike incipient cracks. These fine cracks occur because the steel trowel leaves a film of pure cement which contracts upon hardening and drying.

If the top is to be laid after the base has hardened considerable care should be exercised in applying it. Water under pressure from a hose should be played on the surface until all free and foreign matter has been washed away. Then a creamy mixture of cement and water is applied and worked in. To this may then be applied the top.

Trees which are to be surrounded with concrete should be given at least six inches on all sides. The space within can be filled with sand.—*Building Age.*

THE ARCHITECT

BY A. C. WOLF

To write fully about the architect is an endless task and I shall therefore touch only the more essential things required of him. His requirements as an architect are something more than the mere planning of the problem. To understand the architect and his problems, we must define what he is.

There can be no better definition than the following: "The artist who composes buildings, determines their proportions distributions and decorations, directs their execution, and controls the expenditure upon them."

With this definition before us, we see that the first and foremost of the requirements is that the architect must be an artist. The term artist does not necessarily imply a painter, but one who is delighted in his work for its own sake, yet never satisfied with it because of the desire to reach a higher state of perfection. A man of untiring endeavor to attain his dreams, insomuch that he gives willingly all the time and pains necessary to achieve the smallest improvement in his work. One who will not permit the words "it will do" and "good enough" in any part of his organization.

With the qualification of an artist he has only the foundation required and necessary for becoming an architect. With art we must combine technical skill, as his creative gift will be of little use if he has not the constructive ability that will enable him to carry his vision to maturity. The range of obstacles that now appears between the eager artist and the promised land of his dreams quite often indeed causes him to become discouraged, and either he turns to something else which he believes to be easier—or, he becomes determined to overcome the obstacles as they present themselves.

He must train himself so that he can create things, not as they exist, but as he would have them be. Mathematician he must be so that he may calculate. He must also master all the different trades. This requires him to become mason and bricklayer, painter and carpenter. The workers of all trades must give to him knowledge of their crafts. He must not rest till he has studied all the mysteries of materials.

Somewhat of an engineer he must be, in these days of tall buildings with steel for the frame, as he is required to know its great possibilities, and limitations. Sanitation comes within his scope, as he must arrange all sanitary equipment, no

detail shall he neglect as to pipe, trap, joint of fitting, his knowledge must be such that he can supervise properly. He must be able to advise on all matters pertaining to public health; and plan so as to guard against sickness and disease.

To all of the above, which are some of the most important requirements, we have yet to add another. All the knowledge which he has attained may be to his disadvantage and undoing, if it is not supported by the solid sense and reasoning commonly called "business ability."

This phase of an architect's being is entirely different than the others, as it differentiates him from the art crafts. His position when entrusted with an important commission is entirely different from those of the painter or sculptor. They produce their work at an agreed price which closes the transaction! A very simple matter as far as finance is concerned.

But the architect, from the moment he is awarded the commission, and building contracts are signed, has vast sums of money at his disposition, disbursed by his direction. No one can tell until the work is completed and an accounting made whether he has wisely and honestly acquitted himself and obtained full value for the moneys expended.

To prolong this article would weary the reader. I could write more of the necessary knowledge of accounts; familiarity with the law, as regards the drawing of contracts, the complexities of building codes, etc., of the need to be able to express ones views clearly, whether in writing or in speech.

After reading this you will say that these requirements of the "architect" are but a dream, that so many accomplishments cannot be crowded into a few years of life. This may be true of none of them, as they are, but it may stand for all of them as they would be.

Building Industry.

THE SHINGLE ROOF

BY A. ASHMUN KELLY

Is the good old shingle roof doomed? Are the imitation shingles taking the place of the real wooden shingles? To a large extent this is just what is happening. Gradually the various widely advertised asphalt and metal shingles are superseding the cedar and redwood shingles. It is a large subject, and cannot be covered in a restricted magazine article. But it may be that a few words on the subject will interest those who have to do with roofs and roofing materials.

Wooden roofs have the disadvantage of not being fireproof. But they can easily and cheaply be made so. Any coating or stain that will prevent combustion from a cinder or small spark long enough to prevent a flame will do. Even so simple a thing as lime water will do. But the best way is to dip in a good stain, for this will not only render the wood fireproof, but it will also prevent rot, and extend the life of the roof many years.

Creosote stain is the ideal one for shingles. And the shingles should be dipped two-thirds their length. This insures a perfect coating for all parts that will be exposed. Then a brush coat of the stain after the shingles are laid will be a great help, though it is not essential to effective work.

Creosote stain makes it rather costly shingling. But it will pay the client who has it done. One gallon will give two coats of stain to 100 square feet of shingles. When dipped two-thirds their length, 2½ to 3 gallons of stain will coat one thousand 4x16 inch shingles.

Shingles should be perfectly dry before staining, but I have had perfectly good results where I have dip-stained shingles that were not dry, and where I had to throw them into a pile with some rain falling; and placed on the roof before the stain was dry. But this is not advised if it can be avoided. The idea is, that when the shingle is dry it will take up more stain. As the stain is oily the water does not have any effect, unless under the stain. That is why the wood should be dry.

A high grade creosote stain may be cheapened by adding three gallons of water-white 150 deg. test oil, and one gallon of Japan drier to each three gallons of creosote liquid. Crude oil, and the other petroleum or mineral oils do not unite readily with creosote oil, although such liquids are used for the purpose of doping creosote stain. Such doping is not advised as it ruins the creosote as a stain, but painters do sometimes resort to the practise instead of getting a better price for their work. And when it is necessary to thin out creosote stain it is better to use raw linseed oil for shingles, and turpentine for inside staining. Such thinning is not often needed as the stain is right when bought, though by not keepng it well stirred while dipping the heavier part will settle and then will require thinning to reduce it.

Creosote burns the flesh, that you of course know; better rub the hands and wrists and maybe the face with linseed oil before beginning. If the stain does get on hands or face, don't try to rub it off, but apply linseed oil. after which you can rub the part off. Rubbing it while the fresh creosote is on the flesh will only spread it the more. Do not wash it off, for that will simply separate the tar acids and burn you the worse; creosote contains about 10 per cent. of this acid.

Creosote stain will get rather thick in cold weather, which is owing to the small quantity of naphthaline that it contains. When in this condition heat it a little or put it in a warm place for a time.

Ordinary oil paint is not thought to be good for shingle roofs, but by using a very thin oil paint stain, and dipping the shingle very satisfactory results may be obtained. Or the shingles may be done after laying, same as with creosote. The paint stain should be made from the best pigments. They should be finely ground in raw linseed oil, at the mill of course, and creosote may be stained too with such colors; in fact that is the way the colored creosote stains are produced. Only that the creosote will of course alter the tone of the pigment stain. Yet they will give very nice shades of color.

Raw and burnt sienna and raw and burnt umber are two fine pigments for stains, especially for the creosote stains. But the only green pigment that can be used is the chemically pure, not the green that is made by mixing yellow and blue together. This applies also to the reds, except the oxide reds. They should be chemically pure colors, without any aniline in them. This for permanency, as aniline colors will soon fade in the sun.—*Building Age.*

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty two times in the course of a year.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

As The Editor Sees It

In opening the organization meeting of the American Construction Council at the Washington Hotel, Washington, D. C., Secretary of Commerce, Hoover, stated that "If we would stem the tide tending to refer every little need and complaint to government, action to meet these demands must arise from within industry itself." He declared that in thus bringing all representatives of the construction industry together to see if such a council can be organized the most important step in the history of industry was being taken.

Among the subjects suggested by Secretary Hoover for the consideration of the Council were standardization of grades, inspection of, and simplification of dimensions of construction materials, the collection of statistics, the encouragement of home building, zoning, proper building codes, seasonal and intermittent employment, jurisdictional disputes, apprenticeship, vocational training and in general the elimination of unnecessary speculation and the better functioning of industry in regard to our national needs.

A warning against "an intense stratification of the various economic interests in our national life" which lead to selfish aims and purposes was voiced by Willis H. Booth, Vice President of the Guaranty Trust Company, of New York, in following Secretary Hoover. If the public confidence is to be gained the aims and purposes of the Council must square and comport itself entirely with the best public judgment, he said. He denied proposing an impractical altruism which was not consistent with actual facts but declared such a basis was "an enlightened kind of selfishness which will take us further because it is more nearly right." Illustrating his point he went on to say "If we can surround the construction industry with a feeling of stability we immediately add to its ability to secure credit." This feeling of stability, he stated was based on the confidence which the public gave to the industry.

Following the opening addresses, five minute responses were made by Henry H. Kendall, Architect, Boston, Mass.; Thomas H. MacDonald, Bureau of Public Roads, Washington, D. C.; Calvert Townley, Westinghouse Electric and Manufacturing Co., New York; Frederick L. Crandford, Brooklyn, N. Y.; John R. Alpine, Grinnell Company, Providence, R. I.; John Donlin, Building Trades' Department, A. F. of L., Washington, D. C.; M. T. Bannigan, McQuade and Bannigan, Utica, N. Y.; William McClellan, McClellan & Junkersfeld, New York City; Ralph F. Proctor, Maryland Casualty Co., Baltimore, Md.

The afternoon and evening sessions were devoted to the presentation of the report of the Operating Committee on Organization by General R. C. Marshall, Jr., General Manager of the Associated General Contractors of America, a discussion of the proposed by-laws by the ten major groups representing all elements in the industry, into which the Council has been divided, and the election of the Executive Board.

Two hundred representatives of every element of the industry were in attendance at the meeting, including architects, engineers, general contractors, sub-contractors, labor, manufacturers, dealers, bankers, insurance and bond interests, public utility corporations, state, federal county and municipal construction departments.

At the organization meeting of the American Construction Council, M. T. Bannigan, President of the National Building Supply Dealers Association said: "We went to war to prove that might did not necessarily make right. We are organizing this Council to establish the principle that the good of any element of the construction industry depends upon the good of every component part of the Industry."

Henry H. Kendall, Past-President of the American Institute of Architects stated that the Architects were happy to be among those who are participating in the organization of the Council.

"We see in it potentialities far beyond its present capacity," he said, "and we hope soon to see them realized in actual achievements. We shall gladly give to it our best efforts and co-operation to achieve these so much desired results.

BLUE PRINTS

"We are to bring together a group of men, vitally interested in different phases of the building industry, an occupation, in which, directly or indirectly, almost every trade and industry is represented, and by our Counsel and advise solve the many problems which have arisen and will continue to arise between groups and trades; to fix standards and formulate rules of conduct which shall govern our business relations and promote good will, efficiency and fair play in building and construction."

William McClellan, of New York, representing public utilities construction, said: "The extreme difficulties encountered in construction as compared with other industrial problems, makes an organization, such as this, an inevitable factor. When a manufacturer gets an order he puts it through a factory with an organized force and system well established. Construction on the other hand necessitates in the very nature of things that those engaging in it have even to clear the ground, create their plant and organize their forces before they can begin to build. And on the next contract, they must do it all over again. The ability to overcome such problems as these is the kind of ability which must be put into handling the problems before such a council as this. The great need is to translate the general ideals here expressed into specific accomplishments. If construction men can't do it, nobody else can. I wish you God speed and every measure of success."

Ralph F. Proctor, of the Maryland Casualty Company of Baltimore, representing insurance and bonding companies said: "Although the Bible says 'He that is surety for a stranger shall smart for it, and he that hateth suretyship is sure,' we would welcome a beter understanding by our clients of our business and its problems. It is with enthusiasm therefore, that we join in the work of the American Construction Council, and you may be assured of our hearty co-operation in co-ordinating and building the Construction Industry."

The importance of co-ordination was emphasized by Frederick L. Cranford, of New York, Vice President of the Associated General Contractors of America, who said: "For forty years American business has been passing through a transformation from individualistic to collective and co-operative activity, but the co-operation so far developed in construction has been the effort of the members of a unit of the industry, and they have counted the successful though often antagonistic to the interests of the industry, so that while individually we were important, our co-operative efforts have proved ineffective.

"Our experience of the last few years indicate clearly the road which is the co-operation of all the elements of construction, because collectively our interests are and must be unselfish.

"There can be no more difficult industry to co-ordinate and none with a larger number of its members pure individualists, often to the extreme of piracy, but the co-ordination of no other industry is so important to the well being and prosperity of our people, for we are the agents through whom the nations' natural, material, economic and artistic resources are built and developed.

"All of our permanent revenue producing activities are either the product of construction, or through construction we develop their values. The railroads and irrigation in our arid districts serve as an illustration of this."

A very significant stand was taken by labor engaged in building trades when the organized building trades endorsed the American Construction Council and voted unanimously to affiliate with the Council at their recent convention in Cincinnati.

"We believe that the Council can be a most potential factor in the stabilization of the industry we serve," said John Donlin, head of the Building Trades Department, American Federation of Labor, "and we hope that all the elements of the industry will affiliate."

He stated that the Council should be a fact finding agency to determine rights and wrongs, and serve to eliminate wrongs inflicted by a few in each element of the industry. It was his opinion that the Council should establish and maintain local conference committees in all cities, these being necessary for local guidance to hold confidence of the public, to avoid strikes, lockouts and to protect the industry against uneconomic abuses.

"Some one of the many elements contributing to the industry," said Mr. Donlin, "is at one time or another responsible for some injury. If one member is working with detriment to his group, he should be called to task. Responsibility for any bad condition can be determined and a remedy applied. If the banker, the manufacturer, dealer, or workers is responsible, all others are concerned. We must all be guided by a determination for absolute justice."

John R. Alpine, of the Grinnell Company, manufacturers at Providence, R. I., said:

"This is the first time that a meeting of this character was ever held. You have all the important threads that make up the important fabric of the construction industry."

He stated that present efforts will bring a new balancing to industry as a whole, and a greater contentment to both employers and workers.

James A. Emery, Counsel for the National Manufacturers' Association, who followed Mr. Hoover in presiding at the meeting said that this was an opportunity to set up in an unusual way, self-government in the construction industry, a self-government which can speak for itself and act with intelligent vision, and accept for one of its important duties, the cleaning up of the industry from the inside when it is in need of this. "It has," he said, "its own function, its own authority, and as I see it can make itself a self-reformative body without any regulatory power of the government. It can be self-governed or it will be governed by the people by their elected officials."

Thomas R. MacDonald, chief of the Bureau of Public Roads, emphasized the relationship of the highway industry with the whole construction industry.

"The Bureau of Public Roads and officials of the State Highway Departments must study first, last and all the time, the interests of the public.

"The entirely highway program of the United States is under the administrative control of public officers. Therefore these men are not at liberty allways to act as they would if they were occupying a private position, but actuated and governed by the laws which have been established by the public to guide and control their actions.

"The passage of the Federal Aid Highway acts stimulated roadbuilding in the United States so that it has grown into what we may call a major industry. But the very big nature, the very fundamental of the Federal Aid Highway Acts has been the co-operation expected through them between the Federal Government and the States. Since 1916 the States

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

FRANK H. CAVEN,
Director.

(Continued from Page 424)

and the Federal Government have been working out their problems of co-operation and I believe they have their major problems pretty well settled. That leaves that industry organized in such a way that it can co-operate with any major con-

struction council that may be set up to solve the large construction problems in the interest of the public.

"The Highway Commission is willing to co-operate and is organized to fill any opening and to fall into step without practicing marching order very much."

In speaking for the engineers, Mr. Calvert Townley, of the Westinghouse Electric and Manufacturing Company of New York said:

"The engineers believe in organization and in organization for public service. That was the motive which led them to organize their own organization. They do not feel that organization for public service means a sacrifice of private industry. It means the increased reward for private industry because not only does the organization have a feeling of satisfaction, of good well done, but they reap a large pecuniary reward in the important character of their reputation among their associates who come to believe in them, which of course results in time in a very great increase in business.

"A movement to co-ordinate with the object of performing better public service is distinctly a move in the right direction."

Owing to illness, Franklin D. Roosevelt, President of the American Construction Council, was unable to be present at the meeting. The following letter from him was read:

I much regret that I am unable to be present at the organization meeting of the American Construction Council, but I know that under the inspiring leadership of Mr. Hoover the conference will be, not merely an opportunity to get at facts, but will result in a definite move for the good of the nation.

There is absolutely no doubt that the construction industry must do something constructive! I refer not to abuses of power in the past, by this, that or the other individual or local organization; I speak of the fact that an immense sum of money, energy and happiness on the part of the American people can be saved if the existing waste is eliminated.

In my judgment the American Construction Council must be broad enough to include every element, and it must be strong enough to strike at any individual or association of individuals which fails to live up to certain simple standards of ethics in business dealings. It may be felt by some that there would be danger through the limitation of freedom of action of the individual, but it must be remembered that the public as a whole are concerned in the efficiency, honesty and honor of all the groups constituting the construction industry. It goes without saying that if the members of the construction industry are unable to keep their own house in order, an exasperated public will some day regulate their house for them.

Employers and employes, the suppliers of materials of all kinds, architects, engineers, builders, public servants of every governmental sub-division, all are concerned in making this project a success. We cannot hope for Utopia in a week or a year, but it is through the spirit of getting together to further common American ideals that this conference will, I feel certain, take a step which will have wide bearing on the industrial and economic life of tomorrow. We must all, for the moment, lay aside our individual doubts and differences—most of them are temporary, most of them are local in effect. In their place we must set before ourselves national problems—not merely of today, but of tomorrow also.

Franklin D. Roosevelt, formerly Assistant Secretary of the Navy, was formally elected President of the American Construction Council, at the end of a two days' session held in Washington, at which leaders of the Construction Industry gathered to organize a body representative of all construction elements. John B. Larner, Vice President of the American Bankers' Association, and President of the Washington Loan and Trust Company, was elected Treasurer.

The immediate program of action suggested for the new Council include:

The formation of a code of ethics acceptable to the whole industry and to the public;

The gathering of adequate statistics from all sources and resulting interpretation having all the facts;

The reduction of the national shortage of buildnig trades mechanics and the establishment of the necessary apprenticeship system;

Co-operation in establishing uniform building codes throughout the country;

Co-operation with the railroads in expediting the revision of existing freight rates on construction materials. The establishing and strengthening of local organizations throughout the country to bring about the co-operation of all elements in conformity with the principles of the Council;

The mitigation of the evils of seasonal employment and trade mitigation of labor;

The encouragement of local building shows;

Simplification, standardization and elimination of waste;

Education of the public to the distribution of its construction and maintenance requirements more evenly throughout the year;

The promotion of health and safety of workmen;

The reduction of loss of life and waste of construction materials from preventable fires;

The study of old buildings in order to establish superior methods of construction;

The education of the public as to the necessity and economy of properly maintaining existing structures.

Mr. Walter Gordon Merritt, attorney in New York City, in presiding at the meeting of the Council emphasized the need of the co-operative action that the Council will bring about.

"The evils of the construction industry," he said, "are the evils of organizations, not the evils of individuals. Those evils have come about because of the selfish aims of the individual organization. The need is to restrain these selfish aims, and to have each group lay down a code of practice which must pass the judgment and be in accord with the rules and principles of the American Construction Council."

In stressing the necessity to work hand in hand with labor, he said that the organized labor movement is big enough to meet with and discuss its own problems with any of its critics.

"If we all meet and reason together," he continued, "we shall think, feel, and act together. The relation at the present time between employers and employees in the building trades, is one of periodic armistice. This Council must work out a plan of common counsel and joint action.

"One of the most important things which the Council must work out is a method of arbitration. All contracts should be subject to arbitration in accord with the rules of the Council laid down by men of practical standards.

"One of the greatest evils in the industry is the bargaining with corruption for fear that any attempt to uncover that corruption will embarass future relations."

With reference to jurisdictional disputes, he stated that is is not legal to restrict the construction of metal doors, for instance, to metal workers or any particular work to any particular group of workmen. He held that the employer should be free to hire anybody or any job who can do the work for the wage paid, and that the need was for a broader craftsmanship rather than a more highly specialized one.

"This Council," he concluded, "must work out these problems. It must work through common counsel, co-operation and education. Such collective action will not stifle American individualism, but rather such collectivism will further that individualism. We unite to further liberty, not to restrict it."

No More Ashes To Lug

No clumsy pan to spill dust and dirt on the kitchen floor

The Glenwood Ash Chute

solves the problem. It is located just beneath the grate and connected by a sheet iron pipe straight down through the kitchen floor to ash barrel in cellar. No part is in sight. Not a particle of dust can escape. Just slide the damper once each day and drop the ashes directly into the ash barrel.

The Dust-Tight Cover

to barrel is another entirely new Glenwood Idea and is very ingenious. This is only one of the splendid improvements of the new plain

Cabinet Glenwood

the Range without ornamentation or fancy nickel, "The Mission Style" Glenwood. Every essential refined and improved upon. This Range can be had with the latest and most improved Elevated or End Gas Range attachments. It can be furnished with fire box at either right or left of oven as ordered. Our handsome booklet tells all about it.

As The Editor Sees It

THE semi-annual report of building operations in Philadelphia for the first six months of this year, published in full on other pages of this issue of the GUIDE is evidence that Philadelphia is experiencing the greatest building boom in its history. The great increase in building is noticeable in all types of building and in all sections of the city, especially in dwellings. In the first half of 1921 permits were issued for only 1,683 new buildings at an estimated cost of $10,471,290. In the first six months of 1922, permits for new buildings totaled 6,498 at an estimated cost of $44,785,-830. In 1921 additions, alterations, and repairs for first six months totaled 3,693 at cost of $5,705,770; this year 3,868 costing $7,247,765. Total work of all kinds including new buildings, additions, alterations, repairs and miscellaneous for first half of 1922, 11,613 permits for value of $52,429,145, compared to 6,893, costing $16,605,310 for first six months of 1921. The increase in building was not confined to any one month but every month showed a larger number of permits issued this year than in corresponding months of last year. June showed a greater increase than any other month and broke all monthly records with a total valuation of permits granted of $13,190,-220. Never have the first six months of any year exceeded the total for the first half year of 1922, $52,429,145.

The greatest increase in the six months' from January to July in 1922 over the same period in 1921 occurred in dwellings of the two story type. In 1921 536 operations costing $2,772,375 were begun; in 1922 4,744 operations costing $21,256,-015 were started. Three-story houses for same periods increased this year from 71 in 1921, costing $949,050 to 301 costing $3,519,905. Another noticeable increase was in garages, the first six months of 1921 showing 727 costing $1,686,455, and 1922, same period, showing 919 costing $1,837,470.

Manufactories show an increase in 1922 over 1921 from 25 costing $832,940, to 61 costing $2,354,310. Schools increased from one costing $370,000 in 1921 first half year to 9 costing $3,665,-150 in 1922. Tenement houses increased from three costing $219,000 in 1921 to 23 costing $1,252,000 in first half of 1922.

In two story dwellings the forty-second and fortieth wards show the greatest number of buildings started and the greatest increase over the first half year of 1921. The forty-second ward started 1,841 dwellings in 1922, and only 185 in first six months of 1921; the fortieth ward 551 in 1922 and in first half year of 1921 96 dwellings were started.

From the following tables we find that the first six months of 1922 have exceeded the total estimated cost for the entire years of every year excepting 1919 and 1920.

Year	Operations	Estimated Cost.
1909	17,294	$42,881,370
1910	16,383	37,866,565
1911	16,215	40,030,985
1912	14,907	37,173,635
1913	14,813	38,763,850
1914	15,709	35,419,605
1915	17,712	39,444,125
1916	15,613	49,896,570
1917	8,977	34,016,408
1918	5,950	15,452,670
1919	14,509	65,088,750
1920	12,512	55,305,400
1921	14,654	42,790,780

If 1922 maintains the percentage of increase for the next six months, the total cost of buildings in Philadelphia in 1922 will far exceed any year in the history of the City.

The building boom is confined not only to Philadelphia, but exists throughout the entire country, due largely to decreased cost of construction and better working conditions among labor. The great increase, however, in demands for all kinds of buildings has tended to increase material prices and has again made labor somewhat independent, but it is hoped that the principles inaugurated at the American Construction Council will be followed by the entire building industry to the end that both employers and employees may better serve each other and continue the present boom for the good of all concerned.

BLUE PRINTS

AMERICAN CONSTRUCTION COUNCIL

(Continued from Last Week)

Mr. Robert D. Kohn, Architect from New York City, in speaking on the necessity of serving the public and industry through local action stated that the greatest cause of labor problems is the uncertainty of the job of the workman. He described local activities to eliminate such uncertainty in Boston, New York and Seattle, and emphasized that local effort was necessary to bring about the best man to man relationships in the building trades.

M. C. Rorty, of the American Telephone and Telegraph Company of New York, spoke on how construction costs can be determined, recorded, and made useful, and stressed the necessity for accurate statistics and publication for figures on all factors entering into such costs.

In urging the necessity of building a standard of responsibility in the industry, John B. Larner, of the Washington Loan and Trust Company, Washington, D. C., stated that with such standards much litigation could be avoided, and the professions and trades could be governed with greater assurance to the public.

D. A. Garber, New York City, a director of the Associated General Contractors of America, stated that a fair deal in the industry was imperative. He decried a "certain kind of broker who adds nothing of a material nature," but who collects a profit for himself. "The parasite who performs no service," he said, "but who exacts compensation is the one responsible for the sharp practices for which the entire industry is blamed."

D. K. Boyd, of Philadelphia, in speaking on the necessity for the elimination of waste, stated that it could be conservatively estimated that the Council, properly functioning through local groups, may be able to save the American people a billion dollars per year through the elimination of preventable waste.

A. E. Coleman, of Chicago, spoke on the necessity for promoting trade harmony and urged the adoption of a universal contract form to be used by all groups as one means of eliminating great cause for disput and litigation.

John M. Gries, Chairman of the Building and Housing Division, of the Department of Commerce, urged the necessity of dependable sources for statistics. These could not be made to order, he stated, but must be from all accurate sources, and disseminated in such manner to be an accurate guide for business. All the groups will assist in collecting this data.

F. M. Feiker, Vice President of the McGraw-Hill Company, New York City, spoke on the vital need for a Code of Ethics in the industry. He stated that business in general is being conducted on a higher plane, than ever before, and that the contruction industry could not go forward except on that high basis of honesty to itself, and to the public for which it existed. An adequate code of ethics would necessitate the machinery for their enforcement.

This would consist, he said, of a Board of Review. The forces which would make an aggressive policy effective would consist of the industrial press, engineering and professional schools, specialized and trade associations, and the government, especially the Department of Commerce.

The Executive Board of the Council elected at this first annual meeting is as follows:

ARCHITECTS—W. Stanley Parker, New York City; D. K. Boyd, Philadelphia; Abram Garfield, Cleveland; Robert D. Kohn, New York; L. P. Wheat, Washington, D. C.

ENGINEERS—Charles T. Main, Boston; Bion J. Arhold, Chicago; Peter Junkersfeld, New York; Charles F. Loweth, Chicago.

GENERAL CONTRACTORS—W. O. Winston, Minneapolis; F. L. Cranford, Brooklyn; N. H. Hoggson, New York; H. H. Wilson, Munsey, Pa.

SUB-CONTRACTORS—A. E. Coleman, Chicago; J. R. Alpine, New York; Benj. Dickinson, Bedford; Oscar Reum, Chicago.

LABOR—John Donlin, Washington, D. C.; John Coefield, Chicago; John J. Hynes, Chicago; Wm. J. McSorley, Cleveland.

MATERIAL AND EQUIPMENT MANUFACTURERS—Wright D. Goss, New York; F. W. Walker, Beaver Falls, Pa.; W. M. Wood, Decatur, Ill.; William Ritter, Columbus, O.

MATERIAL AND EQUIPMENT DEALERS—W. T .Rossiter, Cleveland; F. L. Jahncke, New Orleans; John E. Doyd, Philadedphia; M. T. Bannigan, Utica.

FINANCIAL BOND, INSURANCE AND REAL ESTATE ORGANIZATIONS—Willis Booth, New York; Harry A. Wheeler, Chicago; Irving B. Hiett, Toledo; James T. Hoveland, Philadelphia; Charles A. Hennery, New York.

PUBLIC UTILITY CONSTRUCTION—Gano Dunn, New York; Francis Blossom, New York; Jos. Alexander, Cleveland; C. H. Markham, Chicago.

FEDERAL, STATE, COUNTY AND MUNICIPAL CONSTRUCTION DEPARTMENTS—Rudolph P. Miller, New York; Chas. Upham, Raleigh; J. M. Gries, Washington, D. C.; W. T. Sargent, New York.

FEDERATED ASSOCIATIONS—Wm. F. Chew, Baltimore; Walter Klie, Cleveland; E. W. Reaugh, Cleveland; G. C. Mills, Webster City, Iowa.

The first meeting of the Executive Board was held in New York, Friday, June 23, at which time Mr. Roosevelt formally took office.

BUILDING CODE

The tentative draft of the Building Code for Pennsylvania has been completed. The fourth section has been compiled and will be submitted to the General Committee for study. This section contains the engineering requirements and comprises rules on (a) Iron and Steel Construction, (b) Concrete Construction, (c) Hollow Block and Terra Cotta Tile, (d) Walls, Piers, Columns and Foundations, (e) Timber (f) Mill Construction, (g) Ordinary Construction, (h) Frame Construction, (i) Stairways, (j) Fire Escapes, Stand Pipes, Automatic Sprinkers, Roof Tanks and Other Tanks, (k) Smoke Flues, Chimneys, Chimney Stacks, Smoke Pipes, Fire Places and Hearths, (l) Heating and Ventilating, (m) Sanitation and Plumbing, (n) Electric Wiring and Apparatus, (o) Gas Generators and Gas Fittings, (p) Plastering, (q) Billboards, signboards, signs, fences, sidewalks, cornices, bay windows, porches, windows and other projections, (r) Safety requirements, (s) Safety Appliances and Methods, (t) Rat and Fly Proofing.

A meeting of the General Committee will be called with a view to formulating a method of procedure to be followed in the apportionment of the various sections to sub-committees for survey, constructive criticism and recommendation in September 1922.

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

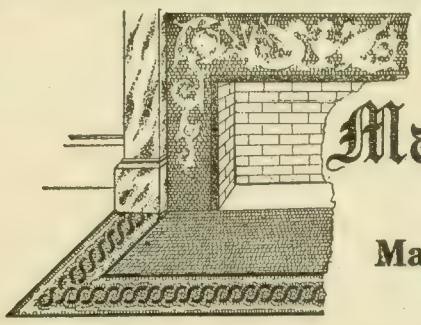
Proposals

INVITATION FOR PROPOSALS



TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 5, 1922. Sealed Proposals will be opened in this office at 3 P. M., July 31, 1922, for the construction (exclusive of mechanical equipment) of an additional wing to the Main Hospital Building of the United States Public Health Service Hospital at Tanner's Creek, Norfolk, Va., in accordance with drawings and specifications, which may be obtained from Neal A. Melick, Superintendent of Constructioin, at the Site of the Hospital, Norfolk, Va., or at this office, in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms, or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid, shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

As The Editor Sees It

Despite the increased building activity in the United States during the last six months, the housing shortage for the country as a whole was recently estimated as somewhat more than two and a half years' production by John Ihlder, manager of the Civic Development Department of the Chamber of Commerce of the United States before the National Conference on Social Work. According to Mr. Ihlder, the situation is not the same in all American cities. In some cities the shortage is estimated as nearly four years, he said, while in others, it is approximately one and a half years, or even less.

"This means," he explained, "that many thousands of American families are still living in cramped quarters, well-to-do families as well as poor. More significant, it means that a considerable proportion of these families are becoming accustomed to this cramped living, accepting it as normal. I have heard of an Admiral of our Navy who, with his wife and two sisters, occupies three rooms in an expensive apartment house and has his meals prepared on an ingenious little electric stove in the hall, of a comparatively well-to-do woman who occupies one room and bath and has her laundry washed in the bath room. When one goes from such people to the poor, he finds the old overcrowding accentuated and insanitary conditions worse than they were before the war."

Mr. Ihlder pointed out "that while we cannot expect house building to continue long at its present speed, we may hope that it will continue to exceed current increase of need and so gradually reduce the shortage. Co-incidentally we may expect that building prices will come down, not steadily—just at present they are rising from the lower level of the winter—but with occasional flats and accents. This means that we may hope for dwellings produced and sold at smaller cost and so put within the means of a constantly larger proportion of the people until the day comes when the old procession is once more started from poorer houses to better houses and so make available to families of small means the old but adequate houses that are still habitable. At present there is an hiatus between the expensive houses under construction and the dwellings of the unskilled wage-earner. At present and for some years in the future, so far as we can forsee, there will be little or no building of new dwellings, at least in the east for unskilled wage-earners.

"Desire for such dwellings is likely to expose us to an insidious danger; the attempt to cheapen construction by diminishing the space put at a family's disposal or by encouraging shoddy construction. The short cut of shoddy construction which has been, and still is to a lesser degree, one of our greatest menaces, promises to offer earlier relief, but at a cost which our children and grandchildren will not pay. The short cut of diminished space has amply proved its fallacy in tenements of New York. Its ultimate results will be higher rents for a population so crowded together that it can not live, but will merely exist.

"From the housing point of view, the most encouraging development of the past two or three years is the extension of zoning regulations in the United States. Begun just before the war, zoning gripped our imagination and as soon as peace returned American cities began to apply it. Today some sixty cities have or are drafting zoning regulations. Because of these zoning regulations they are keeping in their residence districts the open spaces which are the fundamentals of good housing."

EFFECT OF THE AMERICAN PLAN

BY WARREN H. MC BRYDE

President, Industrial Association of San Francisco

Any suggestion that the American Plan in any manner has injured the worker or prejudiced his legitimate interest, is disproved irrefragably by figures and data recently compiled. These figures and data, secured from reliable sources and put to the most rigid test of authentication, show that the building trades mechanic of San Francisco is at least

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

ten per cent. better off today than at any previous time since as far back as 1913. Not that wages are higher now than ever before, but that the margin between wages and the cost of living is less, and that steady work is far more plentiful, than at any time during the past nine years.

During the period from 1913 to an including 1920, throughout all of which time the unions exercised the most complete control over wages and working conditions, the mean margin between the average wage of the building trades mechanic and the average cost of living was approximately twenty-five per cent. Furthermore, during this time, and because of frequent strikes and the resultant lack of confidence of the public, there was far less steady work available for the building trades mechanic than there is at the present time.

It is interesting, also, to observe that these same figures and data show a ten to fifteen per cent. increase (over 1918, 1919 and 1920) in the efficiency and skill of the average building trades craftsman. This gratifying increase is, of course, simply the result of the abrogation of all those rules and regulations, designed to limit output by curtailing efficiency, which prevailed prior to the effectuation of the American Plan.

Thus it becomes conclusively evident that the public, the workers and the employers, all have been benefited materially and lastingly by the establishment in San Francisco of the American Plan.

As a result of laboratory tests made in the College of Industries of Carnegie Institute of Technology, Pittsburgh, it has finally been established that bituminous clay pipe for drainage and sewerage use in every way the equal of the more expensive cast iron pipe which has been employed heretofore.

For years efforts have been made by manufacturers and engineers to find methods of efficient substitution of bituminous clay pipe for cast iron pipe, but without success. One weak point has invariably remained an inability to join the lengths to prevent leakage. Practically speaking there has been but one general type of jointing material used, some variation of the ordinary building cement.

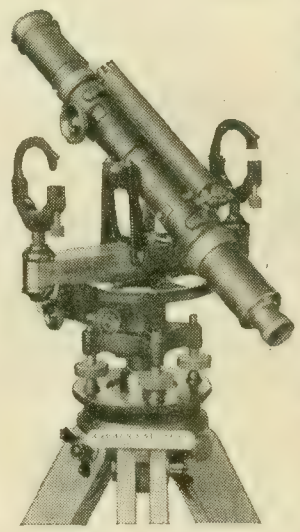
Recently various bituminous compounds have been evolved as a substitute jointing material. But the first—and numerous—tests made of these, too, failed to overcome the great weakness of clay pipe when used for drainage or sewerage.

Finally a number of these bituminous compounds were placed at the disposal of S. E. Dibble, Head of the Heating and Ventilating Department of the College of Industries of Carnegie Institute of Technology. He proceeded to make painstaking and unusual tests and experiments. He not only devised absolutely new equipment with which to simulate actual drainage and sewerage conditions in the making of his tests, but as a result of the tests themselves he developed an entirely new jointing practice and technique. Altogether twenty-one separate tests on a total of sixty-three joints were made, three different bituminous compounds being used.

Not only have Professor Dibble's tests established (1), that a proper bituminous compound can be used efficiently in jointing a pipe; (2), that joints made in the manner developed by Professor Dibble will stand any pressure that the pipe itself is capable of standing, without showing any leak; (3), that a pipe line so jointed can be thrown out of alignment without causing a leakage at the joints; and (4), that leaks due to poor workmanship can be repaired easily and quickly; but Professor Dibble has gone further and has published actual chemical analyses of two of the bituminous compounds found satisfactory.

Industry in a score of its important fields will immediately profit by this practical type of educational institution work.

JUMBLED CITIES



Avoidance and correction of the present topsy-turvy arrangement of so many American cities, the cause of millions of dollars' loss, is the object of "A Zoning Primer" issued by the Division of Building and Housing of the Department of Commerce, according to an official announcement.

The enormous waste in American cities from scrapping good buildings on accounting of the blighting of districts has long been apparent, and for years has levied its tax on the American people.

Random crowding of stores among private dwellings, the elbowing of factories and noisy smelly garages into the rightful domains of neat retail stores or well-kept apartment houses, and the construction of tall, bulky office buildings so closely crowded that the lower floors are too dark for human use and consequently seldom occupied, is part of the present stupid, wasteful jumble which proper zoning will prevent and gradually correct, in the opinion of the Advisory Committee on Zoning of the Department of Commerce.

The pamphlet describes the object of zoning, the need, the health and property protection afforded, and its effect on the cost of living. Legal problems, with an outline of what some cities have accomplished, and a zoning program are also included among other subjects. Copies are sold by the Superintendent of Documents, Government Printing Office, Washington, D. C., at five cents each.

Warren-Knight Co., makers of "Sterling" Surveying Instruments, have effected and are now placing on the market

a new Level that combines qualities of instruments previously used by builders, architects and engineers with a new feature that is particularly meritorious. The new "Sterling" convertible Level shown in the illustration can instanty be changed to a transit (for sighting points above and below the level of the instrument) without the use of detachable parts. It combines the accuracy, strength and durability of previous models with new features so designed that it can be "converted" from a level to a transit in ten seconds and back again as quickly without throwing the instrument out of level. A comprehensive pamphlet illustrating the features and describing the advantages of the new Level will be mailed to any one applying to Warren-Knight Co., Philadelphia.

We'll *write* your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Proposals

INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 5, 1922. Sealed Proposals will be opened in this office at 3 P. M., July 31, 1922, for the construction (exclusive of mechanical equipment) of an additional wing to the Main Hospital Building of the United States Public Health Service Hospital at Tanner's Creek, Norfolk, Va., in accordance with drawings and specifications, which may be obtained from Neal A. Melick, Superintendent of Constructioin, at the Site of the Hospital, Norfolk, Va., or at this office, in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms, or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid, shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 12, 1922. Sealed Proposals will be received at this office until 10 A. M., August 7, 1922, and then opened, for furnishing and installing Storm Enclosure at the U. S. Post Office and Court House at Augusta, Ga., in accordance with the specification and the drawing mentioned therein, copies of which may be had at this office or at the office of the Custodian, Augusta, Ga., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 10, 1922. Sealed Proposals will be opened in this office at 3 P. M., July 31, 1922, for the Mechanical Equipment of the East Wing of the U. S. Veterans' Hospital, Norfolk, Va. (Tanner's Creek Site), in accordance with specification and drawings, copies of which may be had at this office or at the office of the Superintendent of Construction, at the building, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

FINISHING THE FLOORS OF THE SMALLER HOUSE

BY A. ASHMUN KELLY

There are two ways that may be employed in finishing the floors of the average small or medium house. The floor most often painted is the floor of the kitchen, and where the wood is rather soft it is an ideal finish.

Some think paint the best for any kind of wood that may be laid on the kitchen floor. However, most people will want a hard pine flooring, and want this finished au natural, which means either oil rubbed in, or shellac, or liquid filler and varnish, or, not very likely, waxed. Wax will not do because it will not stand water or soap. But for any room where washing is not necessary, such as bedroom and hall, a waxed effect is good.

For a maple floor the first coat is of shellac, as oil will discolor this wood. After the shellac may come the wax. Or clear copal varnish, one or two coats, may follow the shellac, as varnish wears better.

The finishing of a hardwood floor—and by this is meant wood hard and soft—is not a difficult matter, any handy person may do it, but the re-doing of a soiled floor is something different, and then it requires an expert, to know just what is best to do. Wax soon discolors with wear, becomes dirty in spots, and must be removed and the part renewed with wax.

The proper care of a finished floor is also important, for even hard varnish will not stand all the abuse that sometimes is heaped upon a floor.

The varnish used should be that made particularly for a floor. It dries over night fit for walking on in the morning, yet it is sufficiently elastic not to ever crack.

As to the cost, there is no reason why the floor of a low cost house should not be as well finished as that of the mansion; the extra cost in the latter case comes from the scraping and smoothing, mostly, for which more may be paid than than an average good floor will cost, including the laying.

Floors, require a great deal of attention to keep them in proper condition. The public expect floors when done to last for years, without giving them any care, and the painter is blamed for poor wearing qualities. They forget that iron, marble, or wood will wear down. That being the case, what can be expected from a shellac or varnish gum?

Be sure that the floor is scraped perpectly smooth before any finish is applied. And use only the very best of material if the job is to be a good one.

—*Building Age.*

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Don't be a Rip Van Winkle. Advertise and let everybody know you are awake and abreast of the times.

INCREASED SALES and PROFITS

YOUR business and profits can be increased by selling direct to buyers that you know are in the market to buy products or service that you have to sell.

We tell you WHO is in the market and WHERE to secure the business, with our reliable advance information.

DAILY BUILDING NEWS advises you (1) WHEN PLANS ARE IN PROGRESS. (2) NAMES AND ADDRESSES OF DESIGNERS AND OWNERS. (3) WHEN BIDS ARE BEING TAKEN. (4) NAMES AND ADDRESSES OF THOSE FIGURING. (5) THE LAST DAY FOR FILING THE BIDS. (6) NAME AND ADDRESS OF SUCCESSFUL CONTRACTOR, in Philadelphia, Eastern Pennsylvania, Southern New Jersey and Delaware.

Hundreds of firms vouch for the value of DAILY BUILDING NEWS SERVICE and 90% of them renew year after year. 12 years of success back of the Daily Building News.

A single order or contract will repay the investment many times.

The information is so valuable and the investment so very nominal, we want you to know more about it.

SIMPLY CUT OFF AND MAIL THE COUPON. IT WILL NOT OBLIGATE YOU

As The Editor Sees It

"WE are in the midst of the biggest building boom the United States has ever known," says *The Industrial Digest,* New York. "Throughout the country there is bustling in lumber yards and brickyards, chisels are clanking in quarries, steel mills are rolling out structural forms, carpenters are banging away with their hammers, masons are wielding their trowels and painters their brushes; and more structures are being erected than at any previous time in the history of the nation.

"A boom—or a depression—in the consruction industry affects all other lines. Construction is one of the key industries of the nation. It uses the products of about one-fourth of all the persons in the country who are engaged in manufacturing. It consumes about nine-tenths of all the iron, copper, zinc and lead produced. Normally, it is estimated, construction absorbs about half the new capital accumulated in the country every year. It affects all other industries through its influence on rents. The great number of persons who engage in it form an important part of the consuming public.

"Construction has felt with unusually great weight the problems which afflict industry in general. It has experienced its full share of labor difficulties. It has been forced to deal with a scarcity of materials. It has been the subject of government inquiries, and has suffered from much malpractice on the part of those who engage in it. Therefore its sensational recovery at a time when most lines of business, though somewhat improved, are still languishing, is especially interesting.

"The building industry was one of the first to feel the post-war depression. A chart prepared by the Associated General Contractors, comparing the fluctuation of pig iron production with the variation in the number of building permits issued throughout the nation, shows that activity in building started to decline in 1920 eigh months before pig iron production began to sag. In fact, when the iron output started its downward movement the drop in construction was almost over. In November, 1920, the number of permits issued began to rise, and with occasional temporary relapses it has been on the upgrade ever since.

BUILDING BACK TO NORMAL

Comparative Square Foot Costs for Various Building Types

That building is back to normal basis is the declaration of Geo. S. Mills, of Toledo, after a survey just completed.

"They are not back to a basis of 1914 any more than 1914 was comparable to 1904," says Mr. Mills; "but the liquidation of building materials has been so complete that prices, except in a very few instances, are stabilized to a point that building can now go ahead, backed by the assurance that the investment, so far as price conditions are concerned, is safe and found for years to come."

The survey shows that a building in 1914 cost $1.50 per square foot space for ordinary concrete and steel buildings. During 1919 and 1920 costs were from $4 to $5 per square foot. Today the cost is approximately $2 a square foot.

During the last 18 years the cost of construction has shown a constant and steady rise, the chart prepared by Mr. Mills shows. In 1904, the cost per square foot was 78 cents, rising until 1917 when it reached $1.70. It then took a sharp jump, when building reached its peak. The present drop is the first to take place since 1904.

That the only chance for further reduction in building costs is through a drop in freight rates on materials is Mr. Mills' opinion, and he says that would be so small that it would hardly be appreciated.

The reason for the steadily increasing cost in building during the last 18 years is due to builders demanding more conveniences and better houses.—*The Constructor.*

BRICKLAYERS' SCHOOL

Cleveland to Revise Classes Under Joint Auspices

The Cleveland Association of Building Trades Employers has taken steps to re-

DRAWING MATERIALS

CHARLES H. ROBBINS, JR.
1209 Arch Street, Philadelphia
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

vive the bricklayers' apprentice school which has lapsed during the previous year.

The school will be in charge of a joint committee of employers and union men, with assistance by the public schools. Evening sessions will be held with a paid instructor in general charge, but with assistance from practical bricklayers and mason contractors.

Apprentices will be paid a stipulated percentage of the journeymen's scale and will be advanced every half-year in the following steps:

First half year, 32 per cent.; second half-year, 36 per cent.; third half-year, 42 per cent.; fourth half-year, 48 per cent.; fifth half-year, 52 per cent; sixth half-year, 62 per cent.; seventh half-year, 70 per cent.; eighth half-year, 80 per cent.

EMPLOYMENT INCREASE

That there is an increase in employment in many major industries in the country, which has a disinct bearing on construction with reference to men and money, is the opinion of the U. S. Department of Labor. This is based on a survey of conditions for the month of June. All industries, except stone, clay, and glass products, show this increase. The decrease in these three is largely due to the seasonal lay-off in some centers in June. Along with the general increase, a rate of optimism pervading practically all industries is reported.

TO VISUALIZE PREVENTION

Big National Fire Prevention Exposition Will be Great Educational Treat

One of the biggest features of National Fire Prevention Week will be National Fire Prevention Exposition to be held beginning October 2 in New York. This exposition, endorsed by the National Association of Insurance Agents, the National Board of Fire Underwriters and other associations interested in educating the public to the common hazards and their elimination and in fire-retarding and fire-fighting devices and fire resistive materials, has also been endorsed by Mr. W. W. Orr, assistant secretary of the National Association of Credit Men and who is in charge of the fire prevention work of that big organiation.

Immediately following the meeting of the conferees on fire prevention in Washington, July 12, there was held a meeting of representatives of various organizations at which meeting Mr. E. A. MacKinnon, vice-president of the General Expositions Company, which will put on the exposition, explained its purpose and scope.

The great possibilities of the exposition, both as an educational feature and as a means of obtaining national fire prevention publicity, were seen by the men attending this meeting and their endorsemen was unanimous.

There will be displays of modern fire apparatus, or fire extinguishers of all kinds of safety devices, fire-safe building materials anl other appliances of interest to factory superintendents, manager and executives; business men; fire department officials; municipal authorities, and the public generally.

Plans are also being laid to have outdoor demonstrations, fire drills by children, tests of fire apparatus, contests between modern and old fire engines and other spectacular features.

It is conceded by those who have discussed the exposition that it should be productive of great good, especially if different days be set aside for special events, such as Children's Day, Governors' Day, Industrial Day, etc.

At the exposition will also be started a movement to form a National Junior Fire Brigade of boys who will aid in every way they can in suppressing and preventing fires.

ONE GENERAL CONTRACT BEST

Places Central Responsibility and is More Economical

The advantages of letting one contract for all parts of a building to a single general contractor, thus censoring responsibility, were explained by G. W. Buchholz to the chairman of the building committee in charge of a memorial school, who advised that they reserve the rights to sub-let any portion of the work. His letter follows:

"The awarding of separate contracts for the several portions of the work to different contractors is not often practiced, and where tried has usually proven unsatisfactory and uneconomical. The reason advanced for the application of this policy is that it is more economical. Experience has shown that that is not the case. While the sum total of the separate contractors often amount to less than the lump sum bid of a general contractor, the final and ultimate cost of the structure is greater owing to the great number of extras necessary to correlate the work of the several separate contractors. The project very often suffers on account of the lack of harmony, if not open hosility, between the subcontractors.

"General contractors of responsibility and reputation are disinclined to compete where the proper co-ordination of the project is outside their control. Owners, therefore, lose the benefit of high class competition."

We'll *write* your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Brick, stone, 1 story, 55x140 feet, slag roof, wood floors, hollow tile, electric light, tile and marble work. Plans in progress.

Apartment, Atlantic City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Philadelphia. Owner, Ernest Byer, care of architect. Brick, steel, 4 stories, 40x100 feet, slag roof, hardwood floors, vapor heat, electric light, metal lath, tile and marble work, architectural terra cotta. Plans in progress.

Hotel Davis (add.), St. Charles avenue and Beach, Atlantic City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owner, Mrs. Davis, on premises. Brick, steel, 7 stories, 40x80 feet, slag roof, hardwood floors, vapor heat, electric light, tile and marble work, hollow tile, elevators, roof ventilators, metal lath, skylights. Plans in progress.

Bungalow, Atlantic City, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City, N. J. Owner, George Bach, Trenton avenue, Atlantic City, N. J. Hollow tile, stucco, 1½ stories, 19x45 feet, asphalt shingle roof, hardwood floors, hot water heat. Owner taking sub-bids.

Apartment, Atlantic City, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City, N. J. Owner, J. F. Eilenberg, 122 South Maryland avenue, Atlantic City, N. J. Brick, steel, 5 stories, 39x103 feet, slag roof, hardwood floors, 2 elevators, steam heat, electric light, metal lath, tile and marble work, skylights. Owner taking sub-bids.

Residence (alts. and add.), Mississippi, below Oriental avenue, Atlantic City, N. J. Architect, W. S. Hewitt, Guarantee Trust Building, Atlantic City, N. J. Owner, A. C. McClellan, Phillips House, Atlantic City, N. J. Brick, frame, stucco, 5 stories, 36x80 feet, slag roof, pine floors, electric light, metal lath, elevators. Owner ready for bids.

Stores (alts. and add.), 1008 Atlantic avenue, Atlantic City, N. J. Architect, Oscar Schmidt, Guarantee Trust Building, Atlantic City, N. J. Owners, Standard Music Co., on premises. Brick, 2 stories, 20x30 feet, slag roof, hardwood floors, hollow tile, electric light, metal lath, tile work, plastering, copper work. Architect ready for bids, due August 7th.

Moving Picture Theatre, Haddonfield, N. J. Architects, Lackey & Hettle, 509 Federal street, Camden, N. J. Owner, Senator Jos. F. Walworth, Haddonfield, N. J. Brick, limestone, cut stone and blue stone, 2 stories, 41x159 feet, Barrett roof, cement and pine floors, roof ventilators, iron work, floor hardener, band, marble and terrazzo work, metal lath, electric lighting. Architects taking bids, due July 28th.

Residence, Merchantville, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owner, Herbert W. Staats, Merchantville, N. J. Brick and stucco, 1½ stories, 28x52 feet, slate roof, pine floors, hot water heat, electric light, tile and marble work, bond, iron work. Architect taking bids, due July 29th.

School, 904 Pacific avenue, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owners, Beth Israel Synagogue, Dr. Fisher, Atlantic City, N. J. Brick, 2 stories, 40x50 feet, slag roof, pine floors, electric light, roof ventilators. Architect taking bids, due July 27th.

School, Pleasantville, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City, N. J. Owners, School Board of Pleasantville, Arthur Stiles secretary. Brick, 3 stories, 84x122 feet, slag roof, hardwood floors, steam heat, electric light, roof ventilators, waterproofing. Owners taking revised bids, due August 8th.

Hotel, Ocean City, N. J., $850,000. Architects, Dreher, Churchman — Paul, Otis Building, Philadelphia. Owners, Chamber of Commerce, care of J. H. Slocum, care of Hotel Normandie, Ocean City, N. J. Brick, steel, concrete, 7 stories. Sketches submitted.

Hotel (add.), Atlantic City, N. J., $3,000,000. Architects, Carrere & Hastings, 52 Vanderbilt avenue, New York. Owners Hotel Chelsea, Morris avenue and Beach, Atlantic City, N. J. Brick, concrete, fireproof, 150x125 feet, steam heat, electric light, metal lath, tile and marble work, elevators. Plans in progress.

Road Work, Woodbury, N. J. Engineer, Wm. C. Cattell, County Engineer, Woodbury, N. J. Owners, Board of Chosen Freeholders, Woodbury, N. J. Reinforced concrete, 1,937 square yards, bond. Owners taking bids, due August 10th at 10 A. M. Deposit of $10.00.

Power House, Blackwood, N. J. Architect, private plans. Owners, Board of Chosen Freeholders, Camden County, Samuel Wood, chairman, Court House, Camden, N. J. Brick, concrete, steam heat, bond. Owners taking bids, due August 7th at 11 A. M.

Office (alts. and add.), southeast corner of Federal & Hudson streets, Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, Frost Bros., 540 Federal street, Camden, N. J. Brick, 3 stories, irregular size, slag roof, hardwood floors (heating reserved), electric light. Architects taking bids, due July 29th.

Residence, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owner, N. Schwartz, care of architect. Brick, 1½ stories, 45x45 feet, Spanish tile roof, hardwood floors, hot water heat, electric light, tile and marble work. Architect taking bids, due July 31st.

Bank, Tuckerton, N. J. Architect, J. V. Mathis, Guarantee Trust Building, Atyantic City, N. J. Owners, Tuckerton Bank, care of F. R. Austin, Tuckerton, N. J. Brick, 1 story, 30x34 feet, 18x42 feet, slag roof, hardwood floors, hot water heat, electric light, tile and marble work, metal window guards, bank fixtures. Architect taking bids, due August 3rd.

Warehouse, Newark, N. J. Architects, De Armond, Ashmead & Bickley, Franklin Trust Building, Philadelphia. Owners, Elliott Leather Works, 356 Admas street, Newark, N. J. Brick, 2 stories, 50x90 feet, Barrett roof, cement and pine floors, millwork. Plans in progress. Architects will take sub-bids on above mentioned material. Owners will sublet other work.

New Jersey Contracts Awarded

Factory Building, Sixth and and Jefferson streets, Camden, N. J. Architect, private plans. Owner, Charles W. Breneman, 1306 Sansom street, Philadelphia. Concrete and steel, 4 stories, 40x200 feet, slag roof, concrete and cement floors, steam heating, electric lighting, rolled steel sash. Contract awarded to Frank Hill Smith, Dayton, Ohio.

Store Building, Broadway and Spruce sts., Camden, N. J. Architect, Sol Kaplan, 929 Chestnut street, Philadelphia. Owners, Harry Pinsky Sons Co., on premises. Brick, steel and reinforced concrete, 5 stories and basement, 56x92 feet, slag roof, cement, oak and maple floors, hollow tile, metal lath, terrazzo, rolled steel sash, hollow metal skylights, fireproof, hollow metal and rolling steel doors, ornamental terra cotta, iron work (elevators reserved), heating, lighting and plumbing separate bids. Contract awarded to Potts Bros. & Cooperson, 129 North Eleventh street, Philadelphia.

Residence and Garage (alt. and add.), 6119 Monmouth avenue, Atlantic City, N. J. Architect, Oscar Schmidt, Guarantee Trust Building, Atlantic City, N. J. Owner, M. H. Goodin, Adelphia Hotel, Philadelphia. Hollow tile, stucco, 2 stories, 38x53 feet, Spanish tile roof, hardwood and concrete floors, hot water heat, electric light. Contract awarded to A. B. Bowen, Ventnor, N. J.

Residence, Miami, Florida. Architect, J. V. Mathis, Guarantee Trust Building, Atlantic City, N. J. Owner, Joseph Frailenger, Shankville, Pa. Hollow tile, stucco, 2 stories, 30x42 feet, 30x8 feet, Spanish tile roof, pine floors, electric light, tile work. Contract awarded to Thomas Ryan, Atlantic City, N. J.

School (add.), Idlewood, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City, N. J. Owners, Board of Education, Egg Harbor Township, H. B. Lee, Mays Landing. Brick, 2 stories, 40x70 feet, pine floors, electric lighting. Contract awarded to P. G. Hannum, Georgie avenue, Atlantic City, N. J.

Church, Ventnor, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owners, Ventnor Community Church, Ventnor, N. J. Stone, 1 story, 65x85 feet, slag roof, iron work, terra cotta. Contract awarded to D. A. McClelland Co., Drexel Building, Philadelphia.

Store (alts. and add.), Atlantic City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owner, H. Jones, care of architect. Terra cotta, brick, 4 stories, 30x150 feet, slag roof, hardwood floors, vapor heat ,electric light, tile and marble work, hollow tile. Contract awarded to Charles D. Thompson, Atlantic City, N. J.

Miscellaneous Construction News

Bungalow, Buffalo, N. Y. Architect, C. E. Schermerhorn, 430 Walnut street, Philadelphia. Owner, Conrad Hammer, Buffalo, N. Y. Frame, 1½ stories, 30x26 feet, shingle roof, pine floors, electric light. Owner will build.

Residence, Winston-Salem, N. C. Architect, Charles Barton Keen, Bailey Building, Philadelphia. Owner, C. A. Kent, Winston-Salem, N. C. Brick and hollow tile, 2½ stories, 42x50 feet, slate or tile roof, oak floors, vapor heat, electric lighting. Architect taking bids due August 2nd.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

Proposals

SEALED PROPPOSALS

Notice is hereby given that separate sealed proposals will be received by Samuel Wood, Chairman of the Joint Committee of the Board of Chosen Freeholders of the County of Camden, consisting of the Hospital for the Insane and County Farm Committees, opened and read in public on Monday, August 7th, 1922, at eleven o'clock A. M., daylight saving time, at a public hearing of said Joint Committee to be held in the Freeholders' room in the Court House, Camden, New Jersey, for the following:

1. The furnishing and installing of a steel pressure filter in the power house on the above lands at Blackwood, N. J., in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words, "Bid on Filter."

2. The furnishing and installing of two 180-H. P. boilers, together with foundations, etc., in the power house on the lands aforesaid, in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words, "Bid on Boilers."

3. The building and construction of a power house and retaining walls for cold storage upon the lands aforesaid, in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words, "Bid on Power House."

4. The furnishing and installing of piping in connection with the proposed new power house on the lands aforesaid, in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words "Bid on Piping."

All bids must be enclosed in sealed envelopes, bearing the name and address of the bidder, as well as the words above specified, and addressed to Mr. Samuel Wood, Chairman, Court House, Camden, New Jersey.

Each bid must be accompanied by a certified check in a sum not less than five per cent. of the bid submitted.

A surety company bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also enclose in his bid a bid-certificate from a surety company.

The Board of Chosen Freeholders reserves the right to reject any and all bids.

Dated July 20, 1922.

By order of the Board of Chosen Freeholders of Camden County.

JOHN PRENTICE, Director.
FRED W. GEORGE, Clerk.

TREASURY DEPPARTMENT, Office of the Supervising Architect, Washington, D. C., July 19, 1922. Sealed Proposals will be opened in this office at 3 P. M., August 2, 1922, for furnishing and installing fly screens for cottages Nos. 1, 4, and 5, and Mess Hall and Administration Building of the United States Public Health Service Hospital No. 42 at Perryville, Md. Specifications may be obtained at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

SEALED PROPOSALS

Notice is hereby given that separate sealed proposals will be received by Samuel Wood, Chairman of the Joint Committee of the Board of Chosen Freeholders of the County of Camden, consisting of the Hospital for the Insane and County Farms Committees, opened and read in public on Monday, August 7th, 1922, at eleven o'clock A. M., day-light saving time, at a public hearing of said Joint Committee to be held in the Freeholders' room in the Court House, Camden, New Jersey, for the following:

1. The furnishing and installing of a steel pressure filter in the power house on the above lands at Blackwood, N. J., in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words "Bid on Filter."

2. The furnishing and installing of two 180 H. P. boilers, together with foundations, etc., in the power house on the lands aforesaid, in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words "Bid on Boilers."

3. The building and construction of a power house and retaining walls for cold storage upon the lands aforesaid, in accordance with the said plans and specifications. The envelopes enclosing bids for this work must bear the words "Bid on Power House."

HOW ELIMINATE WASTE?

Practical Suggestions for Large Savings*

BY D. KNICKERBACKER BOYD

Standardist, Philadelphia

The actual subject of this brief talk has been touched upon by every speaker, starting with Secretary Hoover yesterday morning.

I could therefore finish with the statement that the elimination of waste in the construction industry is necessary in order that the materials and man power of this country, or of any country, may be conserved and that the health, safety and comfort of the occupants of the buildings may be provided for with the least lost motion and the least expenditure of money.

I will go somewhat into detail concerning features of waste in the construction industry which, as I see them, can and should be eliminated.

It can be conservatively estimated that the A. C. C., properly functioning through local groups, may be able to save the American people one billion dollars through the elimination of these and other preventable wastes.

Start Buildings Above Grade

Let us think of the enormous waste going on everywhere incidental to digging down for cellars and digging, refilling, and redigging and resurfacing of streets, roads and sidewalks for water and drainage pipes, conduits, sewers, and public utilities.

The necessity and opportunity for elimination of waste in this direction is great. I offer for consideration the suggestion, which is not new, that all newly developed, areas, and all changes wherever possible in existing cities, shall have buildings started from grade, without excavations except for cuts to use as fills.

Indeed, with modern methods of heating, why should not the average house be built without a cellar, and storage for coal, provisions, etc., be afforded on the ground floor, eliminating waste of effort in going up and down cellar stairs continually.

Why should not streets in cities be built above the ground instead of cutting out the ground under them for every conceivable purpose and over and over again without regard for incidental losses and waste?

Having disposed of the ground (at enormous expense) we now come to construction of buildings. In this whole field, we of the construction industry are too apt to concentrate our thoughts on new work.

This is not right. We must differentiate between repairs and maintenance of existing structures, alterations and additions, demolition and reconstruction, and set it off against new work.

Fire and Loss of Life

Taking up existing structures first—two enormous wastes stand out.

These are preventable losses of property by fire, to say nothing of the more important loss of human life and man power, and preventable losses due to decay and deterioration.

We, through our new American Construction Council have an unprecedented opportunity to show our enlightened unselfish interest in the public welfare by taking every measure possible to stop a waste of $400,000,000 annually and of thousands of lives and untold millions of man-hours due to fire alone.

The surest means I know of is to make everyone careful, and I suggest that we urge the adoption everywhere of personal liability laws to hold individuals respon-

*Address before the Organization Meeting of the American Construction Council, Washington, D. C., June 20, 1922.

sible for the cost of extinguishing fires due to their neglect or carelessness.

Let us also see to it that all possible fire precaution and protective measures are adopted in new construction work.

The other great waste which I have mentioned in connection with existing structures is the decay and deterioration which, through lack of knowledge and foresight and through downright carelessness, is allowed to go on everywhere when simple preventive measures involving construction materials and labor promptly and properly applied, would save countless millions of waste.

Here we have an opportunity to display our enlightened selfishness by selling the paint-up and fix-up idea to the public in its own interest as well as in the interest of the construction industry.

Saving Through Standardization

A vast amount of waste due to unnecessary individual effort could be eliminated if architects and engineers would, in cooperation with all the industries, standardize the parts of certain buildings and standardize the detail drawings necessary to accomplish satisfactory results.

The participation of producers and manufacturers is vital in this program. Already the Department of Commerce has made a fine start in simplified practice elimination of unnecessary types, sizes, patterns and finishes of many parts and articles related to construction. Its Building Code Committee is also doing notable work in offering to the country a document which will assist in the economical and safe use of materials and produce further economies in the uniformity of dimensional requirements. The field of standardization is too large to more than touch upon here and of all the many possibilities I will mention only one.

Let us assume that, instead of each architect laboriously making detail drawings for window frames for all normal requirements, a universal box frame and sash were developed and adopted as standard and that this box was carefully and economically worked out to prevent air leakage. What would be the result? Cold would be kept out and heat kept in. Suppose the resultant saving in fuel, aside from the added comfort, was but one-half ton of coal to each home. What would be the elimination of waste in this one item alone?

I leave it to you to figure out, but it would not only amount to millions of tons and dollars, but reflect itself in relief to transportation and all down the line of construction activities.

"Estimates Cheerfully Furnished"

The builder or general contractor next appears upon the scene and, by the use of three simple words in an innocent looking combination, he has had a very large part in causing waste. I refer to the slogan, "Estimates Cheerfully Furnished," which has so greatly contributed to the prevalent wasteful method of estimating on the drawings of architects and engineers. Specifications, too, must be standardized to intelligently say what they mean.

Some means should be devised to eliminate the enormous amount of time expended by builders and sub-contractors estimating on every building operation, many of which, as you know, do not proceed. That is an absolute loss. In my opinion builders should be paid a fee for estimating. That would be a benefit in several ways, one of which would be that owners would not require so many builders to estimate, and the builders would not require so many subcontractors to estimate. Overhead would thus be cut down all along the line. The more experienced and capable builders would be given the preference. At the present time when each builder or subcontractor estimates, each one separately takes off the quantity. Another way to eliminate waste would be to have one quantity statement or survey, so all the contractors estimating would be figured on the same quantity, and would merely appraise their units and their incidental expenses and attach their proper profits.

Complete Co-operation Necessary

We come next to the actual construction after having awarded a contract for a building, and there we find the greatest opportunity to eliminate waste. The only satisfactory method of proceeding in that direction is to have that complete co-operation between architects, builders, material men, all the subcontractors and all the workers on the job, which will come about through local effort co-ordinated with this A. C. C.

I want to read a very brief extract from an article in a recent issue of "Forbes" entitled, "Industry can double productivity."

"Industrial efficiency in this country is no greater than 40 per cent., and probably as low as 15 per cent. of what it should be. A conservative estimate places it at 25 per cent. of fair and attainable standards. This means an industrial waste of 75 per cent. If we could eliminate preventable wastes, productivity would increase 300 per cent."

We have been making studies in Philadelphia of this whole question of the elimination of waste, but so far the task has been conducted by the workers themselves, strange as it may seem, and those workers are seeking the co-operation of the architect, engineers and builders, which is very gradually being secured.

Sandford E. Thompson has said, "certain wastes stand out clearly in the building trades:

"1. Loss of working time throughout the year.

"2. Poor planning of construction work and of the individual jobs by the builder.

"3. Lack of knowledge of a day's work.

"We find that we must dovetail all these things together, so that every man shall have the opportunity to work; we must develop the technique of each industry, so that every man can make the best use of his powers; we must train the employer to plan his work and also to appreciate the human side of life.

"You may ask why studies of detail, why the determination of standards will aid in the elimination of waste. It is because it will increase the initiative of the worker, it is because it will differentiate the good man from the poor man it is because it will present an aim to work to, because—and this is perhaps the most important feature of all—it will show us the easiest and most economical way of doing the work and will compel employers to take more thought to the methods of handling the work and to planning out the work that is to be done. Thus costs can be and will be reduced."

A Congress or Conference Board

I want to add a brief sketch of what seems to me are the most pertinent and important problems to be solved in co-ordination of all facts connected with building. These can be studied by each local group.

Such a group would act as a central bureau through which, voluntarily, all construction programs could be cleared, including national, State, municipal and private work in each territory. Suggestions could be made for co-ordination of activities, allocation of materials and reduction of estimating costs; local production could be encouraged, rail hauls shortened, traffic congestion lessened; a constant labor survey could be maintained and employment bureaus established to the advantage of the employer as well as of the employee; good management could be promoted, efficiency encouraged, apprentices educated and properly trained; and increased production would result all around.

Educate Public to Responsibility

In such a program another vital necessity is to educate the public to an understanding of the fundamental principles of a sensible distribution of demand for services throughout the year. Instead of carrying on our main construction work in seven or eight months that which would seven or eight months that which could be deferred and done through the remaining four or five months should be so sceduled. Owners making interior alterations or additions to buildings should be encouraged to have this work done in the "off-peak" season. Old buildings should be demolished in the cold weather to make way for the new construction, and not (as is often the case) at the time when the new building itself might be under way.

CONSTRUCTION COUNCIL

Executive Committee Appointed at Board Meeting in New York

The year's program for the American Construction Council adopted by the Executive Board of the Council at the home of Franklin D. Roosevelt, President, in New York City, June 23, 1922, will be chiefly along the following lines:

First—To strike at what perhaps is the fundamental ill in the industry—the lack of steady employment on the part of 3,000,000 workers.

Second—To promote vocational guidance through the educational systems of the country, in order to raise the efficiency and workmanship and to co-operate with labor in effecting a reduction in the national shortage of skilled building mechanics and encouragement of proper apprenticeship systems.

Third—To appoint a committee immediately to fomulate a code of ethics governing all branches of the industry to promote greater public confidence and to eliminate various abuses from which both the public and the industry have suffered.

At this meeting of the Board, at which Mr. Roosevelt occupied the chair, it was decided to tackle the problem of seasonal unemployment without delay. The concensus of opinion was that the days of employment were fewer than those constituting a theatrical season, and the annual earnings of building workers small, although the daily wage in certain trades had become almost prohibitive. If the obstacles to steady employment could be entirely overcome, the cost of construction would be reduced.

The headquarters of the Council will be in Washington, D. C., where governmental statistics will be within easy access. Meetings of the Board will be open to the public. The active management will be in an Executive Committee, composed of one representative from each of the eleven groups into which the Council is divided. For the first year, this Committee will be made up as follows:

Architects—D. Knickerbacker Boyd, Philadelphia.

Engineers—Charles F. Loweth, Chicago.

General Contractors—Noble Foster Hoggson, New York.

Sub-Contractors—Oscar H. Reum, Chicago.

Construction Labor—John Donlin, Washington.

Material and Equipment Manufacturers—M. T. Bannigan, Utica.

Bankers, Bond, Insurance—Willis H. Booth, New York.

Railroads and Public Utilities—Francis Blossom, New York.

Federal, State, County, and Municipal Officials—John M. Gries, Washington.

Builders' Exchanges and Building Trades Employers' Association—Walter Klie, Cleveland.

ARBITRATION FAVORED

A. G. C. Interpretation Explained Before Railway Engineering Association

At a special meeting with representatives of the American Railway Engineering Association in New York, June 7, General Marshall and J. W. Cowper explaind the arbitration clause an interpreted by the Associated General Contractors in the Universal Contract Form proposed by the Joint Conference on Universal Contractors. The basic principles of arbitration as held by the A. G. C. are as follows:

1. Since the engineer or architect is the person who conceives a structure, and is responsible for its safety, integrity, and appearance, he should in collaboration with the owner, be given authority to see that the work is carried out as conceived, even to the extent of making changes in the work which appear desirable in its progress. The engineer or architect should have final decision as to the result to be obtained. From the standpoint of building safe and satisfactory projects and of expediting the work, it is essential that some individual have final determination in the elements of safety, integrity, and appearance. This person must obviously be the architect or engineer. Considerations of cost, how-

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519
BLUE PRINTS

ever incurred, by any change of plans or ambiguity, is a matter that would be settled by agreement or arbitration.

2. It is not feasible to arbitrate all subjects affecting costs, but it is possible to separate on a different cleavage and arbitrate the cost element of any subject, reserving other elements, namely, the results to be obtained, as a matter on which the architect and engineer has the final say.

3. In the case of ambiguity in the general provisions of the contract, neither party should have final say, and the matter should be settled by arbitration.

These principles constitute one idea of limited arbitration, which exempts interpretation of plans and specifications from those arbitrable subjects.

At a meeting of lumber manufacturers, lumber wholesalers and lumber retailers held at the Department of Commerce in the latter part of May, it was stated that as between these three bodies arbitration will be the rule. The Chamber of Commerce of the United States has endorsed commercial arbitration also, and altogether the idea is gaining favor.

A NATIONALIZED BUILDING CODE

Contractors, Building Departments, Public, All Served

BY H. E. PLUMMER

Inspector of Buildings, Portland, Oregon

The average building code of the American city, although the result of much time and work and earnest thought on the part of well constituted committees, is still a more or less imperfect document. The dissatisfaction expressed with the code varies somewhat with the different communities, but a careful investigation will show that there is some dissatisfaction with the code in every city. In the average city, the viewpoint of most people is that the code is like a man who has been sick for a long time, but is hanging on and manages to go to business. Every once in a while his condition seems worse and he is put under the care of doctors and nurses for a going-over and patching up. After such treatment, his condition appears better for a short time, but shortly it is seen that such improvement was more apparent than real. When the case of the patient is diagnosed, it is found to be about as follows:

General condition—poor and run down.
Constitution—good; otherwise the patient would not be alive after so much knocking around and abuse.
Nerve—wonderful, as patient is always making trouble by butting in where not wanted.
Joints—stiff and squeaky.
Eyes—very bad, can see but a few feet ahead.
Heart action—irregular and misses beats frequently.
Patient can no longer run for a car or from an enemy.
Lungs—poor, as patient can hardly talk above a whisper.
Brain—in sad condition; does not function, except the bump of obstinacy and love of life.
Take it all in all, the patient is pretty much of a wreck.

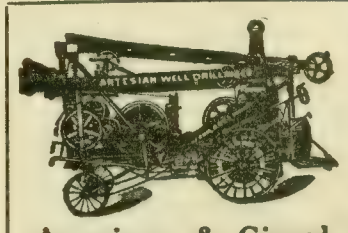
At the present time, however, we have called in some new physicians who are prescribing a new treatment for the case. It seems that the patient has been leading too solitary a life and should enlarge his horizon and associate more with his fellow men. He has played a lone hand too long, and now must be patched up, given a brand new suit of clothes and become a member of the Nationalized Codes Association, which has promised to provide new brain, heart and lung power, oil for joints, etc., so that the patient will be a new man with spring in his toes, ready and able for a day's work and to cure the ills to which humanity is subject.

The patient has been accused of many crimes, as well as diseases and defects other than those given above; and, while he has some strong supports, yet he has some bitter enemies. He is naturally very much of a conservative in policies and politics. Take him all in all, he is not a bad fellow and, if his friends take over the work of improvement rather than his enemies, he may again lift up his head and become more of a progressive and occupy his real place in society.

It is very easy to find out what the deficiencies in the building codes are, as there are many people that are eager to point out the same. When these same individuals are questioned as to what changes should be made to provide a practical and up-to-date working code, their volubility decreases rapidly and insistence upon an answer commonly causes them to fade away and they lose themselves in the background of the landscape.

Building Code Essential

It might be well to consider for a moment some of the fundamental essentials of a building code:



The first fundamental of the building code is that it should provide for the safety of the people that occupy buildings and those in the neighborhood.

The second fundamental is that it should provide for a certain amount of well being of the people in the building and in adjoining buildings, which well-being can be preserved by providing light, air, easy access and exit from the building.

The safety requirements of the code cover both proper strength of construction and protection against fire. In the

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Orphanage, Cheney, Pa. Architects, Morris & Erskine, 1716 Cherry street, Philadelphia. Owners, Home for Destitute Colored Children, care of architects. Stone, 2½ stories, 50x100 feet, slate roof, electric lighting. Architects taking bids due August 5th.

School (add.), Cheltenham, Pa. Architect, Herbert C. Wise, 1416 Chestnut street, Philadelphia. Owners, School District of Cheltenham Township, E. B. Scarborough, secretary, Elkins Park, Pa. Brick, fireproof, 1 story and basement, 35x75 feet, slag roof, bond (heating, ventilating separate bids), electric light. Deposit of $25.00 required. Refunded. Owners taking bids due August 4th at noon.

Residence, Bethlehem, Pa. Architect, E. R. Bitting, Odd Fellows' Building, Bethlehem, Pa. Owner, Benjamin Hutfilter, Kurtz Restaurant, 40 West Broad street, Bethlehem, Pa. Brick, 2½ stories, 26x24 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Owner taking bids due as soon as possible.

Theatre, 718 North Seventh street, Allentown, Pa. Architects, Ruhe & Lange, 10 North Sixth street, Allentown, Pa. Owners, People's Theatre Co., Inc., 1767 Broadway, New York. Brick, steel, fireproof, 1 story, 60x120 feet, slag roof, hardwood floors, electric light, tile and marble work, roof ventilators, skylights. Architect taking bids due as soon as possible.

Theatre, New street, Bethlehem, Pa. Architects, Ruhe & Lange, 10 North Sixth street, Allentown, Pa. Owners, People's Theatre Co., 1767 Broadway, New York. Brick, steel, fireproof, 1 story, 40x200 feet, slag roof, hardwood floors, electric light, tile and marble work. Architects taking bids due as soon as possible.

School, North White Hall Township, Lehigh County, Pa. Architects, Jacoby & Everett, Commonwealth Building, Allentown. Owners, North White Hall Township School Board, Paul Meckley, secretary. Brick, 2 stories, 12 rooms, slag roof, hardwood floors, hot water heat, electric light, metal lath, tile work, safety treads, roof ventilators, waterproofing and dampproofing. Architects ready for bids due August 16th.

Bungalow, Jenkintown, Pa. Architect, Conrad F. Neff, Twelfth and Locust streets, Philadelphia. Owner, Joseph Beatty, Lawndale, Philadelphia. Hollow tile and stucco, 1½ stories, 34x46 feet, asbestos shingle roof, oak floors, hot water heat, electric light, tile work. Architect taking bids due August 7th.

Bank, Stores and Office Building, Tyrone, Pa. Architect, George S. Idell, 1705 Chestnut street, Philadelphia. Owners, Farmers' & Merchants' Bank, Tyrone, Pa. Stone, brick, steel, 5 stories, 100x60 feet, slag roof, hardwood, pine and cement floors, hollow tile, roof ventilators, metal window guards, bronze work, tile and marble work (plumbing, heating, lighting, elevators and vaults separate bids). Architect taking bids due at Tyrone Bank, August 4th, at 9 A. M.

Bungalow and Garage, Broomall, Pa. Architect, Clarence Brazer, Crozer Building, Chester, Pa. Owner, Dr. J. G. Thomas, Newtown Square, Pa. Hollow tile and stucco, 1½ stories, 28x33 feet, garage, 1 story, 18x20 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Owner taking sub-bids.

Factory, Hazleton, Pa. Architects, Tilghman H. Moyer Co., 824 Hamilton street, Allentown. Owner, J. H. Janowitch, 54 White street, New York. Steel and frame, brick, 3 stories, 65x125 feet, slag roof, electric light, roof ventilators, rolled steel sash, fire doors. Plans in progress. Architects will build.

Residences (9), East Lansdowne, Pa. Architect, Jesse L. Stetler, 1484 North Fifty-second street, Philadelphia. Owners, Mench & Manley, Fifty-ninth and Cedar avenue, Philadelphia. Stone, frame and stucco, 2½ stories, 17x33 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Owner taking sub-bids.

Residence and Garage, Merion, Pa. Architects, De Armond, Ashmead & Bickley, Franklin Trust Building. Owner, Frank H. Maurer, Wayne and Bristol streets, Philadelphia. Stone, 2½ stories, 46x32 feet, garage, 26x22 feet, slate roof, hardwood floors, steam heat, electric light, tile and marble work. Architects taking sub-bids.

Residence and Garage, Overbrook, Montgomery County, Pa., $90,000. Architects, De Armond, Ashmead & Bickley, Franklin Trust Building. Owner, William T. Galey, Jr., 6446 Sherwood road, Philadelphia. Hollow tile, stone and stucco, 2½ stories, 125x60 feet, garage, 46x26 feet, slate roof, oak and tile floors, metal lath, steam heat, electric light, tile and marble work. Architects ready for sub-bids.

Bank, Sellersville, Pa. Architects, Tilghman H. Moyer, 824 Hamilton street, Allentown, Pa. Owners, Sellersville National Bank, Dr. C. D. Fietz, on premises. Brick, steel, 1 story, 71x31 feet, built-up asbestos roof, terrazzo floors, steam heat, electric light, hollow tile, metal lath, tile, marble and terrazzo work, steel grill, architectural terra cotta, vault, ornamental iron wrok. Architects taking sub-bids.

Residences (6), Seventy-third street and West Chester pike, Upper Darby, Delaware County, Pa. Architect, Jesse L. Stetler, 1484 North Fifty-second street, Philadelphia. Owners, Home Builders' Co., 1482 North Fifty-second street, Philadelphia. Stone, frame and stucco, 2½ stories, 24x30 feet each, shingle roof, hardwood floors, hot water heat, electric light, tile work. Owner taking sub-bids.

Stores (2) and Apartments (2), Brookline, Delaware County, Pa. Architect, Jesse L. Stetler, 1484 North Fifty-second street, Philadelphia. Owner, George Graeney, 5524 Media street, Philadelphia. Brick, 2 stories, 33x60 feet, slag roof, oak floors, hot water heat, electric light, tile work. Owner taking sub-bids.

Residence, Bethlehem, Pa. Architect, E. R. Bitting, Odd Fellows' Building, Bethlehem, Pa. Owner, A. B. Turner, 633 Prospect avenue, Bethlehem, Pa. Brick, 2½ stories, 32x22 feet, tile roof, hardwood floors, hot air heat, electric light, tile work. Owner taking sub-bids.

Residence (alts. and add.), Radnor, Pa. Architect, Louis H. Rush, 34 South Seventeenth street, Philadelphia. Owner, H. C. Higgins, Radnor, Pa. (Heating, plumbing, oak floors reserved), brick, concrete work, steel, tile and marble work, plastering, iron work, painting, glazing. Architect taking revised bids due August 4th.

Pennsylvania Contracts Awarded

Junior Hih School, Ardmore, Pa. Architects, Savery & Scheetz, Stephen Girard Building, Philadelphia. Owners, Lower Merion School Board, care of Mr. Hamilton, Merion Title & Trust Co., Ardmore, Pa. Brick, cut stone, steel, 2 stories and basement, 232x100 feet, slag roof, cork, tile, mastic, cement and maple floors, hand elevator, metal lath, tile and marble work, rolled steel skylights, bond, iron work, terra cotta. Contracts awarded to following low bidders: (General) Franklin M. Harris & Co., 1520 Parrish street, Philadelphia, $446,482. Heating, S. Faith & Co., 2427 Pennsylvania avenue, Philadelphia, $59,500. Plumbing, Thompson Brothers, 520 Buttonwood street, $23,273. Ventilating, S. Faith & Co., 2427 Pennsylvania avenue, $4,980. Electrical, Bryn Mawr Electrical Co., Bryn Mawr, $8,995.

Central High School (add.), Scranton, Pa. Architect, Edward Langley, Scranton Life Building, Scranton, Pa. Associate architects, Sprague & Siocum, 167 West Thirteenth street, New York. Brick, terra cotta, limestone and steel, (2) wings, 26x82 feet, 12x50 feet, composition and Spanish tile roof, concrete and maple floors, hollow tile, metal weather strips, waterproofing, floor hardener, bond, fire doors, kalamein doors, marble and terrazzo, metal lath. Contract awarded to Peter Stipp, Colfax and Pine streets, Scranton, Pa.

Residence, Cynwyd, Pa., $20,000. Architects, McIlvain & Roberts, Otis Building, Philadelphia. Owner, Clarence H. Vanderbeck, Cynwyd, Pa. Stone, 2½ stories, 64x24 feet, 1½ stories, 21x24 feet, shingle roof, oak, pine, and cement floors, iron work, bond, tile work, hot water heat, electric light. Contract awarded to John E. Kearney, 34 South Seventeenth street, Philadelphia.

Town Hall, Bridgeport, Pa., $26,700. Architect, Clyde S. Adams, 2038 Spruce street, Philadelphia. Owners, Borough of Bridgeport, William Kinsley, chairman of Building Committee, Bridgeport, Pa. Brick, steel, 3 stories, 45x100 feet, slate roof, maple floors, metal lath, iron work. Contract awarded to Kelly & Kinsella, Bridgeport, Pa.

Manufacturing Building, Bridgeport, Pa. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, James Lees & Son, Bridgeport, Pa. Reinforced concrete, steel and brick, 5 stories, 132x103 feet, slag roof, maple and cement floors, hollow tile, heating, lighting, safety treads, rolled steel and kalamein doors, bond, floor hardener, ornamental iron work, terra cotta. Contract awarded to J. S. Rogers Co., Drexel Building, Philadelphia.

Church and Sunday School, Trexlertown, Pa. Architects, Ritcher & Eiler, 147 North Fifth street, Reading, Pa. Owners, Union Lutheran Reformed Church, care of architects. Stone, 1 story and basement, 57½x130 feet ,slate and composition roof, hardwood floors, vapor heat, electric light, hollow tile. Contract awarded to E. F. Peters & Son, Allentown, Pa.

Residence and Garage, Noble, Pa., $20,000. Architect, John T. Brugger, 505 Chestnut street, Philadelphia. Owner, John T. Brugger, 505 Chestnut street, Philadelphia. Brick, 3 stories, 40x30 feet, slate roof, hardwood floors, metal lath, hot water heat, electric light, tile work. Contract awarded to Friel-McLeister, Inc., 2146 East Norris street.

Residence and Garage, Merion, Pa. Architects, Thomas, Martin & Kirkpatrick, Otis Building, Philadelphia. Owner, Odin Dorr, The Clinton Apartments, Tenth and Clinton streets, Philadelphia. Hollow tile and stucco, 2½ stories and 1½ stories, shingle roof, oak, pine and cement floors, hot water heat, electric light, tile work. Contract awarded to George W. Bottoms, Narberth, Pa.

Residence, Madison street, York, Pa. Architects, Hamme & Witman, City Bank Building, York, Pa. Owner, David Zwaifler, West Market street, York, Pa. Frame, 2½ stories, 30x45 feet, shingle roof, hardwood floors, stone foundations, vapor heat, electric light, tile work. Contract awarded to I. Reindollar & Son, 936 Linden street, York.

Residence and Garage, West Market street, York, Pa. Architects, Hamme & Witman, City Bank Building, York, Pa. Owner, S. G. Gotwalt, 15 South West street, York, Pa. Brick, 2 stories, 32x38 feet, garage, 1 story, 20x24 feet, tile roof, hardwood and concrete floors, vapor heat, electric light, tile and marble work. Contract awarded to J. Crist, York, Pa.

Road Work, Pennsylvania. Owners, State Highway Department, Harrisburg, Pa. Montour and Northumberland Counties, Route 2, Point Township, Northumberland County, and Mahoning Township and Danville Borough, Montour County, $151,328.20. Contract awarded to D. L. Risser, Lebanon, Pa.

Westmoreland County, Appli. 281, Lower Burrell Township, $13,504.50. Contract awarded to State Const. Co., New Kensington, Pa.

New Jersey Construction News

High School and Gymnasium, Collingswood, N. J. Architect, Paul A. Davis, 3rd, 1713 Sansom street, Philadelphia. Owners, School Board of Collingswood, N. J. Brick and limestone and steel, 3 stories and basement, 135x150 feet, gymnasium, 1 story and basement, 86x46 feet, slag roof, pine floors, steam heat, electric light, hollow tile, roof ventilators. Architect ready for bids.

Elks' Club, Fowler street, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, B. P. O. E., Lodge No. 114, Mr. F. Kinney, Trenton, N. J. Brick, steel, 2 stories, 60x80 feet, slag roof, maple floors hollow tile, metal lath, tile and marble work, steam heat, electric light, ornamental iron work. Architect ready for bids due August 4th.

Store (alts.), 18 North Broad street, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Carlton Clothes Store, care of architect. Structural steel, copper front, electric light, plate glass. Architect ready for bids due August 4th.

Main Building (add.), Camden, N. J. Architects, Morris & Erskine, 1716 Cherry street, Philadelphia. Owners, Cooper Hospital, Camden, N. J. Cut stone, brick, reinforced concrete and steel, 1 story, 39x56 feet, asbestos asphalt roof, cement floors (finished floors reserved), ornamental iron work. Architects taking bids due August 5th.

Warehouse, Baltic and Delaware avenues, Atlantic City, N. J. Architect, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Atlantic City R. R., U. G., Robinson, lessee, Atlantic City, N. J. Brick, terra cotta, 1 story, 100x157 feet, slag roof, yellow pine floors, hollow tile, steam heat, electric light, ornamental iron work. Architect taking bids due August 8th.

Moving Picture Theatre (alts. and add.), Pitman, N. J. Architects, Andrew J. Sauer & Co., Denckla Building, Philadelphia. Owners, Hunt's Theatres, Inc., 1220 Vine street, Philadelphia. Brick, stucco, steel, 1 story and balcony, 42x96 feet, slag roof, cement and yellow pine floors (heating reserved), electric light, tile, marble and terrazzo work, metal lath, roof ventilators, kalamein doors, waterproofing, bond, ornamental iron work. Architects taking bids due August 7th.

New Jersey Contracts Awarded

Store and Apartments, Broadway and Benson street, Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, Dr. J. Lynn Mahaffey, 408 Cooper street, Camden, N. J. Brick, cut stone, steel, 3 stories, 57x38 feet, slag roof, composition, pine, oak and cement floors, roof ventilators, steam heat, electric light, metal lath, tin covered doors, bond, iron work. Contract awarded to John M. Yardley, 1716 Sansom street, Philadelphia.

Dairy Building (alts. and add.), 1415 Baltic avenue, Atlantic City. Architect, William H.

Timm, Perry Building, Philadelphia. Owners, Abbott's Alderney Dairies, Atlantic City, N. J. Carpentry, mill work, painting, plumbing (heating and lighting extensions), bond, iron fence. Contract awarded to M. B. Markland, Guarantee Trust Building, Atlantic City, N. J.

Store and Warehouse (add.), Trenton, N. J. Architect, William Kleman, First National Bank Building, Trenton, N. J. Owners, Hurley-Tobin Co., 118 North Broad street, Trenton, N. J. Brick, 4 stories, 40x100 feet, slag roof, hardwood floors, hollow tile, freight elevators, electric light, metal lath, rolled steel sash. Contract awarded to J. H. Morris, South Broad and Hudson streets, Trenton, N. J.

Store Building, 1142 Broadway, Camden, N. J. Architect, private plans. Owner, Sigmund Jacobson, 1140 Broadway, Camden, N. J. Brick, limestone, 1 story, 12x80 feet, slag roof, maple floors, tile and marble work, plate glass, ornamental iron work. Contract awarded to Potts Brothers & Cooperson, 129 North Eleventh street, Philadelphia.

Chancel and Boiler House, Pacific and Kentucky avenues, Atlantic City. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, Church of the Ascension, Atlantic City, N. J. Brick, pre-castone and steel, 1 story and basement, 65x50 feet, slag and tile roof, pine floors, electric work, metal lath, bond, iron work. Contract awarded to Charles D. Thompson, Pleasantville, N. J.

Miscellaneous Construction News

Church and Sunday School, Dover, Del. Architects, Charles W. Bolton & Sons, Witherspoon Building, Philadelphia. Owners, Dover Presbyterian Church, care of Rev. J. Bursten, Dover, Del. Brick, 1 story. Sketches in progress.

(Continued from Page 488)

determination of what is safe, there is considerable difference of opinion; and a building code should not be the opinion of any one person as to what is safe, but should represent the best opinion and knowledge of those engaged in the building profession. If our codes are prepared on this basis, they cannot be unduly burdensome, because the best judgment of the building profession is a guide that can be considered both practical and reasonable.

In the past, the building business and building codes have been too much affected by men who have no exact knowledge of building construction, but who have had a great deal of experience and know that certain kind of construction is safe and who apply to their operations some rule of thumb regulations. Men of this type have left a very decided impress on the various codes in the country. This has happened in some cities because such persons were prominent in the building industry and in other cases because some cities wanting a building code have taken the work of some other city and copied it blindly, copying both good and bad regulations.

Scientific Knowledge Lacking in Past

The great difficulty with building codes has been the lack of exact or scientific knowledge regarding limitations of strength and fire resistance of materials and construction and also a lack of breadth of vision as to what codes should really do. Very happily, at the present time conditions are changing and a very valuable and important movement is under way to prepare a building code broad enough to cover the entire country.

As in the past the regulations of building codes have been based on the practical knowledge of rule of thumb builders and architects and not on exact scientific knowledge, it can be readily understood why it is that some of the regulations seem too severe, in that they require the use of too large an amount of material. If a practical builder under somewhat unfavorable conditions has had trouble with a wall eight inches in thickness, he will probably conclude that a 12-inch wall should be used and will advocate its use under all conditions. If this same practical builder was a person of greater education, he might be able to distinguish between the cases where the 8-inch wall and the 12-inch wall should be used. This example could be multiplied many times to illustrate the principle and show how some standards of construction have been formed.

Useless Requirements Hamper Building

At the time when these regulations were put into the code, because of the fact that the framers of codes were not broad visioned and far-seeing, the regulations were applicable to only a narrow field, although a broad field of operations were affeected by such regulations. The people who are responsible for the codes have undoubtedly done the best they could, but it is time that we stop for a minute to survey the conditions and find where are are. It is peculiarly necessary for us to do this at the present time, when there is a housing shortage, when building materials and labor are high in cost. If the building codes require more material to be used in the construction of buildings than is really desirable and necessary, this excess material and labor constitutes an economic loss or waste, which is very serious. It means that in some cases that some building operations, which under proper conditions would go ahead, will not be started; it means that the return from the investment in buildings will be decreased; it means that during a time when building costs are high and investors are timid, there will be more or less stagnation in building operations; it means that it will take a longer time to relieve housing shortage; and it means that the city in which there is the greatest amount of unnecessary material used will be handicapped as compared to a city where there is less economic loss. It is certainly true to say that business goes in the easiest channels; or putting it in other words, business goes to those cities where business can be conducted most economically. In a city where there is an excessive amount of money invested in buildings, the cost of doing business will be higher than in a city where buildings are cheaper, other things of couse being equal.

One of the great questions now before the world is reducing the large amount of economic loss or waste. In the matter of eliminating the unnecessary material that goes into the buildings, it can be readily seen that progress can only be made by men who have had proper scientific or engineering training. If all of the regulations of our codes are to be more or less arbitrarily cut down for the purpose of eliminating excess material, the result would be unfortunate because undoubtedly some structures erected under such revised codes would be dangerous and would collapse, causing a loss of life and property. If such revision is properly done by competent men who have the facilities for making proper tests before deciding to revise present-day standards, no such aforementioned bad results will follow. Unless this matter is taken up scientifically, any great change in the codes either would come about as a matter of evolution, which would occupy a considerable amount of time, or would involve a very considerable danger. No community could afford to have it known that its regulations were so loosely drawn that dangerous structures are permitted.

Government Should Prepare Code

The United States Government is particularly well fitted for scientifically examining the regulations of the building codes for the purpose of eliminating all unnecessary or useless material. The Government not only has in its service men qualified for scientific investigations, but also has testing laboratories. Besides this, any statement from the Government that a certain regulation (even though departing from present-day standards) was safe, would have the authority of the Government behind it and no reasonable person would dispute such findings.

It can readily be seen therefore, that the preparation of a national building code, as has been proposed by the Department of Commerce, will bring about a change in existing codes in the best and quickest manner possible. Another thing that will be accomplished by a national code will be the elimination of the large number of conflicting requirements in the codes of the different cities. In most codes there are some provisions that are general in character and are vey much the same in different cities. There are other

provisions that, although they should be the same in different cities and are really general regulations, are yet local in their character; that is to say, they have been introduced as the result of some local opinion or influence and do not reflect the general opinion of the building public of the country. I do not mean by the term "local regulation" that this term should apply to any regulations which are written in a code because of the peculiar topography of the ground surrounding such city or any similar reason.

The reason these local regulations or variations are bad is because there are many articles and materials used in building construction that are manufactured for use all over the country. Where a manufacturer, because of the differing requirements of different cities, must manufacture ten products where one should be enough, there is necessarily an increase in the cost of manufacturing and in the cost of the article to the public, which will require a greater amount of money to do business because the amount of materials carried in stock must be greater. This statement will apply not only to the manufacturer but to the jobber supplying several cities. It is certainly true that any considerable variation in the character or quality of manufactured articles, simply to comply with some building regulations, is not a good thing. There should be established some reasonable standards of quality and manufacture; and, when a manufacturer makes an article that complies with these standards, his material or articles should be acceptable anywhere in the Country.

In the matter of establishing standards for the Country as a whole, it must be admitted that where parts of a building are affected by climate, owing to the great variation in climatic conditions in different parts of the Country, it will be necessary to establish somewhat different standards. This can be done by dividing the Country into various climatic zones and by applying proper standards to each zone. There are many parts of a building, however, that are not affected by climate, and a standard good in one part of the Country should be good in all other parts.

Wiring and Steel Now Standardized

There are already certain regulations affecting building construction that have been thoroughly standardized. For instance, in the regulation of the electrical wiring installation in buildings, the set of rules prepared by the National Board of Fire Underwriters under the leading of the "National Electrical Code" has been generally adopted all over the Country as a basis for regulations. This has been done because of the excellence of the rules and not because of any merit of arrangement or wording; in fact, the arrangement of the rules is not good, and the wording is not well adapted for adoption into a municipal code.

The regulations governing the use of structural steel are very much the same throughout the Country, as the use of structural steel has been very generally standardized because the handbooks that have been printed and widely distributed by the structural steel manufacturers have been in general use for years.

If the cities of the Country have been so ready to accept and use well prepared standards in the case of electrical wiring and structural steel, it appears to me that there will undoubtedly be a similar willingness to adopt and use the regulations in a well prepared building code. The general rules set forth in such a code will have to be supplemented in the different cities by some local rules. For example, such as setting forth the boundaries of the fire limit district; those giving the waterfront regulations for cities situated on rivers and other bodies of water, etc.

Technical Bureau and Laboratory

I believe that a National code of this kind should be of the greatest benefit and of aid materially in eliminating unnecessary cost in building construction. In connection with such a code, undoubtedly there should be provided under Government jurisdiction a technical staff and testing laboratories for the investigation of new materials, new manufactured products and new methods of construction for the purpose of determining what consideration should be given to such materials, products and construction. In this way only can the building regulations of the cities be kept up to date. The Government has facilities for doing this kind of work and can do it better than can any municipality, and certainly the work should be considered as a very important part of the work of providing a national building code. If this is not done and this national building code is not revised from time to time, it will mean that a great many comunities, although they may adopt the national building code, in a very few years will have out of date codes, through blind adherence to the regulations of such national code and such a condition will lead to bad results.

The value of a national technical bureau with a testing laboratory will be particularly great also, because, in the testing of materials and building products which may be under consideration in any part of the country, the approval or disapproval of such material or produuts will be out of the range of local influence and will be performed by an independent Governmental department, which department will be impartial in its findings. This is as it should be. Too many times in the past have materials or products been approved or disapproved because of some local political influence. The building business is too large and important a business to be subject to the whims of political expediency. The value of a national building code will have another good feature in that any person building in one city, if familiar with building regulations, can go to another city with a very fair idea of what the regulations will be. At the present time owners and builders in going from one city to another find many conflicting regulations, and the knowledge obtained of building regulations in one city is of little value when applied to another city.

Code Needed at Once

In conclusion I will state that there is no doubt but that a national building code will be of the greatest service to officials of building departments, to architects, to contractors, manufacturers and the building public. It will go a long way towards silencing many of the complaints made against the unreasonableness of building regulations. It will make the work of the city officials easier. It will reduce cost of building to the public. It will tend to simplify and make easier the operations of architects and contractors. Taking it all in all, I can see no harm that will follow from such legislation and I can see great benefits; so I hope for the fullest success for those that are engaged in the work of preparing a national building code and for an early completion of their work.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

As The Editor Sees It

DETERMINING THE PROPER RELATIONS BETWEEN THE SEVERAL ELEMENTS IN THE CONSTRUCTION INDUSTRY

BY WALTER GORDON MERRITT, ATTORNEY, NEW YORK CITY

Address Delivered Before the American Construction Council, Washington, D. C., June 20, 1922

One of your prominent members has already complimented me by stating that he expects to disagree with everything I have to say. Undoubtedly he was referring to some of my known conflicts with the organized labor movement. Perhaps we should all remember that the organized labor movement is big enough to meet with and discuss with its critics and I hope I for one am big enough, in spite of the fact that I am one of its critics, to appreciate a great many of the values which lie in the activities and philosophy of the labor union movements.

I think your movement will be a success in spite of the fact that it was opened by a lawyer on the previous day and in spite of the fact that it was opened today by a lawyer. It does recognize after all that everybody has a great function to perform in connection with our Society.

Haywood Broome once remarked that when the silk worm told the sow that you couldn't make a silk thread out of a sow's ear, neither could you make a pork chop out of a silk worm.

Graham Wallace, the great social philosopher, has summarized one of our great problems by stating that a nation which does not learn co-operation must perish. Co-operation must take various forms. The lowest unit or rather the smallest unit is the family and the largest and most comprehensive unit is the state. But between those two units there must grow out of our complicated society with problems too numerous to be stopped by an interfering government, many other units of co-operation. We find them in the factories; we found them in the building trades industry and now we are learning that the methods of co-operation in the building trades industry have not yet been broad enough to handle the great problems which it has before it and that in spite of the existing units of co-operation it has fallen into many abysses which have brought it a very large amount of public discredit.

Men must unite to achieve that which they cannot achieve individually. This organization is a manifestation of the consciousness on the part of all interests contained in the building trades that co-operation must not only take place between each individual interest in the industry but that these different groups of different interests must learn to co-operate together in order that their interrelations may be properly solved upon a broad basis for the good of the public at large.

The relations between the architect and the contractor, the relations between the employer and the contractor, the relations between the engineers and the building industry, the relations to the Government, to railroads, and other relations which arise in the ordinary conduct of your problems must receive group attention, group consideration, if they are to be solved on a basis which will make your industry serve the public as it should serve the public.

Your task, in my judgment, is a very serious one, because between it and the complete attainment of its ideals there are many controversial questions of very serious moment which may be deferred for the time being but which in the end must be met and dealt with if we are ultimately to attain what we are seeking.

The character of the discussions which took place here yesterday, the character of the subjects which were assigned to the various speakers, show a vagueness and indefiniteness which is entirely desirable. If we were to specify too much in detail what we hope to attain we might find ourselves unduly circumscribing our work. We might find ourselves assuming the position of doctrinnaries, or we might, as the Irishman put it, disunite ourselves before we unite by the introduction of controversial subjects of a

DRAWING MATERIALS

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

very fundamental nature. We all have to recognize that there are some of these problems so serious that we must approach them as a good housewife approaches a bad egg.

My own thought is that this movement aims to secure everything which can be attained by co-operation without transcending the law and that nothing but experience will pick out for us the proper line and boundaries of each individual activity. We must go forward with a faith which I call the Democratic faith, the faith in people's capacity for self government; a faith in that human nature which leads us to believe that if we met together and reason together we will learn to think, feel, and act together. That in the larger outline represents the hope and purpose of this great movement. But I do think the time has arrived for us to be a little more concrete. Perhaps I have been placed here because, being unconnected with this movement and being but an observer and an outsider, if I make a misstep or say something which shouldn't be said I could be speedily disowned and the movement could go on harmoniously in spite of me. At least my endeavor is going to be to outline somewhat more definitely some of the concrete purposes of this organization and to make it possible to put in various pigeon holes, not for the purpose of forgetting or discarding, but for the purpose of proper consideration when the time arises, these various problems which this organization has got to meet.

So far as certain business aspects of this work are concerned we are sailing in smooth waters and have little to hear from controversy or dissension. Various matters which were enumerated by the Secretary of Commerce are matters we all recognize as within the field of the proper functions of this great organization.

The collection of statistics, which gives the people connected with its industries the information upon which they can formulate intelligent acts, is a function with which no one will quarrel. It is necessary that there should be statistics relative to pending building operations, relative to the production and consumption of commodities which are to be utilized in connection with the industry, and also with the supply of labor which is necessary for your operations. It is perfectly obvious that standardization may play a great part in connection with your work and as the Secretary of Commerce stated, may lead to the development of a nomenclature which will reduce frauds and confusions in the public mind in connection with contracts and the character of materials in use.

In connection with that work you have in back of you the Federal Trade Commission. In a case in which I was interested before the Supreme Court it has been held that one of the functions of the Federal Trade Commission is to put a stop to misbranding, to misleading words, in connection with the sale of merchandise. In connection with the silk association we have gone a long ways to prevent the use of the word "silk" in connection with merchandise which is not silk. This organization if it is met with similar problems to the use of words describing merchandise which words are not accurate words, will have the Federal Trade Commission behind it in the promotion of higher ethical standards in connection with the sale of merchandise.

So there you have two obvious functions at the outset relative to statistics, relative to standardization, may be worked out by this Association in a way which will be helpful to the industry and in a way which will meet with public condemnation.

No one has said anything about credit protection. I myself am not sufficiently familiar with the present machinery in your industry to know what can be done in that regard but I do feel that this organization should be ready to encourage, if not assist, the prosecution of credit frauds in connection with the industry and if there does not already exist such an agency to look after credit systems for the benefit of the industry as a whole.

Your relations to transportation have already been mentioned and of course a great institution like this, if it were to bring any case before the Interstate Commerce Commission, could exercise very much greater influence in promoting better relations with the railroads relative to rates and to securing fair treatment in connection with your transportation problems, all at a very much less expense than if one group in one part of the country were attempting to do that work.

There is also the co-operation with Government, whether the national, state or municipal, and you will know the many serious problems growing out of politics and growing out of governmental relations as a whole which meet in industry in connection with public contracts. The subject of legislation has not been mentioned specifically in this brochure which has been prepared but you undoubtedly will work out through your own vision and through your own experience many laws which will work for the better protection of the industry and for fair play between it and the public. Building codes must be amended in certain parts of the country. Bad practices of various kinds can be dealt with by legislation better than by the exercise of your own activities.

And last I might say there is that broader co-operation between yourself and the public. Much can be done, of

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Proposals

TREASURY DEPARTMENTN, Office of the Supervising Architect, Washington, D. C., August 4, 1922. Sealed Proposals will be opened in this office at 3 P. M., August 31, 1922, for remodeling and extension of kitchen and mess building, etc., and for construction of new ward units Nos. 1 and 2, and isolation ward and quarters for nurses and for attendants (except mechanical equipment) for the United States Marine Hospital at Baltimore, Md. Drawings and specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals,

firms, or corporations possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., July 28, 1922. Sealed Proposals will be opened in this office at 3 P. M., August 17, 1922, for the construction of approximately three and six-tenths miles of concrete road, including clearing and grading, culverts, etc., for the United States Veterans' Hospital, at Tuskegee, Ala. Drawings and specifications may be obtained from the Superintendent of Roads at Tuskegee, Ala., or at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms, or corporations possessing satisfactory financial and technical ability, equipment ,and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's office, Washington, D. C., Aug. 5, 1922.—Sealed proposals will be opened in this office at 3 P. M., Aug. 31, 1922, for the Mechanical Equipment of two new Ward Buildings, Isolation Unit, Nurses' Quarters, Attendants' Quarters, Kitchen and Mess Hall, Boiler House, Outside services, Plumbing, etc., in three present ward buildings and Administration building, etc., for the U. S. Marine Hospital, at Baltimore, Md. Drawings and specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individual firms, or corporations, possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., August 7. 1922.—Sealed Proposals will be opened in this office at 2 P. M., Aug. 28, 1922, for furnishing and installing fly screens in the buildings of the U. S. Public Health Service Hospital, at Augusta, Ga., in accordance with the specification and drawings listed in same, copies of which may be obtained from J. M. Geary, Superintendent of Construction at the hospital site, Augusta, Ga., or from this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 504)

course, to develop the sentiment of public's opinion relative to the building industry, its abuses and its problems and its embarrassments, or with a view perhaps of securing the co-operation of the public in meeting some of the various problems which you have.

Possibly in dealing with seasonal activity and reducing that to a minimum but at any rate no institution smaller than this, no one of the integral parts of this institution would be capable of carrying on any campaign of public education such as may be needed from time to time in connection with the construction problem. Perhaps we will develop a new word now and call you all constructionists just as we refer to other branches of the industry as industrialists.

Then there is the labor problem, which is far from being the least of your problems. There has been very little constructive effort in dealing with the labor problem in construction industries. Vocational training, proper regulation of apprentices, the control of the labor supply, these are all matters which cannot be worked out in an industry like this without co-operation between the employers and the unions organized in that industry and it does seem to me that there is great hope for constructive work along very broad lines which require the co-operation of all units to secure better results in this direction.

The same may be said of the question of unemployment. Also in respect to efficiency, a most abused word. I do not think there is any industry in the United States which has fallen lower on the subject of labor efficiency than the building industry, and I do not believe that when this organization with representatives of the unions dealing with it meet such problems face to face, that it will in the end find any great difficulty in meeting some of these problems of labor efficiency.

We all know that there are many jobs for which are paid handsomely to do little or no work and which must be revised if we are to save a large amount of economic waste for the benefit of the public.

The difficulty arises today because of the distrust and suspicion existing between the different units. If once you met constantly, not merely for the purpose of adjusting disputes but with a view to discussing these problems on a broader constructive line, there is little question, in my mind, but what this whole question of efficiency can be dealt with. If a plan can be worked out whereby the employees will feel assured that they will receive some of the extra pay which flows from extra efficiency and that such extra effort and extra efficiency means not merely putting money into the pockets of the employer but also means putting some of the money into the pockets of the employes, there should be no difficulty in securing some advancement in this direction.

Industry has accomplished great achievements in many directions, but it has not yet won its spurs in moral human relations. In the factories there are developing movements of a very promising nature looking for the joint co-operation and common council in connection with matters of mutual interests. The intra-factories council plan which now represents nearly a million employes has produced an amazing result in this direction. This industry has not the same opportunity because they are not brought together daily in the same building and under the same roof with the management the same group of employees whereby they can be dealt with and discussed with day after day relative to the duties and opportunities which are involved in the industry, but this movement must work out some method of common council and joint action relative to many of the crying needs of labor. It must have machinery for contact through representation on both sides, not only for the purpose of adjusting the disputes but for the purpose of working out broader constructive problems. The more intimate you can make the contact the less necessary will it be to lay down regulations inelastic, inflexible rules which are to apply under all circumstances.

For the two parties working side by side in the laying down of proper conditions of employment will be able to watch the abuses and thereby avoid the necessity of all regulative and restrictive standards. As I see the building trades industry at the present time the relations between employers and employees are simply that of period armistices and not relations of real co-operation and constructive effort. To meet that situation and place those relations upon a more durable basis this Council in the end must work out some more constructive plan for more continuous contact for a greater degree of common council and joint action in reaching the problems which are of mutual interest to employer and employee. As a lawyer it is very easy for me to throw that at you without any idea as to how it shall be done but nevertheless it must be done and you will not meet one of your greatest problems unless the broader vision which this movement exhibits does compensate itself upon the solution of that problem.

It also seems to me that this institution should attempt to erect some machinery for arbitration. I believe you should have a committee on arbitration, an official list of arbitrators, arbitration forms, and that men should be encouraged, whether they be employers or employees, buyers or sellers or contractors of any kind, to submit their difficulty to arbitration in order to avoid the cause and delay of litigation.

Should not we work towards a plan

whereby all contracts are made subject to the requirement that disputes should be arbitrated in accordance with the arbitration machinery of the American Construction Council?

I believe there is a great duty in that direction. In the Silk Association, of which I am counsel, practically every contract is taken with a clause of that character requiring arbitration in accordance with the rules of the Silk Association of America. The great sweep of the time is toward arbitration. You know the tribunal that has been set up in New York by some public spirited men to deal with arbitration. We know the new New York State statute places no limit whatsoever upon arbitration contracts and their enforceability.

This movement to be line with that tendency which is altogether good should undertake to establish a committee to work out that problem and encourage the settlement of disputes among yourselves by men who are familiar with the technical problems and the practical business standards as distinguished from the theoretical standards which control in your own particular industry.

The construction industry is a well organized industry. You do not need a new organization. You need co-operation between the organizations. The evils of the construction industry are the evils of organization and not the evils of the individual. The public's condemnation of the construction industry is the condemnation of certain practices which are incident and outgrowth of organization. Now we all believe in organizations. They are to play big parts in the reconstruction of America. We know from what I have said at the outset that methods of co-operation in this direction through voluntary associations which try to solve problems without the interference of government is all important, but in this industry we are confronted with the fact that you have organizations, in some respects being the most highly organized of all commercial activities, and that your difficulties are the outgrowth of those organizations. The reason for that, in my judgment, is that each organization has been pursuing its own narrow selfish policy without any regard to the policy of the industry as a whole. The reason for that is because the different organizations have not come together to mutually discuss their problems so as to dispose of them with a mutual regard to the problems of everybody else.

Now your institution is the kind to meet that particular issue, the issue of co-operation between these various organizations, each of which need much correction and reformation. (Applause).

As conditions have grown more complicated, as you have been threatened with legislative interference, as you have been frightened by a wave of public condemnation, you have come to appreciate that point of view and have gathered together all of these larger elements in the hope that the whole may be able to soften and restrain the abuses of each individual group.

It will be necessary for each group to lay down its code of practice, but that code of practice must pass muster with the American Construction Council, and each group if it is acting in good faith in furtherance of this great co-operative enterprise must be prepared to accept the judgment of the American Construction Council. The employers will to a large extent be influenced in their code by what the architect and the engineers and the employees say. The labor organizations must be influenced in the laying down of their code as to what the organization and the engineers and the contractors say. So that this great industrial opinion, this matter of developing a code, is going to be determined very largely by people who have not retained narrow selfish interests but people who have the larger vision for the good of the interests as a whole and of the public as a whole.

In that way we are going to get out of this slough of despond which is due entirely to the fact that each particular organization in the past has been pursuing is own narrow selfish policy without regard to the interests of all of the other organizations.

So I wish to say to you now by repetition: Do not forget, if you believe my diagnosis is correct, that your great function is that of a federation which must correct and reform the affiliated group in connection with many of their views and

This must be done largely by co-operation rather than by discipline. You cannot strike at the recalcitrant. There is a limit to what the law will permit you to do in the day of discipline. In this country individualism has the right of way. Collectionism has a great function to perform. As Mr. Gompers well said, "The function of collectionism is to furnish a larger opportunity for individualism" and that must be the test. I am using my own words now. That must be the test of sound collectionism.

If men persist in striking below the belt, if organizations persist in striking below the belt, there is a limit to what you can do to correct them. You cannot assume foreign power; you cannot interfere with the fundamental rights of anybody to assist and pursue his trade or conduct his business in this country. Your arsenal must contain in it only the weapons of education, common counsel and co-operation, with a discipline which must be exceedingly well thought out and must not conflict with legal restraints. You cannot dictate to men how they shall conduct their businesses. Men may unite to further liberty because that is one of the forms of government. Men may not unite to restrict liberty, because that is against the functions of government.

This great construction industry must be an open industry of open associations and of open activities. No group can regard its business as a private fraternity. Now this all bears on one of the greatest problems which you have before you and which is one of the most concrete problems to which I wish to refer and that is the problem of the jurisdictional dispute. I believe that jurisdictional dispute is wrong in principle and that many of the present labor leaders believe that, because it is a dog eat dog policy as between orthodox legitimate unions. A rate should be fixed for an operation and the employers should be free to employ on a union job any member of any union who is competent to do that work, provided the employer pays that rate. By bringing together all these interests that ideal may be attained. At least, it is one for which we should strive. It seems to me it is for the advantage of every single interest that that ideal should be attained and particularly for the advantage of the workers themselves.

If the journeyman on the job can, after he finishes one line of work, go on to another related line of work it is far better for him than to waste the time by going around to get a job on another building. If the journeyman on the job is permitted by the development of a broader craftsmanship which makes him skillful in more than one line of work, to be rewarded in those various lines of work he has developed into a bigger and a finer citizen and this element which we constantly refer to where a worker is regarded as but a cog in a wheel is reduced to a minimum. In other words, in the building industry I think we have a broader opportunity than we do in the ordinary factory industry of permitting a broader craftsmanship and of avoiding the monotony of detail where one man screws bolt No. 2 on a Ford automobile.

In my judgment this tendency, this opportunity, if exploited to its uttermost will make a happier and a better industry with less economic waste than the industry which we have at the present time.

(Continued Next Week)

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

As The Editor Sees It

DETERMINING THE PROPER RELATIONS BETWEEN THE SEVERAL ELEMENTS IN THE CONSTRUCTION INDUSTRY

(Continued from last week)

But let me also emphasize another phase of this same problem. In my judgment, as a lawyer, you cannot legally lay down a rule that a sheet metal door shall be erected throughout the United States by a member of the Sheet Metal Workers' Union and in so doing you are committing an illegal act. You cannot lay down the rule that throughout this vast land of ours the million men who will compose this organization can lay down the rule that no doors shall be purchased and no doors shall be erected except they are under terms and stipulations providing for that erection by a member of the Sheet Metal Workers' Union and as soon as you try that, you will be subjecting yourself to legal challenge.

So the line of constructive effort lies with the line of truly lawful effort. You can lay down the rule that there shall be no organized interference with any employer or union man in performing any work which the two agree that worker is competent to perform. In other words, the jurisdictional dispute should not be a legitimate subject of industrial warfare, and there is no interest in any of the elements if once they thoroughly canvass this thing with the larger outlook for laying down such a rule.

I hope that all interests connected with this American Construction Council will in the end be able to lay the ax at the root of this abuse by common consent of everybody that it redounds to the disadvantage of everybody.

One of the foremost complaints against the building trades industry concerns the restrictive, exclusive and monopolistic agreement on the part of contractors and workers, which restricts competition in men and materials and lays the foundation on which such evils as extortionate prices, blackmail, graft and other evils which have been heralded to the public, thrive. If you can change that foundation, those evils will disappear. If you do not change that foundation it is difficult for me to see when I understand the weaknesses of human nature, how those evils are going to disappear. Until you admit those evils, until you discuss them, and seek to remedy them, you cannot win and you do not deserve to win the confidence of the public, because that is the great outstanding price of the industry at the present time. You cannot cope with them through your institutions and you will have to cope with them through the law.

One of the greatest evils in your industry today, as I understand it, and hope you will all agree with me, is bargaining with corruptionists, for fear that any attempt to uncover corruptionists will lead to embarrassment in the future conduct of that particular system.

And nobody here has said a word about it since we have gathered. Nobody here has suggested how we are going to meet it, but we have got to meet it. We have got to devise machinery and aim to purge our own minds and prosecute and exterminate corruptionist, whether he be the supervisor on the job, the labor agitator or the combination which fixes prices, and until this organization heralds to the public that that is one of the primary purposes of this organization, that it proposes to clean house as to these abuses which aroused public condemnation, it cannot forward with the amount of public enthusiasm and sanction it so sincerely desires.

We have talked about disciplining the nonconformists. I have heard that from various people but the first person to discipline is the violator of law, the violator of the principles of common honesty and until we develop a respect for law and respect for common honesty it can best be developed by prosecuting people who indulge in these practices and thereby bringing up an industrial opinion and general public opinion which will elevate the whole standard of the industry we cannot expect to attain what should be one of the foremost objects of this organization.

This institution as a projected move-

BLUE PRINTS

ment has my most hearty approval. It is a step in the right direction. Whether it will take the right course or the wrong course, nobody can say, but if it makes clear to the public that it seeks to eradicate the abuses and evils of this industry, not only for the purpose of improving the opportunities of each and every one of us within the industry, it cannot hope to revive that prosperity which we all seek to have revived and cannot hope to re-establish itself in public approval.

BUILDING COSTS refuse to "stay put." An extensive eastern trip by one of the editors showed that nearly everywhere building now costs more than it did last fall, or in the early spring. Well-posted builders in Cleveland, Ohio, said costs had increased there in the past few months 25 to 30 per cent. They said each new material bill shows some advances, while union wage scales have come to mean little in most of the skilled trades. Good workmen are hard to get and the wages they obtain from sorely pressed contractors and builders correspond. In the outlying parts and suburbs of New York City it was said a plasterer easily made $20 per day. In Newark, N. J., a negro was recently arrested in morning hours for speeding his automobile. Brought to a police station he produced a huge roll of greenbacks and deposited $25 cash bail, jumped into his car and speeded away. want to be late for work.
He said he was a hod carrier and didn't

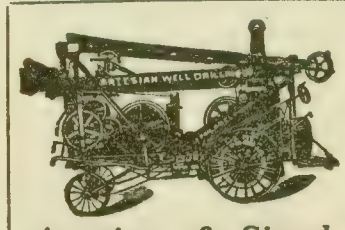
This increase in costs is apparently the result of several factors, the most important of which is the great demand for houses and small buildings of all kinds. Operations of this kind are generally not as expeditiously nor as efficiently handled as larger jobs, and require more laborers in the aggregate than the same amount of larger construction. Also there is not the same control of costs as in business buildings. The continuance of the strikes of the coal miners and the railway employees is having a very appreciable effect on prices of building materials and will have more effect as the season advances. It is freely predicted that a car shortage of the same character as existed in the fall of 1920 is now a certainty. The Associated General Contractors of America, and many other organizations and agencies interested in promoting building, are urging that all possible shipments of materials be made immediately, and that cars be promptly unloaded.

Contractors and builders should plan their work ahead for the next few months so as to avoid so far as possible expensive delays for want of necessary materials later on. Co-operation with local dealers and with building material producers is very essential, if the building needs of various local communities are going to be adequately taken care of. Every indication points to a year of record construction, provided building material needs can be taken care of before the expected transportation pinch occurs. June construction contracts for the country as a whole were appreciably less than in the record-breaking early spring months, but in this respect 1922 does not differ from other years. It merely means that work on contracts let in March and April is now in full swing and it is difficult for contractors and builders to take on any more. On the other hand, building permits increased.

Chicago Situation

Building permits issued in the city of Chicago for the *six months* from January 1 to July 1 totaled nearly $112,000,000, which is a larger figure than any previous total for a *whole year,* by over $1,500,000! "The figures are a striking proof of what can be accomplished when building is unhampered by strikes, extortion, and restrictions upon the use of building materials," said F. W. Armstrong, general manager of the citizens committee to enforce the Landis award.

An analysis of contracts reported let between May 10 and July 7 showed the committee contractors to be winning 82 per cent. of all work costing $25,000 or over. The figures were, Landis award contractors $25,328,000; non-Landis contractors $5,485,000.



"A peculiar feature of the statistics," said Mr. Armstrong, "is the steady drop in the activities of the so-called speculative builders who have been operating heavily in the apartment building field with the idea of making quick and profitable sales as soon as a building is completed."

The Citizens committee celebrated the Fourth of July by passing the 15,000 mark in the mechanics placed in the Landis award army. The exact number of mechanics placed to July 5 in the thirteen "outlaw" trades was 15,073, of which 5,881 wer carpenters, 2,308, laborers, and 2,027 painters.

Recently the terrazzo mechanics, inspired by the amount of work in sight, struck for an increase of 10 cents an hour and the substitution of a new contract for the one given them by Judge Landis. The contractors appealed to the committee. After several conferences, a number of terrazzo mechanics were brought in from outside cities and crews were organized. The union heard of it and underwent a change of heart regarding the extra ten cents. The organization, meanwhile, had been placed on the open-shop list because of the strike, so the men went back to work in an individual

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Brick, 1 and 2 stories, 38x160 feet, Spanish tile, maple floors, hollow tile, roof ventilators, waterproofing and dampproofing (hot air heat, electric light and plumbing reserved). Owners will take bids in ten days.

School and Auditorium, Newmanstown, Pa. Architect, H. Mauer, 226 Fifth street, Reading, Pa. Owners, Mill Creek School District, Lebanon County, Pa., Regis Chauvenet, secretary, Newmanstown ,Pa. Brick, 2 stories, 70x100 feet, slag roof, maple floors, metal lath, rolled steel sash (hot air or steam heat, electric light, plumbing reserved). Owner will take bids.

Store and Apartments, 26 Southeastern street, Glenside, Pa. Architect, I. W. Levin, Victory Building, Philadelphia. Owners, Glenside Fruit & Produce Co., on premises. Brick, 3 stories, 18x75 feet, slag and slate roof, oak and pine floors, hot water heat, electric light, plumbing, tile and marble work, metal ceilings, bulks (flush). Owners will be read yfor bids in one week.

Residence (alts. and add.), Rosemont, Pa. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owners, George H. McFadden, Jr., 121 Chestnut street, Philadelphia. Brick, cut stone and steel, 3 stories, 77x60 feet, slate, tile and slag roof, cement and oak floors, metal window guards, ornamental iron work, bond, tile and marble work, warm air heating (electric wiring, fixtures and hardware reserved). Architect taking bids due August 22nd.

Store and Apartment (alts.), 504 North Penn street, Reading, Pa. Architect, C. Young, 226 North Sixth street, Reading, Pa. Owner, E. O. Emerick, on premises. Plate glass, copper work, hardwood floors, roof ventilators, tile, marble work, rolled steel skylights, general interior alterations. Plans in progress.

Shop Building, Muhlenberg Townshsip, Berks County, Pa. Architects, Muhlenberg Brothers, 511 Penn street, Reading, Pa. Owners, Bauman Iron Works, Muhlenberg Townshsip, Berks County, Pa. Brick and steel, 1 story, 56x126 feet, composition roof, electric light, rolled steel sash. Architects taking bids due August 17th.

Bungalow, Springfield, Pa. Architect, private plans. Owner, Samuel Smith, Springfield, Pa. Stone and stucco, 1½ stories, 27x24 feet, asbestos roof, hardwood floors, hot water heat, electric light, tile work. Owners taking bids due as soon as possible.

Residence, Ardmore, Pa. Architect, John Charles Norton, Ardmore, Pa. Owner, Farry H. Francis, Ardmore, Pa. Stone and plaster, 2½ stories, 20x30 feet, shingle roof, hardwood floors, hot water heat, electric light. Architect taking bids due as soon as possible.

Bank and Office Building, Chester, Pa. Architect, not yet selected. Owners, Cambridge Trust Co., Chester, Pa. Stone, brick and steel. Work contemplated. (4 stories.)

Store and Auditorium, Bywood road and West Chester pike, Upper Darby, Pa. Architects, William Steele & Sons Co., 1600 Arch street, Philadelphia. Owner, Terrence Smith, care of architect. Brick and steel, 2 stories and basement, 60x100 feet. Plans in progress.

Office Building, Centre Square, Lancaster, Pa. Architect, not yet selected. Owners, Conestoga Traction Co., Conestoga Building, Lancaster, Pa. Brick, steel and concrete, 14 stories, steam heat, electric lighting, tile and marble work, elevators. Work contemplated.

Residence, Swarthmore, Pa. Architect, John J. Carroll, 34 South Seventeenth street, Philadelphia. Owner, name withheld. Stone, 2½ stories, 25x43 feet, wing 10x27 feet, slate roof, oak floors, hot air heat, electric light, tile work. Plans in progress. Architect will be ready for bids in one week.

Residence, Milton, Pa. Architect, William H. Lee, 32 South Seventeenth street, Philadelphia. Owner, Cary E. Hecht, Milton, Pa. Frame and stucco, 2½ stories, 40x30 feet, shsingle roof, hardwood floors, hot water heat, electric light, tile work. Owner is taking bids.

Warehouse, Hazleton, Pa. Architect, Calvin Young, 226 North Sixth street, Reading, Pa. Owners, Hazleton Wholesale Grocery Co., on premises. Brick, mill construction, 2 stories, 40x76 feet, slag roof, concrete floors, electric light, rolled steel sash. Architect has received bids.

Church, Greensburg, Pa. Architects, Charles L. Bolton & Son, Witherspoon Building, Philadelphia. Owners, Third Reformed Church, Greensburg, Pa. Brick, 1 story, 80x41 feet, slate roof, tile and marble. Plans in progress.

eRcreation Pavilion, Lansdowne, Pa. Architect, Paul A. Monaghan, 1218 Chestnut street, Philadelphia. Owners, St. Vincent's Home, Lansdowne, Pa. Brick, steel and concrete, 2 stories, 59x135 feet, slate roof, cement, pine and maple floors, electric light, metal lath. Architect has received bids.

Obstetrical Building, Williamsport, Pa. Architects, Stearns & Woodnutt, Stephen Girard Building, Philadelphia. Owners, Williamsport Hospital, care of architects. Stone, brick and steel, will contain 50 beds, steam heat, electric light, metal lath, tile and marble work, elevators, concrete floors. Plans in progress. Address all communications to architects for further information.

Pennsylvania Contracts Awarded

Residence, Penfield, Pa. Architect, Walter K. Durham, 323 Walnut street. Owner, George M. Webb, 1200 Widener Building, Philadelphia. Frame and clapboard and stucco, 2½ stories, 26x33 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to Suburban Const. Co., Wyncote, Pa.

School, West York, Pa. Architects, Hamme & Whitman, City Bank Building, York, Pa. Owners, West York School Board, H. W. Lauer, secretary, West York, Pa. Brick, 2 stories, 4 rooms, slate roof, hardwood floors, steam heat, electric light. Contract awarded to C. A. Boyer & Son, York, Pa.

Residence, College avenue, Haverford, Pa. Architects, Bunting & Shrigley, 603 Chestnut street, Philadelphia. Owner, name withheld. Stone, 2½ stories, 44x27 feet, wing 18x13 feet, shingle roof, oak and pine floors, metal lath, tile work, bond, iron work. Contract awarded to H. P. Wolfe Co., Bryn Mawr, Pa.

Print Shop (alts. and add.), 30 North Sixth street, Reading, Pa. Architect, Earl Hickman, 119 South Fifth street, Reading, Pa. Owner, Fred Woerner, 32 North Sixth street, Reading, Pa. Brick, 1 story, 31x41 feet, composition roof, factory floors, steam heat, electric light, rolled steel skylights. Contractawarded to H. J. Raudenbush, 1324 Perk avenue, Reading.

Residence (alts. and add.), Shamokin, Pa. Architect, William H. Lee, 32 South Seventeenth streeet, Philadelphia. Owner, J. H. Glass, Shamokin, Pa. Brick, 2½ stories, 30x42 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to Shamokin Lumber & Const. Co., Shamokin, Pa.

Residence, Highland Park, Pa. Architect, private plans. Owner, Miss Beatrice Greaves, Highland Park, Pa. Brick, 2½ stories, shingle roof, oak floors, hot water heat, electric light, tile work. Contract awarded to Merion Const. Co., 2313 Walnut street, Philadelphia.

Residence, Bryn Mawr, Pa. Architect, private plans. Owner, Mrs. Charles De Mange, Bryn Mawr, Pa. Brick and frame, 2½ stories, 32x36 feet, shingle roof, hardwood floors, electric light, hot water heat, tile work. Contract awarded to Merion Const. Co., 2313 Walnut street.

Residence (alts. and add.), Radnor, Pa., $8,000. Architect, Louis H. Rush, 34 South Seventeenth street, Philadelphia. Owner, H. C. Higgins, Radnor, Pa. (Heating, plumbing, oak floors reserved.) Brick, concrete work, steel work, tile and marble, plastering, iron work, painting. Contract awarded to H. E. Grau Co., 1707 Sansom street, Philadelphia.

Building, Cheyney, Pa. Architects, Morris & Srskine, 1716 Cherry street, Philadelphia. Owners, Home for Destitute Colored Children, care of architects. Brick, stone and steel, 2½ stories, 51x17 feet, wings 34x23 feet and 13x26 feet, slate roof, asphalt and pine floors (plumbing, heating, electric work reserved), metal lath, rolled steel sash, bond, iron work and stairs. Contract awarded to R. C. Ballinger Co., 918 Walnut street, Philadelphia.

Residence, Chelten Hills, Pa. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owner, Esther Heacock, care of architects. Frame, 2½ stories, 25x38 feet, shingle roof, pine floors, hot air heat, electric light, tile work. Contract awarded to Harry Murphy, Willow Grove, Pa.

Rectory (demolition and rebuilding), 322 South Fifth street, Reading, Pa. Architects, High & Huber, North Fifth street, Reading, Pa. Owners, St. Peter's Roman Catholic Church, Rev. Kierman, on premises. Brick,

3 stories, 51x83 feet, slag roof, hardwood floors, steam heat, electric light, tile work, marble work. Contract awarded to Charles Schlegel, Mt. Penn, Pa.

Residence, Reading, Pa. Architect, G. C. Freeman, 24 North Sixth street, Reading, Pa. Owner, Warren Adams, St. Lawrence, Pa. Brick, 2½ stories, 30x40 feet, slate roof, hardwood floors, hot water heat, electric light. Contract awarded to Charles Schlegel, 2250 Perkiomen avenue, Reading, Pa.

Residence, Washington and Mulberry streets, Reading, Pa. Architect, Earl Hickman, 119 Southt Fifth street, Reading, Pa. Owner, S. R. Smith, 1 South Ninth street, Reading, Pa. Brick, 2½ stories, 14x52 feet, tile roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to A. E. Spengler, 917 Mulberry street, Reading, Pa.

Bank (alts. and add.), Hamburg, Pa. Architects, Muhlenberg Brothers, 511 Penn street, Reading, Pa. Owners, Hamburg Saving & Trust Co., care of architect. Brick, structural steel, 91 feet 6 inches x 50 feet, composition roof, cement and cork tile floors, steam heat, electric light, hollow tile, bond, tile and marble work, terra cotta, iron work. Contract awarded to Sharp Const. Co., 22 North Fifth street, Reading.

Church, Mountainville, Pa. Architect, Ritcher & Eiler, Sixth and Court streets, Reading, Pa. Owners, Trinity Memorial Lutheran Church, care of architect. Brick, 1 story and basement, 39x90 feet, slag roof, hardwood floors, hollow tile, vapor heat, electric light, structural metal work, dampproofing. Contract awarded to Allen Leibensperger, Fullerton, Pa.

Residence, Reading, Pa. Architects, Muhlenberg Brothers, 511 Penn street, Reading, Pa. Owner, H. Eckert, Reading Boulevard, Reading, Pa. Brick, 3 stories, 43½x41 feet, shingle roof, oak floors, hot air heat, electric light, tile, marble work. Contract awarded to Daniel Hunter, 820 North Eleventh street, Reading, Pa.

Garage and Service Station, Shamokin, Pa. Architect, William H. Lee, 32 South Seventeenth street, Philadelphia. Owner, I. K. Wetzel, Shamokin, Pa. Brick, hollow tile, concrete and steel, 2 stories, 80x120 feet, built-up asbestos roof, cement and maple floors, steam heat, electric light, (1) freight elevator and dumb waiter, rolled steel sash and skylights. Contract awarded to Shamokin Lumber & Const. Co., Shamokin, Pa.

Men's Dormitory Group, State College, Pa. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Pennsylvania State College, State College, Pa. Brick, cut stone and steel, 4 stories, 106x42 feet, slate roof, cement, oak and pine floors, metal ceilings, waterproofing, terra cotta, bond, fire and kalamein doors, metal lath, tile and terrazzo work. Contract awarded to F. B. Boyer Co., Tyrone, Pa.

Residence (alts. and add.), Penllyn, Pa. Architects, Willing, Sims & Talbutt, 1627 Sansom street, Philadelphia. Owner, Charles E. Ingersoll, Penllyn, Pa. Hollow tile and plaster, 2½ stories, 19x37 feet, slag and shingle roof, oak and pine floors, hollow tile, bond, iron work. Contract awarded to Amos W. Walton, Ambler, Pa.

Stores (4), Apartments (8), Eighth and Edgemont streets, Chester, Pa. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Lincoln Republic Life Insurance Co., Eighth and Edgemont streets, Chester, Pa. Brick, 3 stories, 42x134 feet, slag roof, hardwood and pine floors, hot water heat, electric light, tile and marble work, metal lath, flush bulks. Contract awarded to R. H. Scroggins, Chester, Pa.

Bank, Stores and Office Building, Tyrone, Pa. Architect, George S. Idell, 1705 Chestnut street, Philadelphia. Owners, Farmers' & Merchants' Bank, Tyrone, Pa. Stone, brick and steel, 5 stories, 100x60 feet, slag roof, hardwood floors, pine and cement floors, hollow tile, roof ventilators, metal window guards, bronze, tile and marble work (plumbing, heating, electric work, elevators and vaults separate bids). General contract awarded to H. A. Moore & Co., Inc., Milton, Pa.

New Jersey Construction News

New Hotel Clarion, Kentucky avenue and Beach, Atlantic City, N. J. Architect, Wm. Macy Stanton, 1524 Chestnut street, Philadelphia. Owner, S. K. Boniface, Atlantic City, N. J. Brick, stone and reinforced concrete, 6 sories, 69¾x40 feet 10 inches, shingle, composition and tin roof, cement, tile and oak floors, elevators, hollow tile, terra cotta, ornamental iron work, flush bulks, metal lath, tile work, steam heat (lighting reserved). Architects taking bids, due August 28th.

Theatre, Wildwood, N. J. Architects, Andrew J. Sauer Co., Denckla Building, Philadelphia. Owners, Hunt's Theatres, Inc., 1324 Vine street, Philadelphia. Preliminary plans in progress. Too early for details.

Comfort Station, Trenton, N. J. Architect, R. G. Connolloy, Commonwealth Building, Trenton, N. J. Owners, City of Trenton, Mr. Page, chairman, City Hall, Trenton, N. J. Brick, 1 story, 45x16 feet, tile roof and floors, electric light. Owners taking bids.

Club House, Millville, N. J. Architect, Robt. W. Pollock, 1802 Chestnut street, Philadelphia. Owners, Millville, Women's Club, care of Mrs. Samuel Sheldon, Millville, N. J. Brick, hollow tile and stucco, 2 stories, 30x90 feet, slate roof, pine floors, hot water heat, electric light, tile work. Architect taking bids, due August 27th.

Apartment House, 105 Victoria avenue, Atlantic City, N. J. Architect, Bertram Ireland, GGuarantee Trust Building, Atlantic City, N. J. Owner, H. G. Harrison & Co., Atlantic City, N. J. Architects taking bids, due as soon as possible.

Residence, Atlantic City, N. J. Architect, Howard A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owner, Nathan Schwart, Atlantic City, N. J. Hollow tile and stucco, 2½ stories, slate roof, hardwood floors, hot water heat, electric lighting, tile work. Architect taking bids, due as soon as possible.

Sanitary Sewage System and Disposal Plant, Township of Haddon, Camden County, N. J. Engineers, Remington & Vosbury, Sixth and Market streets, Camden, N. J. Owners, Township Committee of Haddon, County of Camden, Richard Griffith, Township Clerk, Fire Hall, Westmont, N. J. Electrically equipped sewage pumping station and disposal plant and 250 miles of 5″ to 10″ terra cotta pipe sewers. Owners taking bids, due August 22nd at 8 P. M., D. S. Plans may be seen at Fire Hall or engineers' offices. Deposit $10.00, refund $5.00.

Apartment House, Asbury Park, N. J. Architects, Durham Bros., 1609 Sansom street, Philadelphia. Owner, Capt. Wm. H. Johnson, 1507 Sixth avenue, Asbury Park, N. J. Hollow tile and stucco, 3 stories, 80x41 feet, slag and tile roof, hardwood floors, concrete and cement work, iron stairs, ornamental iron work, metal lath, tile work, hot water heating, electric lighting. Owner is taking subbids.

Power Plant, Blackwood, N. J. Architect, private plans. Owners, Board of Chosen Freeholders, County of Camden, Fred W. George, Clerk, Court House, Camden, N. J. Lowest bidders: Item 1, furnishing and installing steel pressure filter, American Water Softener Co., Fourth and Lehigh avenue, Philadelphia, $2,260; Item 2, two boilers, Naschold & Riddell, Stephen Girard Building, Philadelphia, $9,847; Item 3, building and construction of power house, Fred Lango, Audubon, N. J., $17,251; Item 4, furnishing and installing piping, Marshall & Brown, Lafayette Building, Philadelphia, $22,300.

New Jersey Contracts Awarded

School (alts.), Ohio avenue, Atlantic City, N. J. Architect, Bertram Ireland, Atlantic City, N. J. Coal bunker and ash pit. Contract awarded to Lam Building Co., 1001 Wood street, Philadelphia.

School (alts.), Indiana avenue, tlantic City, N. J. Architect, Bertram Ireland, Atlantic City, N. J. Owners, Board of Education, Atlantic City, N. J. Coal bunker and floor supports. Contract awarded to Lam Building Co., 1001 Wood street, Philadelphia.

Residence, Wenonah, N. J. Architects, Morris & Erksine, 1716 Cherry street, Philadelphia. Owner, Oscar D. Ogden, Wenonah, N. J. Frame, 2½ stories, 24x50 feet, asbestos shingle roof, oak and pine floors, hot water heat, electric light. Contract awarded to Neilson & Carlson, Wenonah, N. J.

Miscellaneous Construction News

High School, Smyrna, Del. Architect, private plans. Owners, Board of Education, Smyrna Special School District and Delaware School Auxiliary Association, DuPont Building, Wilmington, Del. Brick, steel and concrete, 1 and 2 stories, 150x80 feet, masonry, carpentry, steel and iron, roofing, painting (plumbing, gas fitting, heating and ventilating and electric ork separate bids). Owners taking bids, due September 5th at 11 A. M., D. S. Deposit $25.00, refund $25.00. Plans may be obtained from Room 8124 Du PPont Building, Wilmington, Del. Address owners, as above listed, care of W. O. Hoffecker, President of Symrna Board, or Dr. Joseph H. Odell, PPresident of Delaware Auxiliary.

Junior High School, Roanoke, Va., $200,000. Architect, H. Couroy Richards, 618 Chestnut street, Philadelphia. Owners, Board of Education, Roanoke, Va. Brick, stone and reinforced concrete, 2 stories and basement, slate roof, steam heat, electric lighting. Plans in progress. Architect will be ready for bids in six weeks.

Bank, Middleton, Md. Architect, Edw. Leber, Hay Building, York, Pa. Owners, Valley Savings Bank, Middleton, Md. Brick, granite or marble front, 1 story, 40x75 feet, tile roof, hardwood floors, hollow tile, electric light, tile, marble and ornamental iron work, water and dampproofing, bank fixtuhes. Contract awarded to L. C. Culler, Frederick, Md.

Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., August 8, 1922. Sealed Proposals will be opened in this office at 3 P. M., September 5, 1922, for the construction, including mechanical equipment, of a Garage Building for the U. S. Public Health Service Hospital, The Bronx, New York City, N. Y., in strict accordance with the specification and drawings listed in same, which may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy

completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 520)

capacity side by side with the men who had come in from out of town.

On July 20, the national officers of the building trades unions outlawed by the citizens committee met in Chicago, to reestablish if possible closed-shop conditions. The conference is headed by John Donlin, president of the building trades department of the American Federation of Labor.

This conference recommended two days later that the Chicago Building Trades Council be reorganized and the various unions "outlawed" by the citizens' committee sign contracts with the employers under the terms of the Landis award.

Unless the eleven open-shop unions abide by the recommendations they must forfeit their charters from the American Federation of Labor. These unions are the plumbers, sheet metal workers, hoisting engineers, cement finishers, composition roofers, slate and tile roofers, fixture hangers, lathers, glaziers, laborers and terrazzo laborers.

The painters' union is not in the list instructed to abide by the Landis award. When former Judge Landis was appointed arbiter in the building trades dispute on wages the contract of the painters hadn't expired and they didn't participate in the original arbitration proceedings.

Boston, Mass., contractors recently returned to closed-shop conditions, after over a year of turmoil, but not on unqualified union terms.—*National Builder.*

Out of the multiplicity of detail printed daily about railroad and coal strikes, certain facts stand in illuminated importance. One which sizes up above all others is that when a basic industry ceases to operate normally and thereby jeopardizes the welfare of the major portion of the nation, the government has to intervene. Less government in business is possible only when there is business. Serious contemplation of the fact that the government has to project itself into settlement of industrial dusputes even to the point of taking over a temporary basis the industry in question cannot but lead to the conclusion that eventual government ownership of certain basic industries is more than a mere possibility.

This conclusion is highly discomforting to business interests and business minds in this broader fertile land where individual initiative is a paramount characterstic. Discomfort does in nowise avert possibilities. Consider these few basic facts in railroad operation.

The Interstate Commerce Commission fixes rates. The Esch-Cummins Law fixes returns. The Railroad Labor Board has very lately been held by the highest court which has reviewed its powers to have the power to enforce its decisions and one of its powers is to adjust wages. Suppose that under these conditions the point should arise when it will be necessary for the government to draft men or by force to compel them to accept the mandates of the Raliroad Labor Board. This condition has not manifested itself to the present moment in the present strike because when the Railroad Labor Board handed down the contended wage cut it was held under the decision of Judge Page to have only advisory power and no enforcing power. Sooner or later the Supreme Court of the United States will be called upon to fix the status of the board.

Then will come the time when its mandates will have to be obeyed. This will mean but a short step toward more complete government control of the railroads, and a step nearer government ownership. Business must not blind itself to the fact that a very considerable vote for government ownership of basic industries can be polled at any time.

Happily there is a remedy, otherwise why scatter such pessimistic thought? The remedy lies in a new awakening of industry to the solving of its own problems.

That the railroad systems of the United States are in the plight they are in is due for the most part if not entirely to past mismanagement. The plight of the coal industry has been definitely pointed out time and time again to uneconomic conditions in the industry resulting in too many mines in operation and too much seasonal employment.

The plight of the whole United States in regard to labor relations is due to faulty management and faulty considerations of conditions in the past and the present time.

If the coal industry can solve its own problems, the government will be mighty glad to keep hands off. The remedy is action on the part of coal management.

Take the problem home to our own industry, and the remedy for most construction ills lies in action for more business methods upon the part of management.

The contractor belongs or has the privilege of belonging to many associations, all of which have as a basic purpose keeping him out of deep water and making for better business relations. Splendid. However, the first step as far as any unit of industry is concerned is in the individual business enterprise.

AN ACCURATE AND INFORMING SYSTEM OF COST ACCOUNTING WHICH WILL SHOW RESULTS IS THE FIRST REQUISITE. How can any contractor know whether or not he is giving his labor a fair wage in proportion to building costs unless he can show a division of his costs? Guessing in the dark is a past method of doing business. It isn't going to be safe to engage in such business under the conditions which the world is facing now. To do so is just as passe and ineffectual as making national tariff schedules from the standpoint of politics instead of by tariff commissions on non-partisanship basis.

LABOR IS GOING TO KEEP ON DEMANDING MORE AND MORE WITH NO THOUGHT OF FAIRNESS OF DEMANDS SO LONG AS INDUSTRY IN GENERAL DOES NOT PUT ITSELF ON SUCH A COST FINDING BASIS AS WILL ENABLE IT TO SHOW LABOR STATISTICIANS AND ECONOMISTS THAT LABOR GETS ALL THAT CAN BE FAIRLY GIVEN TO IT IN THE LIGHT OF KEEPING THE WHEELS OF INDUSTRY TURNING.

The look into the future which shows the vision of open shop is largely illusional. Labor will be better organized fifty years from now than it is now. Of course this is not saying much, because there is so much room for improvement. The wholesome effect of the open shop movement will be the resulting reorganization of unions—let us hope along better business lines than now.

The keynote of the whole industrial situation is that whereas we have guessed in the past, we must learn to use the yardstick. Instead of guessing a big enough profit so much can be lost and still some made, we must learn by cost accounting to know quite accurately just what profit can be made and then make it or lose.—*American Contractors.*

Had a little talk with a man who is going to put up a considerable aggregate of housing in the very near future. Asked him what his reaction to building costs was. He said building costs are still too high. Asked him about wages paid at present time. He said wages were not bothering him but decreased efficiency of the men was.

Decreased efficiency of the man is the thing we must find a remedy for. It is not the money wage per hour which is the real gauge which determines cost price. The determining factor is how much effort per dollar of wages is received.

Do everything possible to get labor out of the notion of loafing on the job and

of actual sabotage. Good advice? Yes. Hard to put in force? Yes. The hard problem is the problem which when solved brings the greatest return in money and in satisfaction. Who can solve the problem? Most likely the individual contractor.

Truth sometimes is lessened in effect by too much explanation, but we can not forbear to add a word or two to the truths set so tersely in the above paragraphs.

We are at the beginning of what may be a long period of fighting against high costs. While pre-war levels will never be reached, stlll there will probably be recessions along many lines, and there will be wage cuts from time to time. When a wage cut is made the effect of cost of production is largely lost, if the cut leads to much sullenness on the part of workers affected. Education to wage cuts is as important as is the cut itself. The "show me" spirit is typically American.—*American Contractor.*

COAL STRIKE SLOWS "PROSPERITY SPECIAL"

Will the shortage of coal, due to the protracted mine strike, prevent the increase in business activity which is scheduled for the Fall? This question is now absorbing the attention of industrial leaders and observers, according to *The Industrial Digest,* which bases its opinion on an examination of 1,000 trade and technical magazines and newspapers, covering every important industry.

"The economists and statisticians, whose profession is to find answers to those ever-present questions, says that manufacturing is increasing, prices are rising, and normal conditions are fast approaching," says the magazine. "Judging by past experience, the experts say that business is on the upswing, and that improvement may be expected to continue.

"This hopeful prospect has been held before business for many months. One overshadowing cloud—the coal strike—threatens to destroy the fairness of the prospect and put to shame the prophets of early prosperity. Since April 1, when the strike began, industry has been eating into its reserve of fuel, so that now the supply is so low that the Government is rationing out the new production of mines. The prospect of a coal shortage in the fall and winter has become serious; and how can prosperity return if the factories cannot get enough fuel to keep a full head of steam in the boilers?

"Every day that the strike continues the danger to the industrial revival grows greater. Even if the bituminous coal mines were reopened at full swing today the situation would be bad. It would be difficult, and perhaps impossible, to supply enough coal to take care of active industry. The mines could produce plenty of coal, but the railroads couldn't carry it. A reliable statistician estimated at the end of June that if the coal strike had stopped immediately, more than 900,000 cars of coal would have to be loaded each month for the rest of the year if the normal annual production were to be attained. This is very close to the maximum capacity possessed by the railroads under favorable conditions. Since that estimate was made the strike has continued for a month, and the number of coal cars available to the railroads has been reduced by the strike of the shopmen, who keep the cars in repair. Congestion is therefore inevitable, and a serious coal famine quite possible, even if the strike ends immediately.

"This black cloud, however, has not yet affected busines as reflected in the industrial statistics. The figures show that business is buoyant. Will this buoyancy be sufficient to overcome the handicap of the coal strike?

"According to the adjusted index of the volume of manufacture, prepared by the Harvard Economic Service, the upswing of industry so far has resisted all obstacles. According to these statistics and those prepared by other economic services, manufacturing activity is steadily increasing in a manner characteristic of upswings of the business cycle. The trend of commodity prices also has been upward. Until recently most experts predicted that the improvement would continue, but the fear is now expressed that the coal strike has spoiled an otherwise favorable situation and, has seriously delayed the 'prosperity special.'"

—*From the Industrial Digest.*

Payments for extra work should be made monthly on or before the tenth of the month following the month in which the extra work is performed. Extra work invoices should be paid in full, no percentage on same being retained by owner.

ASSOCIATION OF IRON AND STEEL ELECTRICIAL ENGINEERS' SIXTEENTH ANNUAL CONVENTION, SEPTEMBER 11TH to 15TH, 1922, CLEVELAND, OHIO

The engineers in the iron and steel industry will meet in convention during the week of September 11th to 15th, 1922, at Cleveland Public Hall, Cleveland, O., at which time there will be presented and discussed subjects dealing particularly with steel mill problems.

The papers have been written with a view of giving to the engineers as much practical data as is possible, feeling that this class of information is far more beneficial than the theoretical side when dealing with steel mill problems.

Some of those who will present and discuss the subjects are Dr. C. P. Steinmetz, Messrs. B. G. Lamme, W. Sykes, A. G. Witting, F. C. Watson, D. M. Petty, L. W. Heller, R. B. Gerhardt, D. B. Rushmore, J. B. Crane, E. R. Fish, R. M. Rush, R. E. Butler, F. Hodson, Prof. Edgar Kidwell, F. W. Cramer, A. R. Leavitt, E. T. Moore, R. H. Bauer, F. A. Wiley, L. F. Galbraith, R. S. Shoemaker.

A tentative list of the subjects to be presented is:

"Improvement in Efficiency of Electric Power Supply," "A Review of Steel Mill Electrification," "Boiler Practices of 1922," "Education" and "Safety," "The Gas Engine as a Prime Mover for Power Generation," "Steam Turbines," "Judging Combustion from Gas Analysis," "Electrification of the International Nickel Company's Works for Monel Metal," "Some Considerations in the Electrification of the Steel Plant Railroad Yard," "Power in the Iron and Steel Industry," "Control—Motor—Lighting and Crane Standardization," Electric Furnaces," "Electrical Developments in 1922," "Investigation of Insulators for Steel Mill Service."

In addition to the technical sessions, there will be an unusually attractive exhibition of apparatus of particular interest to the steel mill engineers.

This exhibit will cover approximately 30,000 square feet of floor space and will be held in the same hall as is the technical sessions.

Representatives from practically every steel mill in the United States are expected at this convention for it will interest practically every class of engineer, such as General Managers, General Superintendents, Department Superintendents, Chief Engineers, Steam Engineers, Electrical Engineers, Electrical Superintendents, Mechanical Engineers, Master Mechanics, Superintendents of Power, Engineers of Tests, Safety Engineers and Department Foremen.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

PROPOSED SAFETY CODE FOR THE STATE OF OHIO

1. The following requirements shall apply to the erection, construction, alteration, repairing, painting, cleaning, wrecking, removing of false work, pointing, moving of buildings or other structures, in so far as any or all of them are applicable.

Definitions

2. The words "shall" and "must" when used in this code are to be understood as mandatory and the word "should" as advisory.

3. *General Contractor.* The term "General Contractor shall refer to a contractor who contracts for a major portion or portions of work.

4. *Contractor.* The term "Contractor" shall refer to a contractor who has a contract from the owner or lessee.

5. *Subcontractor.* The term "Subcontractor" shall refer to a contractor who has a subcontract from a General Contractor or Contractor.

6. *Direct Work.* The term "Direct Work" shall refer to work being done by the owner, lessee, state or any of its political subdivisions.

7. *Employer.* The term "Employer" shall refer to the individual, firm or corportion that the employees are working for.

8. *Agent of the Employer.* The term "Agent of the Employer" shall refer to the Superintendent, when there is one on an operation, or to the Foreman on a job where there is no Superintendent.

9. *Substantial.* The term "Substantial" wherever used in this code shall be taken to mean constructed of such strength, of such material and of such workmanship that the object referred to will withstand all normal or reasonably expected wear, shock, usage and deterioration.

10. *Securely Fastened.* The term "Securely Fastened" wherever used in this code shall be taken to mean that the object or thing referred to shall be so secured in place that it cannot under normal or reasonably foreseen conditions or circumstances be accidently or unintentionally displaced, and that the object or thing referred to will be upheld and withstand such weight or shock as is reasonably expected from normal use, conditions or circumstances.

Factor of Safety. General

11. All staging, i. e., scaffolds, pole and suspended swinging staging, platforms, temporary floors, landings, ladders, runways, horses, trestles, outrigger scaffolds and inclines shall be of such construction as to furnish a factor of safety of not less than five (5) unless otherwise noted.

Toilet Conveniences and Drinking Water

12. Adequate and suitable toilet conveniences and drinking water shall be provided for the workmen on all operations covered by this code. Such toilet conveniences shall be as reasonably sanitary as local conditions will permit.

First Aid Equipment

13. Suitable first aid equipment shall be provided on all operations covered by this code, all such equipment shall reasonably conform to the size of operation and number of workmen employed.

Hammocks and Stretchers

14. Hammocks and stretchers should be provided on all larger operations to properly handle injured workmen.

Discipline

15. Discipline means intelligent co-operation. Employees should have proper regard for the safety of others. Horse plays and practical jokes should not be permitted. It is advisable to discharge careless or quarrelsome persons and the dare-devil.

16. Where there is a hazard in connection with his employment each employee shall use the safety devices furnished by the employer.

Excavating and Ditching
(Other than Railroad, Highway or Channel Cuts)

17. Sheet piling and shoring shall be provided to protect workment where there is danger of falling dirt, walls, etc.

18. Particular attention should be given to shoring and sheet piling. Be guided by subsoil conditions. Don't take chances.

19. Runways for teams, truck and shovels must be built strong enough to carry the load. Hard usage necessitates frequent inspection.

20. Machinery or material should not

DRAWING MATERIALS

BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

BLUE PRINTS

be piled too closely to the edge of excavations.

Explosives

21. Sufficient warning shall be given before a charge is exploded.

22. Blasting caps or electric fuses must not be transported with high explosives.

23. Danger signs shall be posted whereever explosive substances are stored.

List of Explosives

Acetylene Gas
Natural Gas
Misc. Commercial Gases
Dynamite, etc.
Fuel Oil
Gasoline
Naptha
Benzol
Alcohol
Kerosene
Illuminating Gas

Wrecking

24. Platforms, guard rails and fences must be erected to protect the public and workmen from hazard.

25. Glazed sash shall be removed at start of operations.

26. Enclosed chutes shall be used, but in no case shall inclined chutes have a run of more than two floors without baffles. End of chutes shall be provided with stop or shutter; such stops to be closed when not in use.

27. Danger signs should be posted at the discharge end of all chutes.

28. Section of walls shall not be allowed to fall in mass on unsupported floors of building being wrecked.

29. When chimneys or large sections of a wall are pulled down in masses, the necessary precautions shall be taken to prevent persons from entering the field of danger.

30. Care shall be taken not to overload floors with material.

31. Wreckage, rubbish and material must not be stored upon the floors of the building, but must be removed at the earliest possible moment, unless the floors are properly supported.

32. Walls and chimneys should not be left in such condition that they may be overturned by wind, built-in-beams or other force.

33. Scaffolds used on walls should be self-supporting, especially on fire damaged buildings.

34. Dust shall be kept at a minimum.

Hoists and Derricks

35. Towers shall be constructed of sound material of ample strength to carry the load. Towers shall be properly guyed and anchored.

36. Towers under course of construction should be provided with adequate temporary guy lines.

37. When the hoist engine is placed close to the building, adequate overhead protection shall be provided for the engineer.

38. Exposed gears shall be guarded.

39. Enclosed switches and fuses shall be used.

40 Cables running from engine to hoist shall be enclosed or fenced off where there is danger of workmen coming in contact with cable.

41. All horizontal cables, less than 10 feet from the floor shall be suitably enclosed where there is danger of workmen coming in contact with the cable.

42. Derricks shall be strong enough to carry the load to be lifted.

43. Derricks shall be securely braced to prevent slipping and they shall be placed upon good foundations.

44. Derricks shall be properly and substantially anchored, especially the foot of the masts.

45. Back legs of stiff leg derricks shall be substantially fastened, preferably with double sets of bolts, or the back legs shall be adequately weighted.

45. Only experienced men should be employed in the erection of and taking down of towers.

47. Hoist platforms shall be constructed of sound materials sufficient to carry the load and to withstand the impact.

48. Landing platforms for outside material elevators shall be constructed as wide as or wider than conveyance or car used for material.

49. Workmen shall not be allowed to ride material hoists except when necessary to make repairs.

50. Workmen shall not be allowed to work in elevator shaft or on walls of shaft while elevator is in operation.

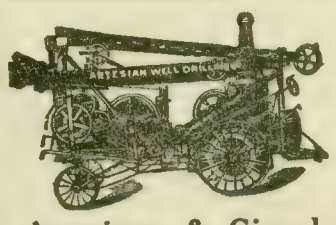
51. When elevator constructors or others are working in an elevator shaft, material, tools, or other objects shall not be hoisted or lowered in such shaft.

Elevator or Material Hoistway Openings

52. Where elevators and material hoistways are used in building under construction, temporary gates shall be provided not less than 6 feet high with members not more than two inches apart and six inches toe board. Such gates to be operated by counterweights or otherwise and shall be kept closed when opening is not in use.

53. Openings in elevator shafts where elevators are not in use when not protected by gates shall be boarded up. Temporary elevators must properly covered to protect operator.

54. All sides of elevator and hoistway openings in floors that are not used for loading and unloading shall be enclosed to a height of not less than six feet.



Handling Material

55. Material of all kinds must be piled or stored in an orderly manner and made safe so as not to fall over because of its own weight.

56. Spouting shall be well guyed so it can not be blown about by the wind or

Waterproofed with
Trus Con Waterproofing Paste

Trus Con Waterproofing Paste (Concentrated)

Is a scientific product, developed by our technical staff. It is used in practically all the large operations throughout the country. Mixed with the tempering water, it contributes powerful water repellent qualities, but does not weaken the concrete nor interfere with the normal development and setting of the cement.

Proposals

SEALED PROPOSALS

Notice is hereby given that sealed bids will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Feeholders of Camden County, and opened and read in public on Saturday, September 2nd, 1922, at 10 A. M. (daylight saving time) at a public hearing of said Committee to be held in the Freeholders' Room, in the Court House, Camden, N. J., for renovating, plaster patching, painting, etc., of Camden County Court House in accordance with specifications on file in the office of the Clerk, Court House (copies of which may be had by application at the office of Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia, Pa.)

Bids must be enclosed in sealed envelopes, bearing the name and address of bidder, and the words, "Bids on Court House Renovating, Etc.," and addressed to James F. Walton, Chairman Court House Committee.

Each bid must be accompanied by a certified check in a sum not less than ten per cent. of the bids submitted.

A surety bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also include in his bid a bid certificate from a surety company.

The Board of Chosen Freeholders reserve the right to reject any and all bids.

Dated, August 19, 1922.

JAMES F. WALTON,
Chairman Court House Committee.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

Many a man would do a better job if he didn't know about putty.—**Ex.**

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

(Continued from Page 536)

become dangerous to those working on other parts of the building.

57. Inclined runways should not be so steep that men will slip. When inclines are steep or wet, cleats should be nailed securely to the runway.

58. Runways to storage piles should have a substantial foundation, be sufficiently wide and the planks shall be securely nailed together.

Scaffolding and Staging

59. The word "stage" in the following paragraphs shall include any structures nailed together for temporary use to support men or materials of construction.

60. Staging shall be erected of sound material, be properly braced and uprights shall rest on substantial foundations or otherwise substantially secured.

61. Platform planks on all staging shall be of sufficient strength to provide a factor of safety of five. Platforms shall not be less than 20 inches wide. Unsupported ends of platform planks shall be railed off or planks shall be fastened to prevent tipping.

62. The use of Hemlock shall be prohibited.

63. Staging above the second floor shall be provided with suitable side screens securely fastened between the hand rail and toe board if there be danger to workmen below.

64. Care shall be exercised in splicing, bracing, spacing of ledgers, put-logs and bearers to maintain a factor of safety of five.

65. Outrigger scaffolds above the third floor shall be at least 30 inches wide.

66. Hooks, anchors and outriggers for swinging scaffolds shall be securely fastened.

67. When needle beams are used they shall be sufficiently strong to carry the load.

68. Outriggers for suspended or patent scaffold shall be sufficiently strong to carry the load and they shall be securely fastened to the frame, preferably by using clamps or U Bolts. Thrustouts should be steel though other suitable material may be used.

69. Stops shall be placed on the outside end of the outriggers.

70. When men are working above the staging and where there is danger of falling material, tools, etc., substantial overhead protection shall be provided to protect the men working on the staging.

71. Safe means of access to staging shall be provided.

72. All staging shall be properly braced or tied to prevent swaying.

73. All staging above the second floor shall be provided with substantially built guard rails and toe boards. This clause not to apply to horse platforms used on staging unless there is danger to men working on staging.

74. Runways over openings of 10 feet or greater in depth shall be provided with substantially built guard rails and toe boards.

75. Horse scaffolds shall be made of sound material and be well braced.

76. The use of ladders should be discouraged. If traffic is to be continued long periods of time, safety and economy will be obtained by the use of temporary stairways.

77. Where ladders are used they shall be substantially built, set level and well secured.

78. Oortable ladders should have non-slipping bases or be otherwise prevented from slipping and twisting.

79. Staging should be constructed by specially selected men who are experienced and competent to do this work. When completed, a thoroughly competent agent of the employer should inspect such staging before it is placed in service.

Barricades

80. On completed floors substantial railings and toe boards shall be erected around floor openings or openings shall be covered with temporary flooring.

Stairways

81. In all structures more than 60 feet in height where it is impractical to construct the permanent stairs as the structure progresses, temporary stairways of substantial construction shall be provided.
